FOR SALE: Machinery and Timber

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the town of Parry Sound, Ont.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Special bargains in the Townships of Burpee, Falconbridge and Street for small mills.

We have the following Sawmill Machinery for sale:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash Table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfe Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

All of the above open for inspection at Parry Sound.

The Parry Sound Lumber Co., Limited, 26 Ernest Ave. Toronto, Can.

Mason, Gordon & Co. 80 St. Francois Xavier Street, Montreal, Que.

Austin & Nicholson

Chapleau, Ontario

The Lumberman's Range

"An army moves on its stomach," said Napoleon, when emphasizing the necessity of food. Lumbering is impossible without hot food—And impossible, too, if you have constantly to be "tinkering with" your stove.

The "Driver's Joy" is a substantial wood-burning stove for hard usage—one of the many camp ranges we make. Note the sizes. Fire Box 24 in. long, 10 in. wide, 10 in. high. Top 38 in. x 28 in. Six 9-in. covers. Oven 24½ in. x 23½ in.

Send for catalog and prices.

Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

W. W. Cory,

Department of the Interior, Ottawa,
December 20th, 1912.

Deputy Minister.

JOHNS-MANVILLE SERVICE
COVERS THE CONTINENT

THE Johns-Manville policy of unquestionable Responsibility for the performance of its products in service is a policy without a reservation. It's a bona fide, straightforward "square deal." This policy is applied to J-M Roofings by our new "Roofing Registration" plan. *You* ought to know about this plan. It's a trade winner for you and a money saver for your customers.

J-M Regal Roofing
J-M Vise-Grip Cleats
—A Winning Combination

The one weak point of ready-to-lay roofing has always been the difficulty of making tight joints at the laps.

With the invention of J-M Vise-Grip Cleats this difficulty has been overcome, and the field for this product has been opened to unlimited possibilities.

Laps and Joints are now made watertight and the roofing is held against the boards with a continuous vise-like pressure. Warping and shrinkage of roof boards does not cause the roofing to pull away and leak as when the laps are fastened with nails and cement.

And the roofing! J-M Regal has proven itself the longest-lived and most satisfactory all-round "rubber type" roofing that can be produced. It is made of wool felt and genuine Trinidad Lake Asphalt in conjunction with other natural asphalts—a combination that assures the maximum of durability.

Inquire about J-M Roof Registration. Let us show you how to meet the demand for a durable ready roofing—and how to make money doing it.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 36 Toronto, January 1, 1916 No. 1

Portable Houses — Prompt Action Necessary

The meeting of the Canadian Timber Products Association which was held at Ottawa on December 14th showed that the members of the Association have been studying very closely the possibility of getting orders for portable houses in France and Belgium and that they have to a great extent already got into touch with the situation as it exists today. The results of the meeting, so far as resolutions were concerned, were a decision to send a representative to France to be followed possibly by a second representative a little later on; and a decision to donate the necessary work for producing two portable houses per member or 50 houses in all, providing the lumbermen in Ontario will give the necessary lumber and the other trades will give the balance of the material required, such as beaver board, roofing, etc. The idea of the meeting was that these houses should be produced without delay and sent over to France, and that a representative of the Association should also go to France at an early date to secure as large a share as possible of the portable house trade and of such other trade as the members of the Association can handle.

These results are encouraging. They show that the members are keenly alive to the importance of the situation and that they may be counted upon to make a strong effort to get a large share of this very important business. It is impossible to overestimate the importance of the portable house business. From the reports which have already come out we believe that almost any day now there will be enormous orders given for temporary houses for use in France. There is a great extent of country which at one time was in the hands of the Germans and is now being taken up again by the French families who formerly inhabited it. There is a strong movement on foot in France to assist these people in settling again on the land they once occupied and there is already a great demand for temporary houses. In fact, we believe that some of these houses have already been ordered, and regret to have heard of orders having been placed with firms in the United States. If the Canadians do not act immediately, it will be another case of "too late" and we will have scarcely a look in in one of the greatest sources of business arising out of the war.

Under these conditions not a single moment should be lost by Canadians. We fear, however, that valuable time is already being allowed to slip by. Since the meeting was held in Ottawa, extremely important developments have taken place which we are not at liberty to discuss just at present, but which may change the whole course of events so far as the making of a donation of portable houses is concerned; and we fear this change may involve a costly delay in the other feature of the matter, namely the sending of a representative to France. From a business point of view the donation of portable houses will be an important matter. We believe however, that the charitable and the business features of the situation should not be mingled in any way. What the Canadian Timber Products Association was formed for was to secure orders for portable houses in France, and there is only one way of doing this; that is to have a capable representative in France and to have him there at once. However important the new plan regarding the donation of portable houses may be and however great its bearing upon the business end of the Canadian Timber Products Association, delay in working out and completing the gift should have no effect whatever upon the sending of a man to France. We would like to see such a man sent forward immediately. We have no doubt that his presence in France would be the key to success in this matter and that the details of a gift of portable houses can be worked out in due time, without involving delay in the sending of a representative.

There will be many sources of business for the Association in France. Portable houses will be one of the largest of these, but others will be turning up all the time and unless the Association sends a man over at once we firmly believe that it will be missing great opportunities for securing the business for which it was organized.

Forest Fire Loss for 1915 — Ten Million Dollars

The Dominion of Canada suffered a loss of fully $10,000,000 through forest fires during 1915. It is obvious that destruction of such dimension cannot continue indefinitely. New growth does not equal more than a minor portion of the amount abandoned to smoke nor do the iniquitous effects of the 1915 fires end with an estimate of ten millions of cash. The burned areas of this year too often mean a second fire in a few months or years with the ultimate vicious consequences to the productivity of the soil and the ruin of young growth and seed trees. It is fair to say, therefore, that the estimated ten million dollars loss set down for 1915 is only the beginning of the bill chalked against the country.

That ten thousand forest fires occur every year in Canada, or over 1,400 a month between snow and snow, is an estimate based upon actual figures for the various provinces. Some of these fires are small and do little harm. Others denude large areas of magnificent growth.

Statistics regarding forest fire losses in Canada are complete only in relation to localities. So long as some of the provinces compile no estimate of their forest destruction annually, the total for the country may only be approximated. It is an unfortunate habit of some of those responsible for forest guarding to make their announcements in pleasant generalities, giving the public the idea that forest protection is amply looked after by perfected fire ranging systems, and requires no further public agitation and no radical housecleaning of official attitudes.

The plain fact is that a ten-million dollar annual loss in standing timber and young growth makes an excellent testimony to the half-

thoroughness of forest protection organizations in any and every part of Canada. No one will dispute that Quebec and British Columbia have made remarkable progress in building up forest-guarding systems, appointing conscientious overseers, and striking at the evil from every angle within their reach, but the fresh strength required for further rapid progress must to a large extent come from an awakened public. No minister, however determined, can plan and spend very far ahead of Public Opinion. And one must admit, in considering the forest legislation and administration of Ontario, Quebec and British Columbia, etc., that the departments dealing with forest matters in those provinces have proceeded probably faster than public sentiment urged.

A telegraphic despatch, dated Quebec, and appearing in many newspapers, makes the following statement:

"Throughout the Dominion last summer forest fires caused losses valued at no less than $9,536,867. The loss by forest fires is considerably lower this year than it was previously. Quebec province during the eight first months of 1915 lost through forest fires $2,254,-115, which is a good deal lower than the losses in Ontario, where, although the forest areas are considerably smaller than Quebec's, the losses by fire reach the figure of $3,694,823. British Columbia, with its vast forests, only lost $913,125, due largely to its forest fire-fighting organization. The small loss by forest fires in Quebec province is attributed to the protective measures employed by the government to prevent, fight and control fires."

In Ontario, Quebec and New Brunswick and British Columbia 85 per cent. of the losses were due to settlers' fires. Quebec and British Columbia have secured splendid results from their "permit" laws, by which all settlers are obliged to obtain the supervision of a forest ranger before setting out their clearing fires.

Ontario has no such law, and has suffered serious consequences, but the Minister of Lands, Forests and Mines has the problem under consideration, and may evolve an adequate remedy in the near future. New Brunswick has already made a good start in the regulation of settlers' fires, and will presumably spread the plan across the entire province.

Perhaps, the outstanding fact of the season's forest destruction is the absence of any serious loss along the lines of railway governed by the Dominion Board of Railway Commissioners and their forest protection regulations. Before the imposition of these laws, the Canadian railways were pointed out as the chief offenders in burning of forests. Now, however, the non-government lines under the Board's control are annually presenting a record of fire immunity which places them permanently among the minor causes of damage to the country's timber. As a matter of fact, only two or three fires of over ten acres in extent were attributed this year to those lines where the system of the Railway Commission has been put completely into effect. On two railways, of relatively small mileage, to which the board's regulations do not apply, no less than 200 fires were reported. Many of them were serious in extent, and at least 600,000 acres were burned over by fires due either to locomotives or men travelling along the right of way of these two roads and failing to take necessary precautions against fire.

Manitoba lost more than $1,000,000 in damage to mature timber and young growth in 1915. The total area burned over was 800,000 acres, according to official reports thus far received. Final reports will probably show an increased loss.

The fires in Manitoba took place mainly in the latter part of May and the early part of June, and were particularly destructive in the vicinity of the Hudson Bay Railway.

In the Province of Saskatchewan the most destructive fires took place during the same period as in Manitoba, but the fires were confined more to the areas under effective patrol, and the total distruction is not so great. The present figures indicate a total burned area of about 160,000 acres, and a total damage of $170,000.

In the southern portion of Alberta there has been an exceptional amount of rain throughout the season, so that the fires reported from the region south of the Peace river country and Athabasca Landing are comparatively small in number, and covered only about 25,000 acres, on which the damage is estimated to be about $1.00 per acre.

In the valleys of the Peace river, the Lower Athabasca river and the Mackenzie river conditions have, on the other hand, been phenomenally dry, resulting in fires that have been more destructive than in many years previous. Probably not less than half a million acres were burned over. As a good deal of the country burned over is probably incapable of producing merchantable timber, the loss would not be over $200,000.

In British Columbia, the area patrolled by the Dominion rangers is confined to the railway belt. In the eastern portion of the belt rains occurred at fairly regular intervals, and while there was at several times considerable danger from fire, the ranger staff was able to cope with the situation effectively, with the exception of the month of August in the Lower Fraser valley, where several fires got beyond control. While 10,000 acres of logged-over land were burned, the fires were kept out of the merchantable timber, only 36 acres of which were burned.

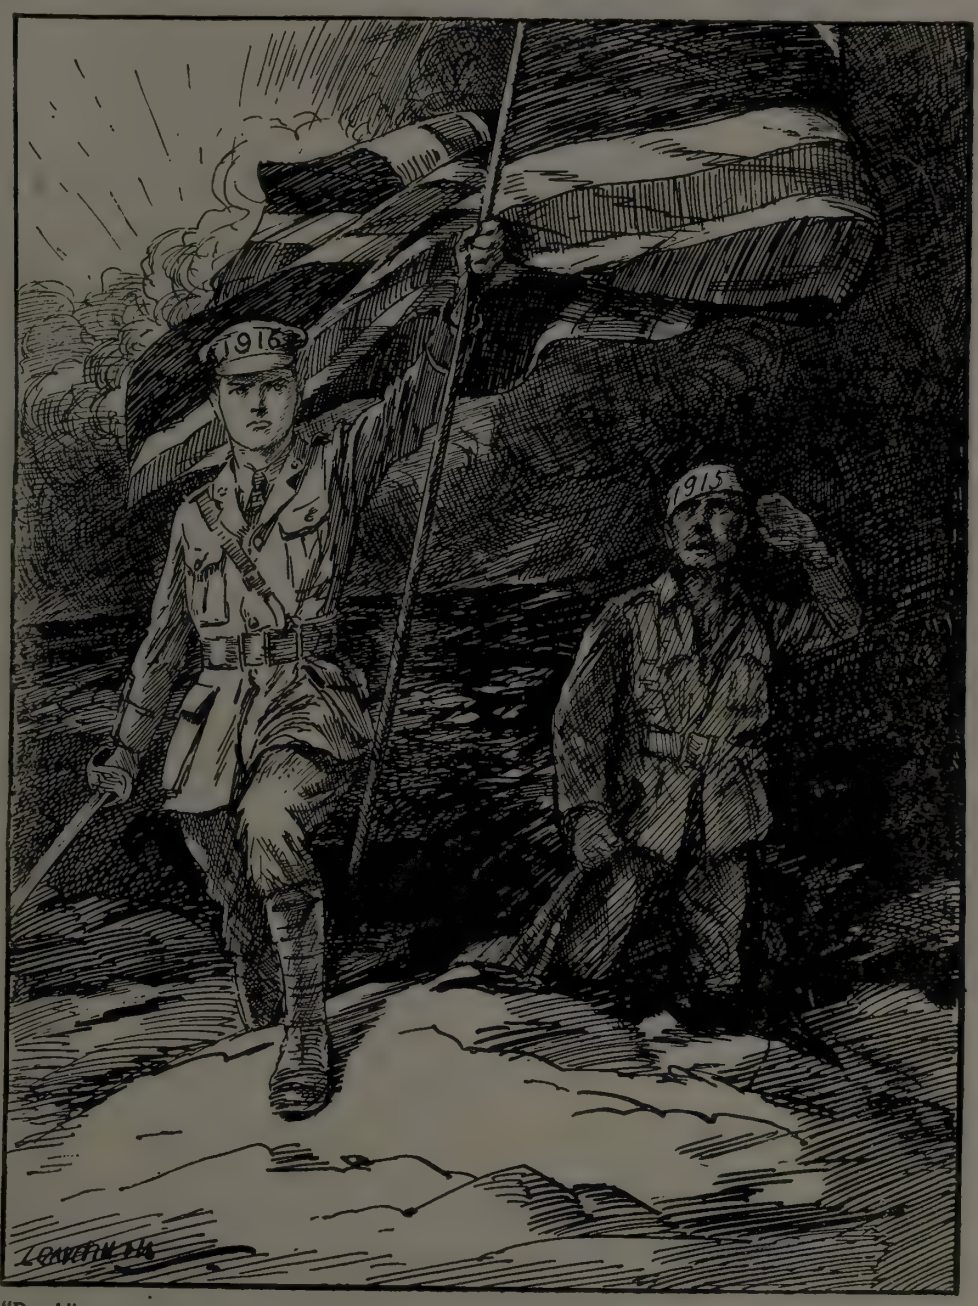
Canada's War Financing Programme

The address delivered by Hon. W. T. White, Minister of Finance, before the Toronto Board of Trade on December 16th, was like his previous address before the same body, one of exceptional importance. Mr. White dwelt particularly upon the methods of financing war purchases in Canada. The most significant fact which he brought out was that the war has greatly enlarged our conception of what is possible to us, as Canadians, in the way of financing our war expenditures and facilitating the financing of the war expenditures of Great Britain in Canada. Eighteen months ago, he said, any one who had stated that Canada could raise 250,000 men for overseas service and could float a war loan of 100 million dollars, would have been received with amused incredulity. The fact remained, however, that Canada had been discovering herself since the outbreak of the war. He then discussed in considerable detail the financing of Great Britain's purchases in Canada of shells, munitions and supplies, as well as similar purchases by the Allies. From enquiries, he had learned that the Shell Committee, or rather the Imperial Munitions Board needed, for the single month of December, 25 million dollars to pay for its purchases during that month. This was at the rate of about 300 million dollars per annum, and when Mr. Thomas, representative of the Imperial Government left Canada he mentioned the figure of 500 million dollars. Canada's 1915 revenue was a little over $150,000,000.

Discussing the means for raising the money for these purchases, Mr. White dwelt upon the course of exchange, which for a time—up to December, 1914—had been in favor of Great Britain, thus enabling her to pay for her purchases by means of exchange. The course of exchange, however, had altered early in 1914 until it reached a discount of from three to five per cent. from the point of view of Great Britain, thus putting an end to the feasibility of paying for purchases by means of sterling exchange. This had led to a consideration of the other methods available for financing the purchases of the Allied Powers in Canada, and in the United States. The two chief methods were by shipments of gold and by borrowings in the countries where the purchases were made. On account of the great demand upon shipping facilities, shipments of gold were also exceedingly costly and the question had resolved itself into one of borrowing in Canada and in the United States. The colossal character of the borrowings of Great Britain, France, Russia and Italy for war purposes were shown by the fact that their total exceeded 750 million dollars. The Anglo-French loan amounted to 500 million dollars. Great Britain and France had borrowed in the United States altogether 625 million dollars, and Russia and Italy 125 million dollars. It had been a condition of all these loans that the money so raised shall be expended in the United States. The importance of this fact was

that the ability to grant credit was the foundation of further credit. Canada also, by raising a loan for Great Britain had directly increased the volume of business that would be placed in Canada.

Canada had great reason to be pleased therefore, with the remarkable change in its financial situation, which enabled it to become a lending nation. It was of great importance to us that we should do all in our power to become a lending instead of a borrowing country. On this subject, Mr. White said:—"I do not know any other way for Canada to become a lending country than to save more money; produce more and save more; I do not know any way whereby an individual can save money and have it for investment, except by the old fashioned mode of living within his income and saving his profits to the extent that he can. I do not believe there is any magic method. If there is one put forward, prima facie I disbelieve in it. The way for Canada to become a lending country is for Canada to produce all she can and to save what she can and by production and saving Canada has been enabled to meet the vicissitudes of the past year as none of us ever expected she would be able to meet them, and by production and saving Canada will in time become a lending nation and be able to find the money for her own works and be able probably to do something more in the way of buying international securities. I pointed out a little while ago that the facility to extend credit obtained business. Not necessarily to extend full credit, but partial credit. Because, other things being equal—I am not speaking now particularly with regard to Great Britain, because Great Britain would desire to place as many orders in Canada as she could, but even from the British standpoint the matter is important—the ability to extend credit and help to finance purchases made on this side of the Atlantic, will secure the orders." Hon. Mr. White then discussed various methods in which Canada could help Great Britain and the Allies in financing their purchases. The chief suggestion he had to make along this line was that the firms and companies in Canada who are engaged in the manufacture of munitions for Great Britain might be willing to accept in payment a certain percentage in British Exchequer Bonds, maturing two, three or more years from now, so as to clear the period of the war. In this way they would, to that extent, be financing Great Britain's purchases in Canada and enabling her to get over the adverse exchange situation. Mr. White made this suggestion quite unofficially, but put it forward as a practical and not unlikely solution of the situation. Such a suggestion was an important evidence of the altered relations between Great Britain and Canada. "There is no doubt," Mr. White said," that the peril to which this war exposes the Empire, and the problems of this war, will lead to a very much closer organization of the whole Empire from a commercial and financial standpoint.



"Punch"

The British Empire, and Canada its most important unit, faces the new year with unimpaired vigor, uncountable resources, unshaken confidence and redoubled determination.

Mr. White's concluding remarks were eloquent and powerful. "I have no doubt," he said, "that when this war is over we will find the financial and the commercial resources of the Empire organized in a fashion that would have taken possibly generations to accomplish had the war not taken place. I said to you before and I say it now that I have an invincible belief in the continued integrity of the British Empire. Not only from the solid consideration of its material strength, which is by far the greatest in the world, but because as I have stated, the British Empire stands for ideals with which this world is not yet ready to part, and I believe, sir, that out of our dire experience in this war and the tragic suffering which every part of the Empire has been and is still undergoing, and is still to undergo, we shall develop an organization financial, commercial and political which will be adequate to cope with whatever responsibilities, whatever duties and whatever dangers the Empire may be called upon in the future to face."

Douglas Fir a Splendid Railroad Sleeper Material

Two Douglas fir and two red cedar railway ties were recently forwarded by the Forest Branch of the Department of Lands of British Columbia to the Great Eastern Railway Company of England, who selected two sleepers from their stock which they obtained from the Baltic, and tested them all under similar conditions. The results of these tests show beyond a doubt the superiority of British Columbia fir for railroad ties.

It was found that under compression Douglas fir will stand 5,695 pounds per square inch as against Baltic timber of 3,950 pounds per square inch; while red cedar made a very creditable showing against the Baltic timber of 3,407 pounds per square inch.

Tests in tension were even more favorable for Douglas fir. This is shown by the fact that it would take 11,450 pounds or over 5½ tons to pull apart a stick of Douglas fir having a cross section of one square inch; whereas just half that weight would suffice to pull apart Baltic timber, and only 3,300 pounds were required to separate cedar.

These tests were carried out by the Great Eastern Railway, and the results which they found will be of immense value to the reputation of Douglas fir as a railway tie material amongst English engineers. The importance of this is increased by the fact that English engineers have the supervision of most of the railway lines in China, India and South Africa, all of which are valuable markets for Douglas fir. The publicity work which is being carried out by the British Columbia Government to promote the use of its native timber products is bringing valuable results every day. It is based upon modern ideas in regard to reaching the consumer. There is great need for similar work by the other timber producing provinces of Canada and by the Dominion Government's Forestry Branch also.

Will Send a Representative to France

Canadian Timber Products Association Going After Portable House and Other Business Direct—Will Co-operate in Gift of Houses

The Canadian Timber Products Association, which has recently been formed with the object of promoting the export trade of Canada in manufactured wood products, and especially the probable trade in portable houses for France and Belgium, held an important meeting at Ottawa on December 14th. Mr. F. E. Parker of W. C. Edwards and Company Ltd., Ottawa, occupied the chair. A great deal of interesting discussion took place regarding the portable house situation, and the chief result of the meeting was the passing of a resolution to send to Paris, France, a representative of the Association, whose duties will be to get into close touch with the market for portable houses and other Canadian wood products and seek to work up trade for the Association. The resolution also contained provisions for sending a second man at a later date, if found advisable, who will be a practical estimator. With these two men on the scene in France, the Association will be in an excellent position for getting in touch with the market and quoting prices upon any orders which develop.

At present, the Association has 26 firms in its membership and 12 other firms are considering the advisability of joining. Of the 26 firms now belonging to the Association 22 have submitted reports of their daily output, the total of which is as follows:—Dressed or finished pine, spruce and hemlock lumber, including mouldings, 1,730,000 feet; hardwood flooring 328,000 feet; doors, 4,175 pieces; frames 3,805; sash, 10,650; columns, 100; blinds, (one firm) 400; portable houses (one firm) 30.

Another important result of the meeting was the passing of a resolution to the effect that each member of the Association would do the milling for one or two portable houses, free of charge, if the lumbermen of Ontario will contribute the lumber, and the other trades will contribute the balance of the material, such as beaver board, roofing, etc. This donation is in accordance with the request recently sent out by Hon. G. Howard Ferguson, Minister of Lands, Forests and Mines for Ontario, upon the suggestion of Sir Geo. Foster, that the lumbermen of Ontario should contribute lumber, the woodworking firms contribute the milling and the government attend to the transportation, so that a donation of portable houses may be sent to France.

According to reports received from lumbermen it is expected that they will readily co-operate by contributing lumber, and that at an early date a substantial donation of this nature will be shipped to France. The expectation is that these houses will be erected at Various points in France and that each of them will bear a small legend indicating that it has been presented by the lumber and woodworking interests of Ontario. The idea is that similar donations will be sent from the other important lumber producing provinces of Canada, and that possibly a hundred or perhaps more houses will thus be sent over free of charge, for the housing of people who have been deprived of their homes in northern France.

Plans of the portable house which the Ontario firms will present are published in this issue. The specifications of the portable house which have been worked out by the firm of Venne and Labelle, achitects, Montreal, P. Q., call for about 3,500 feet of lumber worked to special sizes. The house shown is 15 ft. 10 in. by 19 ft. 11 in. and contains three rooms, one 9 ft. 6 in. by 15 ft. 5 in.; and two 7 ft. 7 in. by 9 ft. 6 in., with a uniform height of storey 8 ft. The roof represents 395 square feet which will require about 450 feet of roofing paper or such other material as may be used. For ceiling and wall lining, whatever material is used the following quantities will be required:—For ceiling 292 square feet; for walls 481 square feet; for inside partitions 155 square feet on each side.

During the afternoon session of the meeting Sir George Foster was present and joined in an informal discussion of the whole situation. He stated that the best time for sending over these houses was the present; it could not be done too soon. A representative should also be sent over to Paris, he thought, at the same time as the houses are sent. The main features of the situation were plain enough. There had been an immense amount of the country devastated, part of which was now outside of the dominions occupied by the Teutons, and was now being filled in by refugees who were ill-cared for and almost unhoused, seeking their old homes or what remained of them. All through these districts in France, building propositions were now coming forward and in these districts temporary habitations would always precede more permanent ones. The temporary habitations would not be of brick, stone or iron. They would be cheap wooden shelter houses. Governments, societies and individuals were all taking a hand in connection with the repatriation of these refugees and the opportunity for business would be a wide one.

Just as soon as Canadian houses could be sent over to France as a practical exemplification of what Canadians can do to meet this demand, one or two of the smartest salesmen ought to be sent over to talk business. United States firms were following this same idea and were doing it more vigorously. This had been exemplified in case after case in the early days of the war. Many Canadians had come to him for assistance in getting contracts, and, while they were doing so, representatives of United States firms were already in Europe getting the business. Other Canadians had gone over to Europe on his recommendation and had come back with large contracts. Others were staying in Canada and not going after the business and few, if any of them, were getting any of it.

So far as credentials, introductions and government influence were concerned, the Dominion Government would do all it could to look after this end of the matter. The Allied powers were all specially sympathetic to Canada and would give preference to Canadian industries in all these matters. He advised the Canadian Timber Products Association to get into direct contact with the French Government, the Belgian Government and the Allies Commission in London.

Sir Geo. Foster mentioned the case of British Columbia as one proving the value of having a man upon the scene in Europe. Mr. H. R. MacMillan who had been sent over by the Dominion Department of Trade and Commerce had spent three or four months in England and France with the result that many cargoes of British Columbia lumber had been ordered for those countries. This had been the direct result of personal representation.

Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association was also present at the meeting upon a special request from the Association, and stated that while the Association had not yet taken any steps in regard to the question of sending a representative to Europe, this was a matter which he had very definitely in mind to bring up at the annual meeting of the Association on January 19th.

Mr. W. B. Bartram, of Bartram Bros., Ottawa, attended the meetings and in the course of a few remarks stated that he had been in close touch with the French market, having visited France personally since the outbreak of the war. He had found that the French people were ready to buy all the lumber that could be delivered from Canada. Price was not a factor. The demand was in excess of the supply, the only limitation to business in France at the present time being the scarcity of tonnage. He also reported that a portable house movement was under way in France at the present time, and he had just received a cable stating that a representative from France would call upon him in the near future in reference to this matter. Mr. Bartram added that he would immediately turn the French representative over to the Canadian Timber Products Association, when he arrived in Ottawa. He warned the Association, however, against the French middlemen. It would be very necessary to take precautions in regard to this or they would find that their transactions were heavily burdened with commissions.

Mr. A. J. Young of Sudbury, Ont., was selected by a special committee as the best man available to represent the Association in France. Mr. Young has had a wide experience of the planing mill business, is intimately associated with the lumber business and is also conversant with the French language. He is a successful business man with many important business interests. He advised the Association that he would like to accept the appointment, but would ask them to wait a short time until certain pending business affairs were settled. He would then know definitely whether he could represent the Association in France.

In connection with the proposed donation of portable houses to France it is interesting to note that the lumbermen of the province of New Brunswick are also taking steps along similar lines. Lumbermen, mill owners and woodworking factories throughout New Brunswick have received from Premier Clarke, as Minister of Lands and Mines, a circular letter similar to that sent out by Hon. G. Howard Ferguson in Ontario. Mr. Clarke asks that the lumber interests of the province do their share in furnishing a substantial gift of portable houses.

Since the above meeting was held an important development has commenced which may result in a much more comprehensive undertaking than that of presenting 50 portable houses. The new development is still in its early stages and we are not able to publish its details as yet. We hope, however, to be able to report upon it fully in our next issue.

Australian Trade Short of Vessels

Commissioner to United States points out a few pertinent facts regarding Pacific Coast exports.

Niel Nielson, Trade Commissioner to the United States for the government of New South Wales, Australia, in an address to The Douglas Fir Club of San Francisco recently gave a keen analysis of the lumber trade situation between the two countries. Much of what Mr. Nielsen said is of importance to lumber exporters in British Columbia, and with the substitution of "British Columbia" for "The United States," in many cases, his remarks can be taken to heart by Canadians.

Mr. Nielsen has been located in San Francisco for the past three years and a goodly portion of the increase in imports from and exports to Australia at this port are directly traceable to his efforts. These for the past four years, in nine-month periods, are as follows:

Imports to San Francisco Port from Australia

January 1st to September 30th

Year 1912	$ 539,603
Year 1913	996,436
Year 1914	2,043,239
Year 1915	6,497,037

Exports from San Francisco Port to Australia

January 1st to September 30th

Year 1912	$2,839,147
Year 1913	3,329,332
Year 1914	5,539,963
Year 1915	7,208,454

Mr. Nielsen said in part: My desire as a buyer is not take your lumber at less than the cost of its manufacture, but I have been forced into that position by the fact that the freight rates have been so excessive and the consumer whom I represent has had to pay not only the cost of the lumber but also these excessive freights, which have brought the C. I. F. price of lumber landed in my country far above the normal price.

Let me give you a word of encouragement. "So long as you produce Douglas fir lumber at what we in Australia consider a fair and reasonable price, so long will we be buyers and ever increasing buyers of your product."

The reason is that in this class of lumber you have a product that has two important qualifications in association, namely, lightness combined with extraordinary strength. We have no lumber in Australia that has this combination of qualifications to the extent that Douglas fir has.

We have stronger timbers and we have lighter timbers, but we have not in any one class of timber these two qualifications in combination to the extent that they are possessed by your Douglas fir.

We in Australia are the principal buyers of West Coast exported lumber. This will continue to a certain point, that point being where the price of your lumber landed in Australia is equal and perhaps a little greater than lumber produced in Australia that can be substituted for your product, and let me tell you, gentlemen, that point is nearly being reached at the present moment owing to the high cost of the carriage from this Coast to our country.

The lumber trade is undoubtedly on a very unstable basis, when the price can not be fixed either by the producer who manufacturers it nor by the consumer who uses it nor by any combined agreement between these two, but the price is arbitrarily fixed by the ship owner, who does nothing towards producing it, who does nothing towards increasing its value by consuming it, but who simply carries it from one side of the Pacific to the other.

Stability of trade is based upon two important factors. The first and most important is a "fair reciprocity of trade" and the second is "the ownership of the means of carrying the manufactured product to where it is to be consumed." A combination of these two factors will make trade absolutely stable and permanent; the absence of one of them may not altogether dislocate the trade, but the absence of them both might at any moment cut off the trade completely.

These factors of stability are altogether absent in the lumber trade between Australia and the West Coast of America, as they also are between this Coast and China.

You may think that your business ability is responsible for the lumber trade to Australia. If you do, do not deceive yourselves any longer.

The lumber trade between this Coast and Australia is largely accidental in its origin and it is based not upon a business foundation, not upon our needs on the one hand and your ability to supply them on the other, but on the ship owner's willingness to carry the commodity from you to us. It has taken the European war to show us this.

While the Pacific was full of lumber carrying boats, no one, neither the manufacturer or the consumer, worried their heads about the carrying portion of the trade; the ships were always there in normal times and we did not bother ourselves as to what flag they had at their mastheads.

But when the war made the carrying of stores and munitions in the Atlantic such a profitable business as it is today, the ships which we had depended upon at once left for those seas where most money was to be made.

As a matter of fact our lumber fleet, as we were pleased to call it, dwindled until it contained only those boats which were held in the Pacific Ocean because they were owned by the people living in the countries surrounding that ocean.

Speaking of the general problem of the Pacific shipping trade, I wish to give you a startling comparison, which accounts for the present alarming state of affairs in the carrying trade of this great ocean.

During the year immediately preceding the outbreak of the war the people of Australia bought from the United States of America a quantity of goods which required 218 ships aggregating 565,960 tons to carry them to our country.

Our trade with Germany required 219 ships, aggregating 743,632 tons to carry it.

Our trade with Japan necessitated the employment of 98 ships.

Now note the difference. Of the 219 boats carrying the German trade to Australia, every one was a German boat. Of the 98 boats carrying the Japanese trade, every one was Japanese. But of the 218 boats which carried the American trade, only 61 carried the American flag at the mizzen.

This explains the present high freights. Practically all the foreign owned boats which assisted you to transfer your commodities across the Pacific have deserted this ocean as soon as it paid them to do so and the only ones you have left in the lumber trade are those owned on this Coast and which have thus a strong reason for staying here.

What is going to happen to these as soon as freight rates return to their normal level? Can they stay under American registry and compete with the foreign-owned boats? I am afraid they can not.

You who know America so well, perhaps have never been in a position to compare the productive possibilities of your own country with that of others. Bring the map of the world into your mind's eye and then tell me where is there another great area of arable land within the temperate zone so well situated as is your great Mississippi basin? You have between the Rockies and the Appalachian Mountains from west to east and between the Great Lakes and the Gulf of Mexico from north to south, the greatest territory on earth of cereal-producing country, with reasonably easy access to the sea.

The only other country which has a greater area than this, of continuous arable land within the temperate zone, is Russia in its Asiatic possession, Siberia, but the greater part of this latter area is thousands of miles from the sea, while all but the far western portion of your great cereal area is within 1,000 miles of water carriage.

Nature has truly done well for the United States and it rests with you to use these opportuinties which are not possessed to as great a degree by any other country on earth to their greatest advantage.

You might say, is Australian trade worth going after when you have such a great home population to consume your products? I do not know what you think on this point, but I would like to tell you that the Australian people are the wealthiest on earth; they are also per capita the greatest buyers of foreign goods on earth. The average wealth of our people per unit is $2,030; our imports run to $86.75 per head of our population, and our exports to $88.25 per head of population, a total value of foreign trade per head of our population of $175.

Let me compare in another way our present value to your country as buyers of your products, which I hope is an indication of our much greater future value.

The United States Treasury Department has furnished me with the following figures, which are those for the year 1914:

Exports From the United States to

1.	United Kingdom	$ 594,271,863
2.	Germany	344,794,276
3.	Canada	344,716,981
4.	France	159,818,924
5.	Netherlands	112,215,673
6.	Italy	74,235,012
7.	Cuba	68,884,428
8.	**Australia**	**54,725,340**
9.	Japan	51,205,520
10.	Argentine	45,179,089
11.	Mexico	38,748,793
12.	Russian Empire	31,303,149
13.	Spain	30,387,569
14.	Brazil	29,963,914
15.	China	24,698,734
16.	Austria-Hungary	22,718,258

It will be seen by these figures that Australian trade is already worth more to the United States than that of any other Pacific coun-

try; that it is greater than that of Japan and very much greater than that of China; that it goes far beyond that of your best customer in South America, Argentina; that it is greater than that of Mexico, Russia, Spain, Brazil or Austria-Hungary, and is only beaten by five of the great European countries and by Canada and Cuba in the Western Hemisphere.

In view of these facts is it not essential that this trade be based upon permanence and stability? How can this be done? Only by making the carrying of your commodities sure in abnormal as well as in normal times. You have found by your recent experiences that the carrying of your commodities is the most important factor in the marketing of them.

All the lumber you can produce for the export trade and all the anxiety of the consumers in Australia and other countries to secure it for their use will not put a dollar in your pockets unless you have the ships to carry your product across the seas.

No country, not even your great Republic, can be wholly self-contained. It fully controls only that portion of its production which its own population requires and uses. As soon as local requirements have been fully met, the rest depends upon international distribution.

No branch of your trade rests more upon such distribution than does your lumber trade.

The foundation of the whole trade is ships and ships that will stay with the trade and not desert it for other waters.

There must be continual inducement for these ships to stay in the trade, such an inducement that even a world's war will not overcome. This can only be brought about by either filling the ships both ways by buying goods in bulk and value approximately equal to what you sell or if this can not be done the ships must be owned and controlled by either one or other of the countries concerned in the continuance and permanence of the trade.

If a proper and adequate reciprocity in trade does not exist or can not be brought about, then the country which holds the trade balance must in its own interest supply the ships.

For the lumber trade between Australia and the West Coast of America, the United States being the country having the trade balance in its favor, must own and control the ships to carry that trade or be always face to face with the prospect of its being cut off at any time or very seriously crippled, as it is at the present moment.

Our people in Australia are principally primary producers and primary producers principally along special lines. Our distance from the markets of the world is so great that we have become specialists even in primary production and we must produce commodities that are very valuable in proportion to their weight.

That is why our principal products are wool, metals, butter, meat, etc., etc., and that is why we will stay in the primary producing stage longer than have other countries which lay nearer to the great centers of the world's civilized populations.

Your manufacturers require our primary products; we require your manufactured products, so there is every element essential for a great and increasing trade between your country and mine. The business is there for you if you go after it. Old avenues of trade have been completely cut off by the war. New ones must be opened up.

You people in America are our kinsmen, drawn from the same stock, speaking the same language, and outside of the United Kingdom, our own mother country; yours is the country that we would sooner trade with than any other on earth.

Market Conditions Reflected in U. S. Forest Service

The annual report of the Forestry Branch of the Department of Agriculture, Washington, D. C., states that there was a drop of 30 per cent. in the demand for national forest stumpage during the fiscal year ending June 30, 1915. This is indicated by the falling off in new sales and is a significant index of the unstable market for lumber and the serious conditions obtaining in the forest-using industries. These conditions which are now the subject of a special study conducted by the Department of Agriculture in co-operation with the Federal Trade Commission and the Bureau of Foreign and Domestic Commerce, "are related primarily to the carrying of enormous quantities of raw material, exploitable only during a long period of time, in private ownership. This load of uncut timber, with its far-reaching financial burdens, hampers or prevents the private operator from adapting his business to the changed conditions of his market and to the competitive factors of more or less recent development. Hence a tendency toward a lumber output governed not by the requirements of the country, but by the financial necessities of the owners of stumpage, with its resultant market demoralization and wasteful use of timber resources. Had the National forests never been created, the conditions of trade depression and wasteful exploitation, detrimental alike to the interests of the lumber industry and the public, would have been markedly accentuated. The value of public ownership of a considerable part of the timber resources of the Nation has never been demonstrated more strikingly than by the results of private ownership now manifest.

Although large commercial sales fell off, due to the depressed condition of the lumber market, the number of sales to settlers, farmers, and small dealers at cost rates nearly doubled in number, while more than 40,000 free timber permits were issued, an increase of 549. The steady increase of this use indicates the importance of the National Forests to the communities in which they lie and the stability of the local demand for their products.

The report discusses in detail the work of the Forest Service during the fiscal year ended June 30 last, showing a general increase in all Forest activities except commercial timber sales. It predicts, however, a larger revenue from all sources for the fiscal year 1916, the general improvement in business conditions throughout the country having been already felt in the National Forests, as shown by an increase during the first three months of about $119,000 over the earnings of the same period last year. During the fiscal year, the total revenues were $2,481,469.35, an increase of $43,759.14 over 1914. Of the $5,662,094.13 provided by the regular appropriation for the Forest Service, $5,281,000 was expended for protection, utilization, and improvements, the cost of protection being increased by an extraordinarily severe fire season which necessitated emergency expenditures that were partly provided for by a deficiency appropriation of $349,243. An additional sum of about $196,000 was spent under the law which permits 10 per cent. of the Forest receipts to be employed in road development for the public benefit.

How the Southern Pine Trade is Booming

The widespread improvement in the lumber trade in the United States which has developed during the past two months is well indicated in a series of reports recently received by a prominent Canadian lumber manufacturing firm. Realizing the beneficial effect in Canada which will certainly follow improvement in United States trade conditions this Canadian manufacturer wrote several American firms and received the following among other telegraphic replies:—

Great Southern Lumber Co., Bogalusa, La:—We find great improvement in the southern pine situation. We have orders on hand for over two thousand cars at good prices. We feel that the turn has come and yellow pine will go to seventeen dollars by March or April and feel that it will be fifteen by January.

Long Bell Lumber Co., St. Louis, Mo:—Our order file is increasing. Shipments are in excess of capacity. Prices are advancing and demand growing stronger. We made two advances last week.

Pickering Lumber Co:—Demand exceeds supply. Prices are advancing rapidly. We advanced prices Saturday fifty cents to one dollar entire list. Again advanced prices yesterday fifty cents to one dollar all items common stock and few items of better grades.

Kaul Lumber Co., Birmingham, Ala:—We find the yellow pine demand very active. The market is strong. Our recent shipments exceed output. Improvement in market during past week is marked and seems fairly uniform over the entire consuming territory. We understand dealers' stocks are low. Mill stocks are broken and becoming depleted.

Central Lumber & Coal Co:—We have advanced our prices twice in one week fifty cents to one fifty last Friday and are advancing again today. Sales made last week by one hundred and fifty two mills were one hundred and thirty-eight per cent. of production. We think stocks will be reduced this month by fifty million feet. Stocks were reduced last month by forty million feet. Orders have increased since July forty-two per cent.

Missouri Lumber & Land Co., Kansas City, Mo:—Our business is above normal. Prices are advancing. We have much more demand than can be supplied by our broken stocks.

Roper, Norfolk:—We have made three advances this month. The demand is principally for lower grades, but orders for upper grades indicate that general yard conditions are improving.

B. C. to Build Lumber Carriers

A despatch from Victoria, B. C., states that a bill will be introduced at the next meeting of the British Columbia Parliament providing for a bond issue by the Provincial Government to be used in building 30 four-mast semi-Deisel auxiliary schooners. These schooners will have approximately 2,235 tons dead-weight capacity, or 1,800 tons gross registry. This is equivalent to about 1,300 tons net registry. Their capacity for carrying lumber will be about 2,000,000 feet each. These schooners are to be turned over to lumber manufacturers of British Columbia, who are to assume the bonds and pay for the schooners as bonds fall due. They are to be operated in the lumber trade of the entire Pacific coast. It is reported that these vessels will take about 200,000,000 feet of lumber annually, whereas the present exportation is only about 60,000,000 feet. Keels of six or eight of these vessels are to be laid in British Columbia by April 1, and the remainder to be built as the demand increases.

In the Public Eye

A budget of comment on men and things of moment presented in the interest of our readers, independent of party politics and with malice toward no one.

Right here at the start let me say that this criticizing of the Government is no pleasant task. I am well aware that the publishers of this paper will get little credit for honesty of purpose. So accustomed is the public to the harpings of the party and corporation press that it has become case-hardened. It has learned to look through the printed articles for the self, party or corporation interest that prompted it. Let it be known then, once for all, that I prefer the Borden administration, with all its sins, to a Government controlled by a party that sought to tie us up to the United States with a reciprocity treaty. But this paper represents a constituency of business men. It realizes that they are tired of seeing politics practised where business methods should be applied. They know that honest criticism is the best medicine for any government—even if you have to hold its nose while you administer the dose. As I have said before, the publishers are not in a position to handle a war contract and do not care to farm one out. I myself have no desire to swagger around in an honorary colonel's uniform. We simply want to show that petty politics are no satisfactory substitute for patriotism and that party machines cannot do the work of factory lathes. And permit me to say further, that we believe that things would have been just as bad and probably much worse if a Liberal government had happened to be in power when the war broke out.

* * *

Despatches from Ottawa indicate that the Government is firmly fixed in its resolution to side-step any and all enquiry into the "educative" work of the late lamented shell committee. It is evidently hoping that its work will be so covered by the improved methods under which the Imperial Munitions Board is working that it will be forgotten. But the charge that the sufferings of heroes have been capitalized and made to yield fortunes is one that refuses to die. The Ottawa Citizen, which was early in action against the "profiteers," returns to the charge with a statement that for machining 4.5 inch shells the Motherland has been forced to pay as high as $6.70 per shell, when the work could be profitably done for $2.25 per shell. It also gives figures to show that profits on other sizes of shells were proportionately large. What the public wants to know is how true these figures are. The public has a right to know, and it is going to keep on asking till it finds out. If it does not find out from this government it will find out from its successor.

* * *

That there are two sides to every story everybody will admit. There is doubtless some truth in Brigadier-General Bertram's story that he effected a saving of $14,000,000. It is also very probable that Mr. Cantley and the Nova Scotia Steel Company were entitled to consideration for the reason that they were the Canadian pioneers in shell making and invested considerable money in experiments before they succeeded in producing shells at a profit. Let those men have the credit that is due them. I would not for one moment rob any committee or any manufacturer of one iota of credit for anything that was done to relieve the Empire's great need for ammunitions. But credit can only be given by letting in light on the entire works of the Shell Committee. So long as that committee lies in an as yet unnamed grave the public will think only the worst of it and the government that was responsible for its existence. The fact that it was buried by the Imperial authorities adds to rather than detracts from the Canadian Government's responsibility.

* * *

The Government has everything to gain and nothing to lose by being open and above-board in this matter. So many stories have been whispered, so many charges have been flung broadcast that to remain silent must simply be taken as an admission of guilt—an admission that the worst has not been told. Never since Confederation have so many stories of trickery, trafficking and grafting been afloat. They come to this office by the score. All cannot be given because all cannot be investigated. It would take a big staff working overtime to get into them all. But they pass from mouth to mouth, growing with each telling. Probably most of them have not yet reached Sir Robert Borden. His "machine men" probably see that such as do reach him are fumigated, sugar-coated and otherwise specially prepared for his consumption. But even his own party organs are hinting that makers of munitions "have striven to get large profits out of their contracts." The Toronto News (Conservative) charges it all to "stock market booming," but closes its article with the rather ominous sentences: "As in previous crazes a reckoning is coming. It may be close at hand and some very prominent men may be involved in the inevitable disclosures."

It is up to Premier Borden to see that the Conservative party and the Dominion Government not only are not involved in, but wrecked by the inevitable disclosures. If he has that ability that was ascribed to him when the intelligent electors put him where he is he will rise above his "machine men" and investigate the deals in shells and shell boxes. He owes it to himself, to the great majority of his Conservative followers, to the country he represents and to the Empire we are fighting for.

* * *

A prominent grain man, in telling why Canada should be prosperous, states that Manitoba, Saskatchewan and Alberta this year produced 700,000,000 bushels of grain, of which 300,000,000 bushels was wheat. He gives $450,000,000 as a conservative estimate of its value. Is it any wonder that the other week Winnipeg had larger bank clearings than Montreal, and that the Prairie City is entering on a new era of prosperity? And with millions of acres of this grain-producing land still waiting for the settler's plow why should Canada worry about the future?

* * *

Why did the Government lease the Transcona car shops to a private company for the manufacture of shells? Well, perhaps you had better ask D. A. Thomas. The Shell Committee was the part of the Dominion Government with which he came in contact. So when the Government proposed to start in to manufacture shells without saying anything about price you can imagine him throwing up his hands and exclaiming "Heaven forbid!" However, what he said to the Government was, "put in a tender." Well, you know that Shell Committee never did care for tenders, anyway. It just shied off and the Government with it.

* * *

The Liberal press is loudly demanding the resignation of J. R. Fallis, M.P.P. for Peel because he is alleged to have made an odd dollar in buying horses for the Government. As usual the astute Opposition organs have allowed the Government to draw a red herring across the trail and are off in full hue and cry on the false scent. And while they are howling their lungs out over a spavined horse or two the Government has had the Shell Committee quietly and respectably buried and is leaving it to Messrs. Hichens and Brand to prove that the good committees do live after them.

* * *

The tributes the English representatives pay to the late lamented are most touching. It "has met with remarkable success in dealing with a difficult task." "The measure of its success can be gauged by the remarkable results achieved." In fact it was such a remarkably able and conscientious organization that one wonders where those distinguished Englishmen ever found the heart to abolish it. But abolish it they did for even if some of its members find place on the Munitions Board the latter is a new and entirely different body. It is responsible to the Imperial authorities whereas the Shell Committee was responsible to the Dominion Government. To put it briefly the Dominion Government has buried its "war baby" and the fervent prayer it murmers over the grave is "May its sins die with it."

* * *

But the sins refuse to die. Manufacturers all over the country, both Conservative and Liberal, demand explanations. They want to know why certain firms could get contracts while others could not even get their names put on the list to be considered. They know that open tenders were not received till after those famous interviews which F. P. Jones so evasively denies. They want to know just what powers influenced that Committee in awarding tenders. They want to know if the Jones interview did not save the British taxpayers $21,000,000, just how much it did save him. In short they want that Shell Committee exhumed till a proper autopsy shows just why it died and like a hero of other wars was buried so darkly at dead of night.

* * *

And the manufacturers are entitled to this explanation. Many of them spent time and money trying to get contracts at a reasonable profit and could not even get consideration of their propositions. One man who had the factory and the men waiting for work went to Ottawa. Failing there he went to New York to see D. A. Thomas. Back from there he again went to Ottawa, hung up his coat and announced that he was going to stay till things happened. Did they happen? Not so that they were noticeable. Summoning all the influence at his command he finally succeeded in getting his name on the list of firms to be considered for contracts. Realizing that he had done his utmost he went home. Shortly afterward he learned that his name had been slipped off the bottom of the list. He had simply wasted his time and money. Is that man entitled to an explanation? He is. And his is not an isolated case.

* * *

The public demand an investigation. They look not to the Conservative political machine but to Sir Robert Borden for that investigation. They feel that the Premier who is a gentleman rather than a politician, has been sinned against. They know that when next Sir Robert Borden visits England he will not want to be pointed out as the sponsor for a Committee that scattered its contracts like so much political graft, while our soldiers cried from the trenches for the munitions they so sorely needed. Sir Robert Borden may be deluded by the men he has trusted but he is not the man likely to stand idly by while the good name of the Dominion is dragged through the dirt and grime of a war scandal. Sir Robert Borden will act. Sir Robert

Borden must act to save the reputation of the country he represents and his own political honor.

* * *

One V. Sly who dealt in war supplies without a license is now serving a four months' sentence in an English prison. Would it be infringing on the rights of the Munition Board to require Canadians who deal in war supplies to be licensed? In other words, shouldn't—well say a publisher require a license to handle a contract for shells?

* * *

The suggestion that Canada should give credit to the Empire comes from the London Times and should receive immediate consideration. The Thunderer calculates that in the present year Canada's exports will exceed imports by two hundred million dollars and points out that this balance will be at her disposal for any credits that may be arranged for supplies to Britain in lieu of cash payments. That the suggestion is timely everyone will admit. Canadians are of one mind in regard to the war. It is not Britain's war or Canada's war but a war that involves the freedom of the world. No sacrifice is too great to secure that freedom without which material prosperity would be merely an aggravation. Canada must do everything in her power to help bring the war to a successful close. Every bushel of grain, every dollar and every man capable of bearing arms must be at the Empire's disposal till freedom is assured, Belgium has been avenged and the German war machine is in the scrap heap. It is Canada's part not only to offer every assistance to the Motherland but to grasp every suggestion as to how that assistance may best be given. Giving Britain a line of credit will provide this young Dominion with a new sensation, or rather two sensations—pride in being classed among the creditor nations and pleasure that she is able to aid the Old Land financially in her hour of need. It is whispered that the Minister of Finance will insist on our banks loosening up.

* * *

With the Shell Committee buried and the Munition Committee responsible to the Imperial authorities the Government appears to have washed its hands of the entire war contract business. But does it owe nothing to the country it represents? There are idle factories in Canada that would be running full time if the Government were alive to its duties and capable of performing them. Take the city of Guelph for an example. It has factory accommodation to keep from 2,000 to 2,500 men working overtime on munitions. But though its manufacturers are alive to their opportunities all the war orders they have been able to land are a couple for shell plugs and one for shell boxes, the total amounting to about $75,000. Would a business Government see a neutral country flooded with war orders without putting forth some effort to secure part of this business for its own idle factories? Does its responsibility to the country cease when it shakes itself free from future charges of profiteering? Do our Cabinet ministers draw their salaries for speeches they make at recruiting meetings?

* * *

The busybodies who make other people's morals their chief concern have been at it again. The soldier who comes out of the trenches drenched and shivering can now get his jorum of rum only three times a week. Formerly he got it every morning. If I had my way every one of these "temperance" people would be sentenced to a month in the trenches—without rum.

* * *

Recruiting has now reached the stage where men must be asked to leave good positions to take their place in the ranks. It is a critical stage. When England reached it she made changes in her rules to make the ranks more attractive. Companies of chums were assured that they would be kept together after enlistment and other promises were given. A Canadian who is enjoying a fair salary hardly feels like taking the plunge until he is assured that he will not be asked to act as batman to some young officer who never earned $10 a week.

* * *

The Financial Post is among those who think explanations re the abolition of the Shell Committee should be forthcoming. It says: "There is evidently something as yet to be explained. One commission succeeds another without the public being given what can be regarded as a satisfactory explanation. Documents such as that issued by Mr. Hichens, the British representative, intended obviously to allay the querulous, excite apprehension. There are, of course, some things that it is not wise to discuss publicly, but as to the supply of munitions, or such as comes within the sphere of the Shell Committee's work, frankness and publicity would appear to be better for the Government as well as for the nation. In the public mind there will undoubtedly remain the question, 'Why are all these changes necessary?' Are our Ministers and their staffs to be permitted to thus lightly hand over their responsibilities to commissions?"

SEARCHLIGHT.

According to a nestimate made by the Canadian Pulp and Paper Association, there are at least 15,000 people directly dependent on the pulp and paper industry in Canada. This means 3,000 to 3,500 families, and about 4,000 to 5,000 individuals actually working. Of the total 15,000, probably 12,000 are east of Fort William. About two-thirds of these are in two large areas, one of which centers about Montreal and the other a little north of the Niagara Peninsula. A hundred miles radius from Hamilton, Ont., and a 125-mile radius from Montreal would therefore include about two-thirds of the paper population of Montreal. Outside of these two areas there are large but more or less isolated plants.

Lumbermen Have Wide Privileges on Rivers

The case of Gilbert vs. J. Austin & Sons which was recently heard by Judge McMillan in the County Court of the County of Victoria, Ont., involved much the same principle as the case of Lowery and Goring vs. Booth, the judgment in which was published in the Canada Lumberman of December 1st. The judgments given by Judge McMillan in the Gilbert vs. Austin case and by Mr. Justice Middleton in the case of Lowery and Goring vs. Booth are similar in principle. The plaintiff, Samuel Gilbert is a farmer in the township of Snowdon and he brought action for damages against J. Austin & Sons of Kinmount for the flooding of his lands. About ten years ago J. Austin & Sons built a dam on the Burnt River below the plaintiff's land, and they admit that they put in stop logs to enable them to float their timber. Judge McMillan based his decision upon the Rivers and Streams Act which, he says, gives a right, during spring, summer and autumn freshets, to flood and transmit timber down all rivers, streams and creeks, and it is provided that, where necessary, dams, aprons, slides, locks, booms or other works may be constructed so long as they do not cause unnecessary damage to the rivers or their banks. Judge McMillan then quoted from Judge Middleton's decision in effect as follows:—The rivers of the province are regarded as great highways for the transmission of timber and the province has seen fit to confer upon those engaged in lumbering extraordinary rights and privileges in connection with these rivers. The timber industry is one of vital importance and apparently as a matter of public policy the paramount right is given to a lumberman to take his timber down the streams so long as he does not do unnecessary damage, which is interpreted as meaning damage that could be avoided by the exercise of reasonable care and caution.

In the present case, Judge McMillan said, all parties agreed that the defendants had used these waters and the dam constructed by them in the same way for years past as in the year 1915. There was no evidence to show that the defendants had been in any way negligent. On the contrary they used the stop logs only when necessary. Having found against the plaintiff as above, Judge McMillan dismissed the action, costs to be paid by the plaintiff.

Sawmill Employee Not a Lumberman

An interesting decision under the Workmen's Compensation Act has been given by the Supreme Court of Nova Scotia in the case of Grant vs. Sutherland. This was a case of injury to a workman employed in a sawmill. Mr. A. J. Campbell, as arbitrator, made an award under the Workmen's Compensation Act holding that Grant was employed in a sawmill and not in lumbering, although the sawmill was used in connection with the production of lumber. Lumber operators appealed the case so as to make a test and settle the point whether a man employed in a sawmill could be considered as engaged in lumbering, and thus not come under the Workmen's Compensation Act. The Supreme Court upheld the decision of Mr. Campbell and Grant therefore receives compensation under the Act.

Judgment Given in Timber Limit Suit

Mr. Justice Morrison has given judgment in the suit of the Alberta Northwest Lumber Company vs. B. A. Lewis, a Seattle timber and real estate broker, directing that he shall return farm property in Alberta and sums of money received as payment on two sales of timber limits on Howe ound. The suit was brought on the ground that Lewis and his associates had misrepresented the quantity and quality of timber on the limits, and their suitability as logging propositions. The two sales are set aside by the judgment and the contracts are rescinded. In one of the cases it was also held in the judgment that Mr. Lewis had sold a limit on which the government had issued other timber licenses.

An auction sale of timber lands was held by the Department of Lands and Forests of Quebec on December 14th. In the lower Ottawa agency the Rawdon and Chertsey townships were sold to M. M. Minard of Rawdon for $305. In the upper Ottawa agency, M. Gervais of Hull bought the Malaric township for $85. He also got Lamothe township at the same figure. In the same agency M. Desrouleaux bought the Desmoiselles township for $55, while Mr. Benard got the Maralic township for $75. Pascalis township, in the upper Ottawa agency, went to Mr. R. Groulx for the sum of $325. In the Lake St. John east agency Bourget township No. 2 was not sold while Ranges 5 and 6 in the township of Kenogami were bought by Messrs. Vailancourt and Perron of Robervale. These timber lots had been advertised for auction sale last spring, but had been withdrawn on account of the bids being too low.

Reduced Output in Eastern Canada

Reports Indicate Probable Decrease in Log Production During Present Winter

Reports received by the Canada Lumberman from 26 important mills in Eastern Canada, including Ontario, Quebec and New Brunswick, indicate a reduced cut of logs in the woods this winter. The reduction appears to apply about equally to each province. The total cut of logs by these mills in the winter of 1914-15 was 362,350,000 feet. During the present winter they will cut a total of 292,050,000 feet of logs. A number of these reports have been published in our last two issues. The others are as follows:—

* * *

Chew Bros., Midland, Ont., report that they expect to take out between 6,000,000 and 7,000,000 feet of logs this winter. Last winter their bush scale was between 4,000,000 and 5,000,000 feet. They report a marked buoyancy in market conditions recently. This year, Chew Bros., were sawing under contract until September 4th, when they started to saw their own logs. They closed their mill for the season on November 18th. Although only a portion of their stock, sawn so late in the season will be in shipping condition before next spring, they have sold their entire cut. They are carrying over a large part of a raft in their mill pond to be ready for spring sawing.

* * *

The New Ontario Colonization Company Ltd., expect to take out a fair stock of logs, mostly spruce, in connection with their operations at Jacksonboro, Ont., this winter. Last winter they took out a comparatively light stock. They report that the outlook for the coming year seems to them to be very favorable. They have on hand a fair stock of seasoned lumber which is moving out satisfactorily at the present time and they expect to have it pretty well shipped out early next summer.

* * *

Smith, Fassett & Company, North Tonawanda, N. Y., report that they are taking out 9,000,000 feet of logs in connection with their Canadian operations this winter. Last winter they took out the same quantity. They find that business is improving and they expect improvement to continue. During 1916 they are looking for good business and better prices both in Canada and the United States. Their opinion is that while the probable output of lumber both in Canada and the United States will not be any larger this year than last year, the demand should be considerably larger.

* * *

Herman Weismiller, Bala, Ont., will take out 1,000,000 feet of logs this winter. Last winter he took out about 200,000 feet. Mr. Weismiller is putting in a spur track from the C. P. R. 730 feet long, to connect with his planing mill. He reports that the lumber trade has brightened recently, and that there is a good demand for any lumber suitable for ammunition boxes. He expects the output of logs this winter to be about equal to that of last winter, and as 1915 stocks are pretty well cleaned out he is looking forward to a steadily improving market.

* * *

The Stone Lumber Company, Ltd., Marksville, Ont., expect to take out 2,500,000 feet of birch and maple logs this winter. Last winter their output was 1,000,000 feet. They report that their stock is sold under contract and that they find the demand improving. They are expecting that prices will advance. In their district logging conditions are good and labor is plentiful.

* * *

Lauder, Spears & Howland, Toronto, report that they will take out of the woods in connection with their northern Ontario operations this winter 7,000,000 feet of pine and 2,000,000 feet of hemlock. Last winter they took out 8,000,000 feet of pine and 500,000 feet of hemlock.

* * *

The Georgian Bay Lumber Co. Ltd., Waubaushene, Ont., expect to take out 10,000,000 feet of logs this winter. Last winter they took out about 12,500,000 feet. They expect that the general cut of logs this winter will be much smaller than for many years past.

* * *

Graves Bigwood & Company, Byng Inlet, Ont., report that they expect to take out of the woods this winter about 25,000,000 feet. Last winter they took out 60,000,000 feet.

* * *

The Lake Rosseau Lumber Company Ltd., Boakeview, Ont., expect to take out of the woods this winter, 2,225,000 feet of mixed timber. Last winter they took out 2,000,000 feet.

* * *

The St. Maurice Lumber Company, Three Rivers, P. Q., report that they expect, during the present winter, to take out 24,000,000 feet of logs on the St. Maurice. This will be sawn at Three Rivers, P. Q. They will also take out 10,000,000 feet on the Batiscan River. This will be sawn at Batiscan, P. Q. Last winter they took out the same quantities on these rivers. The company report that the United States market improved during November. They expect a good demand for their next season's cut. Labor for the camps is plentiful and wages are the same as they were last year.

* * *

Gilmour & Hughson, Hull, P. Q., report that they will take out 12 or 13 million feet of logs this winter. Last winter they took out 25,000,000 feet. They report that while trade conditions for some time past were unfavorable, the present outlook is much more hopeful; shipments being made more frequently now than they have been for a long time past.

* * *

Edwards & McLeans, Bonaventure, P. Q., report that they expect to take out 6,500,000 feet of logs this winter. Last winter they took out 8,650,000 feet.

* * *

The Northwest Lumber Company, Edmonton, Alta., will take out 25,000,000 feet of logs this winter, giving employment to over 600 men. Last winter they took out 20,000,000 feet.

Personal News of Interest to Lumbermen

E. W. Backus, president of the Keewatin Lumber Company, and associated with a number of other important manufacturing and industrial concerns, visited Kenora, Ont., recently to look over some of his interests there.

Mr. Hugh A. Rose, eastern representative for the Canadian Western Lumber Company, Fraser Mills, B. C., will leave about January 3rd for British Columbia to consult with the firm. He expects to be away about six weeks.

Mr. J. E. Dougherty, vice president and general manager of the British America Mills & Timber Company Ltd., Vancouver, B. C., in a letter to the Canada Lumberman states that "prices have materially advanced on all grades of lumber and there seems to be more demand now than at any time during the past two years."

Mr. H. G. White, Trade Commissioner for British Columbia recently returned from a trip to South America. He reports a good demand for spruce and Douglas fir and for many other B. C. products. In fact, he states that lack of transportation facilities between B. C. and South America is the only obstacle to prevent B. C. from working up a splendid trade in South America.

Mr. Geo. Bayliss, Binghampton, N. Y., of the Bayliss Pulp and Paper Company, visited Quebec recently. His company is operating the St. Annes' Lumber property. Mr. Bayliss reports that trade has improved greatly. In connection with the St. Annes' property they will take out 30,000 cords this year. He also stated that he intends to operate the sawmills at Valcartier next year.

The Quebec Chronicle says: "Now that Sir William Price has been authorized to begin recruiting for the battalion which he is raising for overseas, we may expect that there will be considerable activity in this military division for the next month or so. Anything to which Sir William puts his hand will be carried out with energy, enthusiasm and efficiency. His past record is a guarantee of that. Consequently we can be confident that there will soon be a new and really representative Quebec regiment in the field to uphold the honor of the Ancient Capital on the fighting line."

Of particular interest to buyers of Arkansas Soft Pine is the recent appointment of J. J. Dilling as Sales Manager for the Stout and Cotton Belt Lumber Companies of Thornton and Bearden, Ark., respectively. Mr. Dilling assumed his new duties December 15th, succeeding Chas. G. Atkinson, resigned. The sales of the two companies, which are allied enterprises, are conducted through the main office at Thornton and involve the disposal of approximately eighty million feet annually. Mr. Dilling's succession is a logical one, he having served for several years past in the capacity of Assistant Sales Manager at Thornton, during which time he has developed a wide acquaintance among lumber buyers. Mr. Dilling has been connected with the Stout interests in various departments over a period of twelve successive years. He is, therefore, a thoroughly experienced lumberman and well qualified to undertake his new duties.

Fred Wood & Sons, Saw Manufacturers

The firm of Fred Wood & Son, manufacturers and dealers in circular saws, Toronto, whose advertisement appears in another section of this issue, are well known to the readers of the Canada Lumberman. Mr. Fred Wood, the head of the firm, has been manufacturing saws in Toronto for thirty-five years, and has a thorough practical knowledge of the saw manufacturing business in all its branches. The firm manufacture circular cross cuts, trimmers, edgers, bolters, concaves, etc., and make a specialty of repair work on the shortest notice, for which their plant is especially equipped.

Death of Abraham Knechtel

Abraham Knechtel, Dominion Inspector of forest reserves, died at Ottawa recently after a short illness. The late Mr. Knechtel was born in 1859 and was a native of Brussels, Ont. He was one of the pioneers in scientific forestry on this continent. He graduated in 1900 from Michigan Agricultural College, receiving the degree of Bachelor of Science. He then took a special forestry course at Cornell University, receiving the degree of forest engineer. For several years prior to going to Ottawa to take up work in the forestry branch of the Dominion government he was attached to the forest, fish and game commission of the state of New York and in that connection laid out the first forest plantation established by the state. In 1904 he was sent to the St. Louis Exposition to lay out a forest nursery there for the commission. In recognition of his services there, he received a special medal. In the same year, he was sent by the New York commission to Europe to study forest conditions and practice there. For several years Mr. Knechtel also delivered lectures in New York under the auspices of the New York state school board.

Charles Hadley of Chatham, Ont., Dead

Mr. Chas. Hadley, Chatham, Ont., of the firm of C. & J. Hadley, died suddenly at his home recently. Mr. Hadley had not been in good health for some time. About eight months ago he suffered a slight stroke which left him with a weak heart. Mr. Hadley was the eldest son of the late Sylvester Hadley a prominent lumber dealer of Chatham. As a young man he became associated with his father's business and continued at it for 25 years. A few years ago he severed his connection with the S. Hadley Lumber Company and became senior member of the firm of C. & J. Hadley, dealers in lumber, sand and gravel. Under his direction the business was very successful. The late Mr. Hadley is survived by his wife and one son, Sylvester, also by three brothers and five sisters.

Stone Lumber Company Loses Foreman

Edward King, foreman for the Stone Lumber Company Ltd., Marksville, Ont., died suddenly of heart failure on December 11th, while in the woods with his men. The late Mr. King was born near St. John, N. B., fifty years ago. As a young man he moved to Bobcaygeon and subsequently to Kinmount, Ont. He was in the employ of Craig and Austin for fifteen years. Five years ago he took charge of the mill of the Stone Lumber Company, Ltd., at Marksville, Ont. Mr. King was an expert with circular saws and a first class millwright. He was of a very likeable disposition and had a wide circle of intimate friends. At his funeral the pallbearers were six men who had worked for him since he went to Marksville, and everyone of the employees of the company attended the funeral. The obsequies were in charge of the Masonic Order, of which Mr. King was a member. Mr. King is survived by his wife and two sons.

The Late James Mapes Dodge

Mr. James Mapes Dodge, chairman of the Board of the Link-Belt Company, died at his home in Philadelphia on December 4th. The late Mr. Dodge was born on June 30th, 1852, at Waverly, N. J., and had a remarkably successful career, both as an inventor and a business man. His inventions were responsible for great improvements in the methods used for elevating and conveying many kinds of manufactured products. Probably his most successful invention was one which reduced the cost of handling coal in and out of storage from 30c and 40c per ton per round trip to less than 5c.

Gatineau Lumberman Passes Away

Mr. W. J. Conroy, Aylmer, P. Q., died recently after an illness of one month. Mr. Conroy was a son of the late Robert Conroy, one of the leading lumber merchants of the Gatineau district. He was in his 66th year, and was born in Aylmer and lived there all his life. Formerly he was a member of the firm of R. and W. Conroy, lumber merchants, who also owned and controlled the Aylmer Water Power for a number of years. Mr. Conroy was mayor of Aylmer for one year and councillor for several pears. He is survived by his widow, two married daughters and two sons.

Ottawa Pioneer Called by Death

Nicholas Link, a pioneer of the lumber industry in the Ottawa Valley, and a resident of Ottawa for over sixty years, died recently at the advanced age of 80 years after an illness of about two months. The late Mr. Link was born at Chelsea, P. Q. Early in life he secured a position with Hamilton Bros., lumber merchants, as a clerk and continued with the same firm, the name of which was subsequently changed to the Hawkesbury Lumber Company. Mr. Link was actively engaged at his business duties until last summer.

Mr. J. D. Burdes, manager of the Shawnigan Lake Lumber Company, Victoria, B. C., one of the best known logging men in the province died recently as a result of injuries sustained when a log rolled over him in a logging camp near Victoria. Mr. Burdes was 47 years old and was the inventor of a switchback railway which was found to be very effective in handling timber in the hills of British Columbia.

Mr. Leander Lingley, a life long resident of Lingley, N. B., died recently at the age of 74. For many years he was engaged in the lumbering business, but retired about five years ago, and accepted the position of postmaster at Westfield, N. B.

Thos. Golds, for many years foreman of Robert Stewart Ltd., Guelph, Ont., died recently at the age of 82 years. The late Mr. Golds was widely known in Guelph and highly respected.

Timber Conditions in Smoky River Valley

A report upon timber conditions in the Smoky River Valley and Grande-Prairie Country has been issued as a bulletin by the Forestry Branch of the Department of the Interior. The report gives the results of a survey of the country which lies between range 23, west of the 5th meridian, and the Alberta-British Columbia boundary, and extending from the 15th base line on the south to the Peace River Block and Pouce Coupe and Burnt Rivers plateau on the north. The survey covered an area of 9,500 square miles. The region belongs mainly to the eastern slope of the Rocky Mountains and to the foothills. Of the area examined about 8,000 square miles is forest land and 1,500 square miles prairie land. Fires have done great damage to the forests, but it is estimated that the total of saw-timber on the area would be 3,727,080,000 feet B. M., and of cordwood 10,654,400 cords.

The valley of the Smoky River was once very rich in saw-timber, but fires have destroyed the best of it. The rather small quantity still existing is found scattered in small patches along the river bottoms or in isolated groups on the slopes.

The Smoky-Simonette timber was the main stand found, and it is considered of real importance.

The permanent forest can be classified into six different types which are generally determined by the quality of the soil, the condition of drainage and the altitude. They are (1) river-bottom type, and (2) lower-slope type, which are much alike, (3) high-slope or height-of-land type, (4) summit-plateau type, (5) muskeg type, and (6) high-mountain-slope type. The species of trees forming these different types are the following:—Lodgepole pine, white spruce, aspen poplar, balsam poplar, black spruce, tamarack, Englemann spruce, alpine fir, northern canoe birch. In permanent forest white spruce is the predominant species in river-bottom and lower-slope types; poplar is often found in admixture. Lodgepole pine occupies the first rank in the height-of-land type, high-slope type and summit-plateau type, with a variable quantity of white spruce and poplar in the two first types, and in the other black spruce and alpine fir. The muskeg type is composed mostly of black spruce and tamarack, while Englemann spruce, pine and alpine fir form together the high-mountain-slope type.

The bulletin concludes with detailed recommendations regarding proposed additions to forest reserves and the organization of a good system of fire protection.

A Plan to Provide Vessels for British Columbia

J. H. Moore, vice president of the Canadian Puget Sound Lumber Company, recently visited a number of the principal United States cities on business. Upon his return he stated that the demand for lumber was improving, not only for export to Europe, but for domestic consumption in the United States. He expressed strong opinions regarding the importance of securing sufficient tonnage for handling British Columbia's export trade. The Government of the province had guaranteed railway bonds to an enormous extent and he believed that it was equally important for the Government to assist in the marketing of lumber by export by guaranteeing bonds for the development of a shipping company. Mr. Moore had in mind vessels of the schooner type capable of carrying about 1,000,000 feet. He suggested the formation of a company with about $3,000,000 capital into which the lumbermen would put some $300,000, the balance being raised by bonds guaranteed by the provincial government.

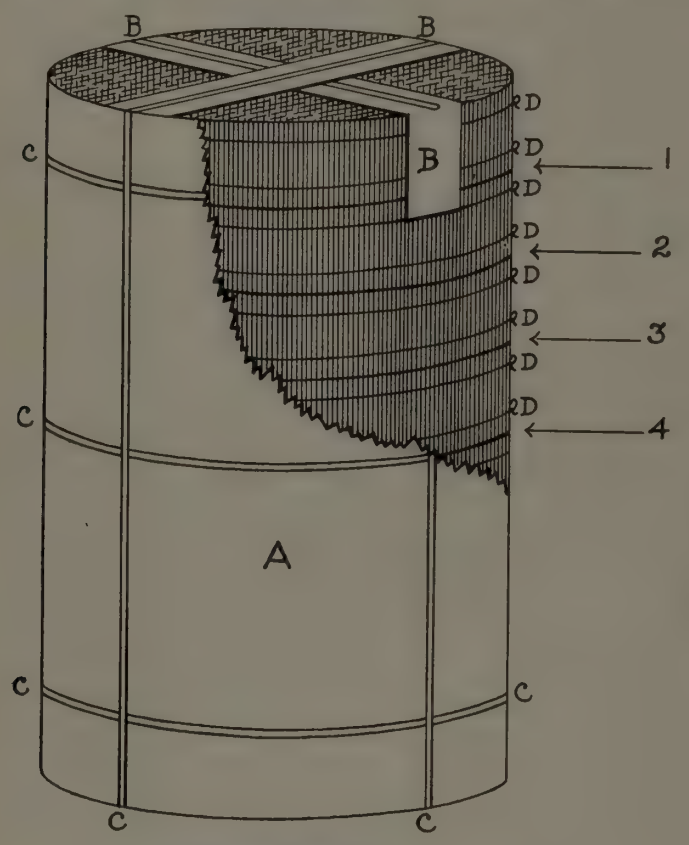
First of the 1916 Calendars

The first of the New Year's calendars to reach us is a splendid large one sent by the River Quelle Pulp and Lumber Company, St. Pacome, P. Q. In addition to a large date pad the calendar is decorated with a copy of a splendid painting by Philip R. Goodwin, entitled "Hitting the Trail." This is a very fine colored picture of a pack train of horses about to ford a river in the course of their journey. The picture is one of the best, from an artistic point of view, that we have ever seen upon a calendar.

Match Splints Required in Australia

There is a considerable quantity of match splints being imported, chiefly from Japan, by the Australian manufacturers of matches whose factories are in Melbourne. Generally, the splints are dipped in a solution of phosphate of ammonia (to prevent the heads glowing) before shipment is made. This trade may be of interest to Canadian manufacturers, particularly those near the seaboard, as inland freight adds considerably to the f. o. b. steamer cost. Quotations on the basis indicated, or preferably c. i. f. Melbourne, if forwarded will be submitted to Australian match-makers. This line is duty free to the United Kingdom (from which no supplies are being shipped), and 5 per cent. to all other countries. The boxes in which safety matches are packed are principally made from skillets—from Queensland green pine—which enables the wood to be bent without breaking, and it is doubtful if dry imported pine would be suitable for that purpose. Any data, however, furnished in respect to skillets will be brought under the notice of match manufacturers. Owing to the high freights and to the difficulties in obtaining supplies of suitable lumber for the required purpose, there now exists a much stronger demand than usual for match splints.

The splints used are of one size only, viz., 50m. long x 2.2m.



Drawing of Barrel of Matched Splints.
A.—Outer covering showing layers of splints 1, 2, 3, 4.
B.—Battens (about 3 in. wide) turned down inside outer covering. (2 each end).
C.—Wire binding (passing over battens on ends).
D.—String holding splints together.

square. The wood must be of the best quality and as light in color as possible. Manufacturers will not accept splints made from dark colored wood. The color should approximate as closely as possible Russian "Aspen." The splints must also be impregnated by dipping in a solution of phosphate of ammonia.

The packing for export is a most important feature, as the splints must be arranged in such form as to be easily fed into the machines. Australian match manufacturers only purchase splints put up in the form of small barrels, one of which is illustrated herewith. These barrels consist of about 8 layers of splints, each layer being bound round with two light but strong pieces of string.

The layers, in which the splints stand upright, are about 12 to 14 inches in diameter, but a slight variation in this measurement would make little difference. In order to keep the eight layers in the form of a barrel, thin sheets of veneer or other suitable material are placed right round them, secured by three or more wires,

Across the top and bottom of the barrel thin sheets of veneer are also placed, these sheets being held in place by two or more wires placed lengthwise right round the barrels.

The advantage of having the splints packed in the manner described is that each layer can be placed direct into the machines without any intermediate handling, thus saving considerable expense incurred over those packed in an ordinary case. The form of the package illustrated is, if anything, on the frail side, and it is possible for Canadian manufacturers to devise a further covering of some cheap paper or other material which would prevent any waste or loss in the event of the barrels receiving severe handling in transit.

By expert opinion, based on the present output, it is estimated that the annual requirements of Australian match manufacturers are from 6,000 to 8,000 million splints. In the packing outlined above eight barrels contain one million splints.

Particulars relative to the present prices paid by Australian manufacturers are available to Canadian suppliers upon application to the Department of Trade and Commerce, Ottawa. (Refer File No. A 1376.)—The Weeky Bulletin.

Bathurst Lumber Company Issuing $1,000,000 in Bonds

The Bathurst Lumber Company, Ltd., of Bathurst, N. B., is issuing in New York $1,000,000 first mortgage five-year 6 per cent. convertible gold bonds. This makes a total capitalization of the company at the present time of $6,000,000. The other $5,000,000 are represented by an authorized common stock to that amount, of which $3,036,150 has been issued. The company's timber rights in New Brunswick and Quebec cover 1,000,000 acres, on which it is estimated there are 1,884,000,000 feet of saw timber and 11,136,000 cords of pulpwood. This timber has an estimated standing value of over $5,000,000. The company also owns the water rights at Grand Falls, on the Nepisiguit river, the second largest in the province of New Brunswick, affording a development of 10,000 horse power. It has 10,000 additional acres of land in fee, and owns and operates three saw mills, with a total annual capacity of 60,000,000 feet; an electrically-driven planing mill with an annual capacity of 25,000,000 feet; and a pulp and container board mill with an annual capacity of 30,000 tons. The total value of the property, exclusive of lumber is in excess of $2,000,000. The net earnings of the company last year were $157,098 from the mill cut. The pulp mill, which has only been completed during the past two months, is operating satisfactorily, and is officially stated to be developing a production which exceeds the estimated output of the engineers. The container board mill is nearing completion, and will be in operation from the first of the year. The president of the company is Senator Edwards, of Ottawa, and a number of Americans are on the directorate, namely: F. M. Kirby, Wilkes-Barre, Pa.; H. Crosby, Buffalo; F. L. Peck, Scranton; C. M. Carrier, Punta Gorda, Fla.; Cyrus D. Jones, Scranton; Hugh McLean, Buffalo; E. S. Peck, Scranton, and M. E. Priesch, North Tonawanda.

Detroit's Lumber Board of Trade

The Detroit Lumber Board of Trade, recently organized, have elected the following officers:—president, Wm. E. Brownlee; vice-president, John C. Lodge; treasurer, C. H. Hecker. The directors are:—W. A. C. Miller, Jeff B. Webb, Louis Schmeid, E. E. Hartwick, Geo. I. McClure and Arthur F. Hoyt. There are 115 charter members to the new board. Mr. Brownlee, the president is head of the Brownlee Lumber Company, one of the largest of Detroit's hardwood firms. Vice President Lodge is secretary of the Dwight Lumber Company, a prominent figure in the retail trade, and is also a member of the Detroit common council. C. H. Hecker is an official of the Detroit Lumber Company, whose main yards and branches constitute one of the largest retail lumber systems in the middle west. The idea of the organization, so far as membership is concerned, is to include all who are engaged in the lumber business, either as producers or sellers. The membership is divided into three classes:—Class A—retailers and wholesalers operating yards in Wayne County (the county in which Detroit is located); class B—wholesalers and manufacturers operating sales offices only in Wayne County and woodworking manufacturers; class C—lumber and sash and door salesmen not maintaining offices in Wayne County.

Much of the business of the board will be to co-operate in the national movement for increasing the consumption of lumber products. The annual fees are graded according to yearly sales of members, the minimum being $25 and the maximum $200.

Committees have been appointed upon organization, membership and finance; newspaper publicity, direct advertising, permanent exhibit and public speakers; and commercial legislation. During the first week in January a dinner will be held at which architects, builders and others interested in construction will be invited to be present.

Australia's Imports Show Decrease

A Drop of Nearly 75,000,000 feet in Receipts of State of Victoria—Consumption and Stocks also Decline

Victoria is the only Australian state in which (for a long period) a detailed compilation has been made of the imports, local consumption and stocks of oversea timber held to June 30, in each year. Practically all the timber was discharged at Melbourne. While New South Wales is the largest timber importing state, the comparative statistical data appended, for the last two years, can be accepted as an illustration of the reduction in importations and the decrease in both consumption and stocks of timber held throughout the Commonwealth. As compared with the previous year, the importations declined by 74,439,000 super. feet, the consumption by 49,280,000 super. feet and the stocks held on June 30, 1915, show a contraction of 16,401,000 super. feet. The war, the recent drought (with a consequent decline in building), and the lack of freight facilities have as in other lines of imports, formed a combination of adverse circumstances which is forcibly reflected in the several accompanying schedules.

Particulars of imports and consumption for the twelve months ended on June 30, 1915, together with the stocks held on that date in the State of Victoria—in comparison with the previous year—are as follows:—

Imports Into Victoria

	1913-14 Sup feet.	1914-15 Sup. feet.	+Increase —Decrease
Red deals	4,778,000	909,000	— 3,869,000
Dressed flooring, lining and weatherboards	51,453,000	35,743,000	—15,710,000
Spruce and hemlock	5,235,000	3,272,000	— 1,963,000
Oregon (Douglas fir)	50,406,000	17,973,000	—32,433,000
Sugar, yellow pine and door stock	3,669,000	1,433,000	— 2,236,000
Redwood	13,727,000	10,478,000	— 3,249,000
American shelving	25,000	74,000	+ 49,000
Ned Zealand kauri	4,096,000	3,275,000	— 821,000
New Zealand pine and rimu	13,947,000	12,400,000	— 1,547,000
Clear pine	73,000	23,000	— 50,000
Pacific pine	13,200,000	590,000	—12,610,000
	160,609,000	86,170,000	—74,439,000

Consumption in Victoria

	1913-14 Sup feet.	1914-15 Sup. feet.	+Increase —Decrease
Red deals	3,991,000	2,629,000	— 1,362,000
Dressed flooring, lining and weatherboards	47,979,000	30,622,000	—17,357,000
Spruce and hemlock	4,817,000	4,967,000	+ 150,000
Oregon (Douglas fir)	40,314,000	29,749,000	—10,565,000
Sugar and yellow pine and door stock	3,202,000	2,980,000	— 222,000
Redwood	14,572,000	12,227,000	— 2,345,000
American shelving	198,000	108,000	— 90,000
New Zealand kauri	4,062,000	3,035,000	— 1,027,000
New Zealand pine and rimu	13,212,000	13,107,000	— 105,000
Clear pine	105,000	72,000	— 33,000

	151,854,000	102,571,000	—49,283,000

Stocks in Victoria

	1913-14 Sup feet.	1914-15 Sup. feet.	+Increase —Decrease
Red deals	3,583,000	1,863,000	— 1,720,000
Dressed flooring, lining and weatherboards	18,454,000	23,575,000	+ 5,121,000
Spruce and hemlock	4,691,000	2,996,000	— 1,695,000
Oregon (Douglas fir)	21,464,000	9,688,000	—11,776,000
Sugar and yellow pine and door stock	4,362,000	2,815,000	— 1,547,000
Redwood	6,169,000	4,420,000	— 1,749,000
American shelving	96,000	62,000	— 34,000
New Zealand kauri	5,009,000	5,249,000	+ 240,000
New Zealand pine and rimu	10,210,000	9,503,000	— 707,000
Clear pine	95,000	46,000	— 49,000
Pacific pine	2,780,000	295,000	— 2,485,000
	76,913,000	60,512,000	—16,401,000

Laths and Pickets

Importations of American laths and pickets were 10,630,000 pieces and 658,000 pieces respectively for 1914-1915. The percentage decrease in imports for the year ended June 30, 1915, compared with 1913-1914, is 53.65 per cent., whilst consumption for the same period is 32.46 per cent less. The quantities received since June 30 and coming forward indicate no dearth of supplies on the present basis of consumption.

Safety Matches in Australia

Inquiries having been received from Canada relative to marketing matches in Australia, the particulars embodied under this heading are submitted for the information of Canadian manufacturers.

It shoud be particularly noted that phosphorous matches are prohibited from importation into the Commonwealth.

The wood matches usually imported into Australia are the impregnated safety matches—to strike on the box—being of white timber with brown heads, packed in boxes each containing 60 sticks; a dozen of these boxes are wrapped in paper packets and 600 packets (50 gross) are packed in a case—the case being zinc lined. Generally, the shipping companies will not accept such cargo unless the zinc lining is provided, and buyers usually stipulate for lining in this way. Quotations have been occasionally made for strong kraft paper lining, but this is not generally acceptable to importers.

To comply with the Commerce Act, each box of matches has to be stamped with the country of origin and the average number of sticks per box, for example "Average contents 60 matches. Made in Canada."

According to the old customs tariff, each brand of the matches had to be registered in Australia, otherwise an extra duty of 7d. (14 cents) per gross of boxes had to be paid. Under the new tariff this provision is omitted but until the tariff is passed by Parliament the Customs demand this extra duty being paid as a deposit. The customs duty is now 8d. (16 cents) if made in the United Kingdom only and 1s. 2d. (28 cents) if made in other countries—including Canada—per gross of boxes, each box not to contain more than 100 matches. If 100 matches per box is exceeded extra duty at full rates has to be paid.

Countries of Origin

Prior to the war, the imported safety matches were chiefly Swedish and English, to a small extent Norwegian, Dutch, Austrian and Belgian, but none of the latter were popular on account of the qualities offered.

Since the outbreak of the war, practically the only matches obtainable under fresh contracts have been Japanese, while limited supplies of Swedish, English and local makes have been provided under old contracts. A few Swedish have been quoted at 3s. 6d. (85 cents) per gross c.i.f. & e. Melbourne and Sydney, equal to about 4s. 10d. (1.18) delivered into warehouse, duty paid and less 2½ per cent. discount. Local matches have been supplied at 2s. 9d. (67 cents) per gross, less 2½ per cent., delivered. The local matches are packed in paper lined cases and in a number of instances only contain 40 to 50 matches per box.

Japanese safety matches are now quoted at 1s. 6½d. (37 cents) per gross, c.i.f. & e. Melbourne and Sydney, equivalent to about 2s. 10½d. (70 cents) per gross, less 2½ per cent. discount, delivered into store.

Prior to the war, based on the old rate of duty 6d. (12 cents) to the United Kingdom and 1s. (24 cents) to all other countries, English and Swedish matches were sold at about 2s. 1½d. (51 cents) per gross, less 2½ per cent., delivered but with the extra duty and much increased freights—together with the advance of raw materials—these prices are no longer possible.

The quotations given herein are for what is known to the trade as "full sized matches" averaging 60 sticks to the box, which is the box looked for by retail buyers.

A few standard sample boxes of the safety matches used in Australia can be seen at the Department of Trade and Commerce, Ottawa.—Weekly Bulletin.

Canada's United Kingdom Exports Growing

In the November 20th issue of the Timber Trades Journal, of London, England, we are pleased to note an interesting reference to the Special Issue of the Canada Lumberman which was published on November 1st. "The promotion of export trade," says our contemporary, "is a predominant feature of the issue of the Canada Lumberman dated November 1st. Nicely printed, as usual, on good paper, our influential contemporary contains many illustrations and descriptive articles, the sole object of which is to bring to the mind of the reader the fact that Canada has an enormous capacity for the production of those products of wood that will be required in the rebuilding of the war-devastated areas of Europe." The Timber Trades Journal then quotes briefly from our Special Issue and concludes as follows:—"We can assure the Canada Lumberman, its readers, and our own subscribers in the Dominion that we will do our best in assisting the further use of Canadian woods on the Continent of Europe. But Canada need not wait until the war is over for an increasing market on this side; in truth she is not waiting, for her exports of sawn wood to the United Kingdom during the past ten months were 936,776 loads, valued at £4,222,000, against 674,191 loads, valued at £2,197,000, for the corresponding period of last year. We hope that these exports will continue to grow year by year."

B. C. Log Production During November

The B. C. forestry department has issued the monthly statement of the cut in the province, giving the figures for November. There were cut in the province 47,436,313 feet, board measure, of saw-logs, 291,577 lineal feet of piles and poles and 9,386 cords of ties, shingle bolts and posts. By districts the cut of sawlogs scaled was: Vancouver, 31,319,771 feet; Cranbrook, 6,953,170 feet; Nelson, 3,572,906 feet; Island, 3,201,743 feet; Vernon, 1,037,901 feet; Kamloops, 790,541 feet; Prince Rupert, 482,769 feet. In the Nelson district 203,992 lineal feet, and in Cranbrook division, 85,370 feet of piles and poles were cut.

Breakage and Bonus in Logging Operations

The subject that has been allotted to me is "The Breakage of Timber"—the old, old subject that originated with the felling of the first tree in history, and has continued to haunt all loggers and timber owners, not as the proverbial skeleton in the cupboard, but as the living terrible fact in plain view at all times.

There are two great destroyers of timber: (1) Destruction by fire; and, (2) Destruction by breakage.

Destruction by breakage must be divided into two classes, namely: (a) That breakage which cannot be helped, and which is sometimes necessary for the saving of more valuable timber; and, (b) that which is caused by carelessness; inexperience; improper management; incompetent judgment; excessive speed on the part of timber fellers in their attempt to fell a large scale in a given period of time to secure additional pay or bonus money; and failure to have all windfalls bucked ahead.

Heavy Percentage of Breakage

Before going any further let us go into the matter of the percentage of breakage. One authority, discussing this problem, insists that one-third of all the timber—taking it straight through—that is felled, on good and bad ground, is destroyed by breakage, and adds that two-thirds of this enormous waste is due to carelessness. Other authorities are less severe in their assertions and place the average breakage of all operations at between five and fifteen per cent. As a matter of fact, can anyone definitely state that he has the actual figures that will show the real percentage of the original stand of timber that has been left on the ground, after all merchantable logs have been removed? Is it not a fact that most of the percentages of breakage that we hear about are for the larger part figures of estimation or guess work? A well known gentleman informed me a few weeks ago that in one operation the breakage amounted to 37 per cent—yes, and he made that assertion with a smile on his lips. Just think of it—37 per cent. of a beautiful stand of this "God-given—man destroyed" resource lost forever to the uses of mankind. Further on in his conversation this gentleman added: "Our labor cost of felling has been reduced considerably this year." But at what a cost. How trifling must be the saving of a few cents per thousand feet in this one phase of felling when compared to the man who owned the timber and who had paid the taxes.

Results Actual Scale Record

I present for your interest some information taken from actual scale records. It must be stated that the timber under consideration was an old growth of yellow (Douglas) fir, western hemlock, cedar and spruce, the stand being, I should imagine, between 80 and 100 M to the acre. The ground was rough. The fellers were operating under a bonus system, and a wood's scaler was employed to scale after them. I am not going into the details of the bonus system. My particular interest being the breakage, it gives me pleasure to cite a passage from my files.

For one week, in which five sets of fellers were working, the number of set-days was 27; the total number of trees felled numbered 311, containing in all 1,082,565 feet B. M. (Spaulding scale rule) in merchantable logs. The average scale per set-day amounted to 40,095 feet B. M. The actual breakage of timber amounted to an an average of 3,988 feet M. M. per set-day; or, approximately 9 per cent. of the stand of timber felled during this week was broken up or left on the ground. So, during this week five sets of fellers were accountable for 107,676 feet of broken, valueless timber. Supposing the stumpage to be worth $3.00 per M, then these five sets of fellers smashed $323.03 worth of timber. The labor cost (not including the overhead charges against them for the period) amounted to $184.85, plus several dollars bonus money distributed among the scale efficient sets.

Here then is the climax. There was a waste in value amounting to 57 per cent. more in broken timber than the value of the wages paid the men for the work. Or, to satisfy myself that the meaning of these figures will be clear to you, it can be stated that each set received $6.85 per day—and smashed $12.00 worth of timber, each and every day during the week. That is of course basing the stumpage at $3.00 per M.

As I have heretofore stated, these men were working under a bonus system and, from what I understand, the management is satisfied with the working of it. The principles for which the system stands are working out. As with other "Output Bonus Systems" the main idea is to reduce the cost of felling by increasing the output, paying the men for additional labor. The system is clever so far as it goes.

Some Bonus Systems Increase Breakage

I am not attacking any particular felling bonus system, but I will rigorously attack any and all methods that will have the least tendency to increase breakage. The felling of each tree is a problem of its own and requires an amount of study, thought and keen judgment borne of experience. I am suggesting that any system that will offer remunerative incentive for faster work and bigger output will tend to cause less care on the part of the fellers in their natural rush and endeavor to secure the additional bonus money offered.

By the increased pace of the men and the bonus money paid for faster work, are the men who own the stumpage, logging plants, machinery, etc., getting all the timber they should get?

Will the decreased cost of felling due to these bonus systems overcome the value of waste broken timber?

Is bonus going to increase breakage?

These are vital questions to any timber owners, capitalists, bond holders of timber lands, timber factors and cruisers, as well as logging operators. They are particularly vital to men who are contemplating the engineering of bonus systems for their own fellers in their own operations, operating upon their own holdings, and still more vital to timber owners who contract the logging of their timber to contracting logging companies.

Fire Loss Diminished

Fire takes place occasionally, but breakage takes place every day, rain or sunshine, that your timber fellers hew and saw. To safeguard the valuable forests against the old enemy Fire, numerous laws have been enacted, Fire Protective Associations have been formed, and the fire hazard has been reduced magnificently. E. T. Allen, at the Congress at Bellingham last year, delivered a report on the progress of co-operative fire prevention and stated that the actual loss by fire was a thousandth of one per cent. of the timber protected.

I look forward to the time when some able gentleman will deliver a report on the progress of co-operative breakage prevention.

Breakage is Largely Preventable

Breakage, two-thirds of it at least, is caused by the overt acts of man. Thousands and thousands—yes, millions of feet of sound timber that should have been converted into merchantable logs have been thus wasted, are being wasted to-day and will continue to be wasted unless you gentlemen combine to check the further ravages of this too slightly studied waste, using the same co-operative spirit that you use against the fire menace. My advice to you is this: Don't be satisfied with an estimate given to you by one of your executive employees of the breakage on your own operations; have it scaled by a competent scaler and then yoyu will have the real figures. Be sure that you know what your percentage of breakage is before you engineer your bonus system for your fellers. Otherwise, you will not be certain whether your breakage is decreasing or increasing.

Don't lose sight of the fact that increase of waste of merchantable timber that will remain on your cut-over lands, after the logger has removed his machinery, will increase the cost of clearing the land when the time comes along when you will want the plough to work and not the axe or donkey engine. Breakage undoubtedly to a great extent materially affects the value of your cut-over lands for this reason—the greater amount of rubbish left on your hands, the greater the cost of clearing and naturally, the reduction in value per acre.

What has been the greatest argument against contracting felling in logging operations. The answer I think you will agree is breakage. In the natural attempt of the contractor to make money, maximum output by speed and not "Safety first" has been his axiom, with the result that excessive breakage has been the report of your own examiners after the work of the contract has been completed.

Bonus System Based on Reduced Breakage

I suggest that the "greater the output, the greater the pay" bonus system is a first cousin to the felling contract that most of you with sound reasoning object to, and this type of a bonus system contains many of the dangers of the contract. Of course where you are operating the afore-described system you control your own fellers, but your bonus system is to a certain extent a conglomerate of small contracts, one for each set of fellers.

Because you have submitted to breakage in the past does not definitely allow of there being no remedy. Scientists of many ideals are striving to safeguard these forests for you; tree pathologists are making studies of tree diseases and are searching for a preventative against conk, punk rot, and fungi of every known description; entomologists are making studies of damage by insects and are daily in their laboratories making every effort to cope with the trouble for your timbermen; tree surgery has arrived in this country to stay, and has been practiced by the French Government for years, and all of this to save timber and you calmly allow 10 per cent. of your own to be destroyed.

There is a remedy for everything, so we are told, and if so, a remedy will surely be found if scientific loggers collectively search for it. Perhaps a suggestion may possibly help you. It has been definitely proved that bonus systems will get for you the desired

*An address by Neol Aylmer Dew, before the recent Pacific Logging Congress.

results, because of the monetary incentive offered to employees. Money talks. Why not offer remunerative incentive for reduction of breakage? Why not appeal to the brains of your fellers and offer them greater remunerative incentive than the present bonus system offers to brawn?

First of all make a breakage study—get the exact percentage and not guess work percentage. With this formidable data in hand of what you have already lost to guide you, you can work out a bonus system for your fellers that shall embrace a standard of breakage. I suggest that the standard shall be the exact percentage ascertained by your scaler. Let bonus then be pair at a ratio determined by the value of the stumpage, at a bonus rate for each 1 per cent. of the saving under the standard. To illustrate: Let us suppose that you have found that your breakage has amounted to 10 per cent., that your stumpage is worth to you to-day $3.00 per M, and that your fellers are averaging 30 M feet per set-day (in some camps felling sets average over 40 M and sometimes as high as 50 M) and that each 30 M is manufactured into merchantable logs. Approximately then standing trees containing 33,000 feet produce 30 M feet of merchantable logs and 3,000 feet is broken up and left on the ground by each set each day. In relative values each set is felling $99 worth of timber on a daily average; you are receiving $90 worth of logs and rubbish to the value of $9 is left on the ground.

Suppose that you offer to pay your fellers 10 per cent. of the value of the stumpage saved, or in this suggestive case 9 cents bonus for every 1 per cent. under the standard. A table of this sort would result.

Suggestive Table

Output per Set—Day of 10 hours 33,000 ft. B. M. Total 30,000 ft. Productive	Breakage Per Cent—Feet	Value of Stumpage Broken (at $3 M)	Cash Bonus
	10%—3,000 B. M.	$9.00	
	9%—2,700 B. M.	8.10	$0.09
	8%—2,400 B. M.	7.20	.18
	7%—2,100 B. M.	6.30	.27
	6%—1,800 B. M.	5.40	.36
	5%—1,500 B. M.	4.50	.45
	4%—1,200 B. M.	3.60	.54
	3%— 900 B. M.	2.70	.63
	2%— 600 B. M.	1.80	.72
	1%— 300 B. M.	.90	.81
	—%— ... B. M.	.00	.90

This of course is purely a suggestive table, and alterations should of course be made to suit any requirements and to comply with every and any stumpage value. You would also have to figure the proportional bonus that in your mind you believe would be paid to the head and second fellers. It is quite possible that many of you will consider that the monetary incentive is not great enough and it will be a question of how much you feel that you will be able to pay for the saving.

You must take into consideration that you will have to engage the services of a compettnt scaler who will be able to distinguish readily what should have been merchantable timber and what would have constituted valueless timber, if unbroken. It must be borne in mind that in speaking of breakage I am referring to sound timber that was in the standing tree, and which if unbroken, would have been converted into merchantable logs. Rough knotty tree tops, valueness cull timber and small limbs are of no known value, and whether broken or not, must not be considered "breakage." It wouldn't be fair to charge up against a set of fellers that portion of a tree that was rotten half way up and happened to break in the rotten spot, and which your head bucker has marked to be bucked out.

Give Fellers a Square Deal

Give your fellers a square deal. See that all the windfalls are bucked ahead of the fellers. This should be rigorously enforced by the management. I have the data of one operation where the superintendent dispensed for a considerable period of time with the windfall buckers. The buckers of the green timber had to buck these windfalls after the trees had been felled over them. I have no data as to the excessive breakage due to this method of procedure, but you will not be surprised to learn that as soon as windfall buckers were reinstated by the management the felling output average per set-day immediately increased and the records of the buckers showed vast improvement.

In the matter of costs, felling and bucking are in many cases bracketted together. The costs, however, should be treated singly. The cost of bucking will be materially affected by better felling and less breakage. There will be fewer cuts to make, because there will be fewer breaks to cut out.

Better scientific felling will ensure better bucking shows, and there will not be so much rubbish for the yarding crews to fight. Buckers working under "Greater Output" bonus systems, at least those that are wise, will always try to get placed behind the fellers that save their timber best because it means a better chance for them to make bonus. Timber examiners, or head buckers as we term them, are not quite the same type of men as the bull buckers of years ago. The old bull bucker made the difficult cuts besides superintending the work of the buckers and had no control of the fellers. To-day, however, the head bucker is generally a master timber feller, and the fellers in his charge know that he is.

When engaging the services of a man for this position be sure that he has had many years of experience along this line of work. Your fellers will surely put it over the inexperienced man who is not competent to cope with a felling problem that one of his head fellers asks his advice about. Your head bucker is a very important man to you. Look up his records very carefully before you hire him. A good man is worth considerably more to you than you are in the habit of paying for this position.

Combination Felling and Saving System

Felling output bonus systems have been installed to reduce the costs of felling and it would be quite possible to install a saving bonus system in the same operation; an amalgamation of the two could be arranged. I would suggest, however, that in the event of this being accomplished, greater monetary incentive be offered for saving than for output. With the two schemes, felling costs and breakage could be reduced at one and the same time.

"Care must of course be exercised that the gain through reduced breakage will be more than offset by the cost of the care exercised," says one authority. "Generally speaking there is a relation between the loss through breakage and the value of the stumpage increases in value. This suggests that the method used must be considered in connection with cost and return."

My fervent desire is to learn that some progressive gentlemen are going to make up their minds to go into this question and that we shall soon hear of energetic steps being taken to reduce want on breakage of timber in our woods operations.

Heavy Losses from Breakage

As soon as those gentlemen who own timber get together and insist that their superintendents and foremen shall see that only a percentage of waste shall remain on their holdings, they will not only be putting money into their own pockets, but they will be protecting in no slight measure the future of the industry, and the general interest of the public. If you estimate the amount of timber that has been removed from the forests of Oregon, Washington, California, Idaho, Montana and British Columbia during the past twenty years and tell yourselves that 10 per cent. of the original stands were broken up and left on the ground, the figures and values will strike home the urgent necessity for some means that will eliminate the disaster that has continued its ravages ever since the hand of man felled the first tree, the disaster of yesterday and to-day.

Your timber lands are not only money to you, but money to the masses. You are even planting forests for the use of future generations. Don't you think it would be more economical to make use of all the timber that you own than to slaughter it when logging and at the same time sow seeds for new forests to cover up your faults?

Many centuries ago there lived a philosopher, one Marcus Aurelius Antonius. I will terminate this address by quoting from his wonderful writings: "If any man is able to convince me and show me that I do not think or act right, I will gladly change; for I seek the truth by which no man was ever injured. But he is injured who abides in his error and ignorance."

B. C. Mining Activity Helping Lumber Trade

Mr. A. B. Buckworth, formerly of Ymir, B. C., whose headquarters are now in Vancouver, recently made a tour of inspection of his timber holdings in the interior of British Columbia. In an interview upon his return he expressed much satisfaction with the outlook for the lumbering industry. Mining has received a new impetus during the past six months and is having a good effect upon the lumbering industry in the interior. Much of the difficulty experienced by interior lumbermen in marketing their lumber of late has been caused by the inability of the coast mills to secure transportation for export, resulting in their stocks being placed upon the prairie markets in competition with the interior product. The present situation, he said, was a difficult one, but both he and those whom he represented had full confidence in the outcome of conditions in the lumber business of the interior and were content to let their timber stand and grow, in the anticipation of a good market in the not very distant future.

The annual meeting of the National Wholesale Lumber Dealers Association will be held in Philadelphia, Pa., in March, 1916. The exact date has not yet been announced.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Wanted–Lumber

Wanted to Buy

1-15 million feet White Pine, Red Pine, Spruce, and Hemlock. Also Lath. Box 259, Canada Lumberman, Toronto. 22-1

Wanter to buy Cedar Ties. Apply Box 269, Canada Lumberman, Toronto. 23-1-2

Wanted to buy 1-in. cull Basswood and 1½-in. good Basswood. Apply Box 270, Canada Lumberman, Toronto. 23-1-2

Wanted for shipment whenever in shipping condition:
2,000,000 ft. 3 in. No. 1 Com. & Bet. Soft Elm
1,000,000 ft. 2½ in. No. 1 Com. & Bet. Soft Elm
1,000,000 ft. 2 in. No. 1 Com. & Bet. Hard Maple
500,000 ft. 2½ in. No. 1 Com. & Bet. Hard Maple
Box 274, Canada Lumberman, Toronto, Ont. 24-3

Wanted

10 cars 2-in. Hard Maple or Birch Common and Better. Apply Box 258, Canada Lumberman, Toronto. 22-1

Wanted

Birch and Soft Elm 1 in. to 4 in. dry or new cut. State quantity and full particulars. The London Lumber Co. Ltd., London, Ont. 22-1

Hemlock Wanted

Want block about 500,000 feet 1 in. and 2 in. Hemlock. Write the Elgie & Jarvis Lumber Company, Limited, 18 Toronto St., Toronto. 1-1

Wanted

500,000 ft. or any portion 4/4 dry White Pine, Box grade, for immediate shipment to Boston, Mass. Widths to run 5 inches up, and lengths, 8 to 16 ft. Box 268, Canada Lumberman, Toronto. 23-2

For Sale–Lumber

For Sale

White Pine and Hardwood, estimated 300,000 feet, will cut to order. G. A. Patrick & Son, Delaware Saw Mills R. R. 2, Lambeth, Ont. 1-6

FOR SALE—Considerable quantity of hemlock ties suitable for Electric Railways, Sidings, etc., ready for immediate shipment. Monteith Bros., Rosseau, Ont. 24-3

We Have a Full Stock

of Hardwood, Hemlock and White and Norway Pine Lumber, Norway and White Pine Piling, up to 60 ft. Keenan Bros., Limited, Owen Sound, Ont. 3t.f.

Lumber For Sale

Purchasers of White Pine would save money in buying now from our three million feet, 1916 cut, because we require financial assistance. Sawing to begin early. Apply Box T., Sturgeon Falls, Ontario. 1-2

Lumber for Sale

100,000 ft. Spruce 5th quality and better, 3 x 3 8/14 ft. $15 per M. ft. 50,000 ft. Spruce and Hemlock Culls, 1 & 2 3 x 3 at $12.50.

One Million No. 1 & 2 1¼ in. cull Lath at $1.50 on cars Manseau Savoie & Co., Manseau, Que., on I. C. R. 22 1

Lumber For Sale

200 Pieces 1 x 15 and up 22 ft. Cypress.
375 Pieces 1 x 15 and up 24 ft. Cypress.
Clear for boat building, in stock at Montreal.

GEO. C. GOODFELLOW,
c Montreal, Que.

White Oak For Sale

Thirty thousand feet White Oak, cut, 1, 2, 3, 4 inches thickness, various lengths from 12 to 32 feet. Also odd sizes, including squares 4, 6, and 8 inch. A snap for quick sale.

CAMERON & CAMERON,
24-3 Beaverton, Ont.

Wanted–Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

---

Book-keeper of high caliber, several years' practical experience in Wholesale Lumber business, desires position; experienced cashier and well acquainted with office management and detail. Box 278, Canada Lumberman, Toronto, Ont. 1-1

Wanted

Position as Lumber Inspector or Salesman. Fifteen years' experience in lumber yards, mills and office; thorough knowledge of White Pine Grades or British Columbia grading; also a general knowledge of export grades for United Kingdom. First class references given. Apply Box 273, Canada Lumberman, Toronto, Ont. 24-2

Wanted–Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents.

Machinist wanted. First Class. Experienced in up-to-date saw mill practice. John B. Smith & Sons, Toronto. 24-24

For Sale–Machinery

FOR SALE—Second hand Bull Lathe, 60-in. swing, 84-in. bed. $150.00 cash; also a lot of Rubber Belting, 6 in. to 16 in., at Low Prices.

MOORINGS MACHINE SHOP,
1-1 40 Pearl Street, Toronto.

Machinery For Sale

A small "Ad" under this heading, telling of what machinery you have for sale, will immediately put you in touch with buyers. Send us a list of machinery items and we will quote you on a small "Ad." Send the list now, before you forget about it. 1-t.f.

Machinery For Sale

One 150 h.p. Stationary Engine; two 75 h.p. Tubular Boilers; two Resawing Machines (with Circular Saws). Savoie & Co., Manseau, Que. 22-1

Engine For Sale

Corliss Engine, 150 h.p., 18 cylinder, 24-inch leather belt, heater and pump, first-class condition, no fault, changing plant to electric. Inspect at Guelph Lumber Co., Guelph, Ont. 24-3

Machinery For Sale

One McGregor Gourlay second hand Resaw, 54-in. wheels, carries 5-in. saws, machine in first-class condition, only used on light work. Located in Central British Columbia.

Two second hand McGregor Gourlay Q. Y. Planers and Matchers, one 9-in., one 15-in. wide, in good condition, ran every day till October, when fast feed Matcher was installed. Located in Saskatchewan. Box 275, Canada Lumberman, Toronto, Ont. 1-4

WOODWORKING MACHINERY FOR SALE:—1 10-in. Berlin four side Moulder; 1 New Britain chain mortiser; 1 Defiance rounder, borer and jointer; 3 pole rounders; 2 automatic knife grinders; 1 26-in. Whitney smoothing planer; 2 26-in. revolving bed double surface planers; 6 30-in. Ideal pedestal bandsaws; 1 20-in. American wood scraper; 2 two-spindle wood shapers; 2 power feed rip saw tables. H. W. Petrie Limited, Toronto. c

Saw Mill Machinery For Sale

Second-hand Machinery for Complete Saw Mill, all practically new, in excellent condition, including Bullwheel, Steam Kicker, Steam Nigger, 42-in. Steel Carriage, 10-in. Steam Feed, 8-ft. Waterous Bandmill, 5-saw Slab Slasher, 48-in. Edger, Trimmer, also Independent Lath-mill, and Filing Room outfit. Power Plant complete. Offers accepted for all or any part. On view at the Waterous Engine Works Company, Brantford, Ont. t.f.

Business Chances

Business Opportunity

Make your opportunity knock at the door of every Lumberman in Canada by placing a small "Ad" about it in this column. Our rate is $2.10 per inch per issue. Now is a time when monied men are seeking good bargains. What have you to offer? 1-t.f.

Miscellaneous

Timber Limit For Sale

Newfoundland timber limit, 112 square miles, well situated right on railway and within several miles of ocean shipping port; will average nine cords pulp wood and two thousand saw logs per acre, spruce and pine. Present demand for pulp wood and with duty removed by Newfoundland Government, makes this an exceptional opportunity for investment at a minimum of outlay. Particulars from Box 277, Canada Lumberman, Toronto, Ont. 1-4

Automobile for Exchange

We have a "Light Six" Chandler, 1915 model, electric light, self starter, and all up-to-date equipment, in good condition. Cost new $2,350. Will sell in exchange for lumber, any kind of lumber, dead cull and better, and will make a big cut in the price of the car. J. & W. Duncan, Limited, 1801 Ontario East, Montreal. 24-3

30 Replies

are often received to "Wanted" and "For Sale" ads. on this page. Even 50 replies are not an uncommon return from the investment of the small amount a condensed ad. costs. And isn't that good business—to get right into close touch with so many people interested in what you have to buy or sell? For you can be sure their transactions with you will not end when they have closed the business your single ad. announced.

Blister Rust Spreading

The alarming character of the white pine blister rust and the economic loss which it threatens to the Northeastern and Western United States are sharply emphasized by four recent serious outbreaks on pine trees and currant bushes in Massachusetts and New York, says the United States Department of Agriculture. This disease was introduced on imported white pine.

In 1909 extensive importations of diseased white pine nursery stock were located and destroyed in New York and other Eastern states, and warnings were issued broadcast against further importation of white pine from Europe. In spite of these warnings importation continued even from the particular nursery in Germany which was definitely known to be the main source of disease, until finally in 1912 all such importation was stopped.

The white pine blister rust affects the Eastern white pine, the Western white pine, the sugar pine and, indeed, all of the so-called five-leaf pines, producing cankers on the stems and branches, killing young trees and maiming and disfiguring old ones. It also produces a leaf disease of currant gooseberry bushes. The fungus causing the disease must live for a part of its life on pine trees and part of its life on currants and gooseberries. The disease cannot spread from one pine tree to another, but must pass first to current bushes and then back to pine.

In Europe the disease has made the culture of American white pine impracticable in England, Denmark and Holland, and has seriously handicapped its cultivation in Germany. Since the trees which it attacks include three of the most important timber trees of the United States, the loss which this disease will produce if unchecked is very great. Fortunately, the disease is not now known to be present west of Buffalo, New York, but if it is not checked in the Eastern states its ultimate spread to the vast forests of the Rocky Mountains and the Pacific Coast is certain. The disease now occurs in three localities in New Hampshire, two in Vermont, ten in Massachusetts, two in Connecticut, five in New York, one in Pennsylvania and three in Ontario, Canada.

The disease could be controlled by the destruction of the diseased white pines or the complete destruction of all current and gooseberry bushes in the vicinity of infected pine trees.

Wood Ware Openings in England

Good Opportunities for Developing Export Business from Canada—Details of the Trade

A report upon the market in Great Britain for manufacturers of wood, sent by Mr. H. R. MacMillan, Special Trade Commissioner, is published in the Weekly Bulletin of the Department of Trade and Commerce of December 6th. Mr. MacMillan points out that Great Britain imports annually a considerable quantity of woodware and wood turnery. In 1913 the value of these imports was $44,098,426 and in 1914, $8,861,400. Almost one half of these came from the United States and the imports from Canada were the smallest from any country from which these goods were received. From 1910 to 1913, while the imports from the United States increased from $3,379,-958 to $6,684,326, the imports from Canada dropped from $538.829 to $252,739. Roughly, one-third of these goods are re-exported to British India, Nigeria, Australia, Argentina, and Ceylon, indicating the possibility of building up direct exportations to the latter countries from Canada. Shipments to Australia include skewers, dowels, clothes pegs and broom handles. The birch, beech and maple of eastern Canada and the alder of western Canada are suitable woods for these articles.

The most important imports into Great Britain under the head of manufactured wooden articles, etc., are kitchen and house utensils, toys, dowels, skewers, chair parts, broom handles, clothes pegs, brush-backs, birch squares for spools, handles and turned wooden boxes. These articles, with the exception of tool and implement handles are made almost exclusively from birch, poplar, beech, maple, basswood or spruce. The handles are made chiefly from hickory and ash. Maple handles, however, are exported to Great Britain from the United States. There should be many firms in eastern Canada favorably located to compete for this trade. Canadians could not compete in the trade for certain smaller wooden articles such as toys, turned wooden boxes and kitchen ware which are made in Europe of inferior birch and poplar in large factories with excellent machinery operated by women who get 40c a day or men who get 75s a day. The larger articles which require wood over 2 in. in diameter, or wood fairly free from knots, command higher prices and afford opportunities for the Canadian manufacturer. The following articles are imported in large quantities from the United States, and to a small extent from Canada:—Birch squares, 1¼ in., 1½ in., 1⅞ in., 2 in. square and 2½ feet, 3 feet, 3½ feet and 4 feet long. These are used for manufacturing spools and bobbins and for chair legs and the cabinet trade. Pin knots are admissable but no large knots. Quebec birch is preferred because it is clean and hard. Scandinavian squares in normal times sell at £9 per standard and 165 cubic feet, and about £12 may be secured for Quebec birch squares.

Dowels are imported extensively, chiefly from the United States. They are all birch and maple preferably, varying from 3-16 in. to 1 in. in diameter and 12 in. to 108 in. in length. The best selling sizes are ⅜ in. diameter, 36 to 48 in. long, which sell c. i. f. English port for 13s and 18s per thousand respectively. They should be tied in bundles of 200. Since the outbreak of the war the price has risen to 17s 11d for 36 in. and 23s 11d for 48 in.

Broom and mop mandles are imported from Finland, Sweden and the United States, the varieties being spruce, basswood, maple or beech. Spruce and basswood are preferred because of light weight. Sizes and prices per gross c. i. f. are:—

	1	2	3
50 in. by 1 1-8 in.....	14s.	12s. 0d.	10s. 6d.
50 in. by 1 1-16 in.....	13s.	11s. 0d.	9s. 6d.
48 in. by 1 in.	10s.	9s. 3d.	8s. 6d.
48 in. x 15-16 in.....	9s.	8s. 3d.	7s. 6d.

The report also gives details in regard to three-ply boxes in which Great Britain does a large trade with Japan, China, India and Ceylon.

The Commission agents specializing in Great Britain in these goods are very desirous of establishing new sources of supply. The names of the most important of these importers have been forwarded to the Commissioner of Commerce, Ottawa.

The B. C. Department of Lands has decided to appoint a lumber commissioner for Toronto and Eastern Canada. It is expected that the new commissioner will commence his work early in January. Further particulars regarding the office, and work of the new commissioner will be published in our next issue. A commissioner has already been appointed for the prairie provinces in the person of Mr. W. H. Houston, formerly of Nelson, B. C., whose offices are in Regina.

The Eagle Lumber Company, Limited, 97 St. James Street, Montreal, have sent to their friends an attractive calendar for the year 1916. "First Aid to the Injured" is the title of a fine colored picture decorating the calendar, and representing a group of huntsmen in their colored costumes, attending to an injured dog.

Review of Current Trade Conditions

Ontario

Throughout Ontario, at the close of the year, the lumber trade and industry was in a remarkably buoyant condition, caused by increased demand and better prices than those which have prevailed for some months past. The situation is an easy one to understand, but none the less welcome. It is the result of conditions which have been combining during the past several months to create in Canada one of the greatest periods of industrial and commercial activity that she has experienced since the days of the late lamented real estate boom. When the enormous orders for war munitions and supplies required by the Allies commenced to reach Canada, most of us felt that they would mean much improvement in the general trade conditions, but few were sanguine enough to expect a period of activity and prosperity such as has now set in. The conditions which prevail to-day are beyond the dreams of even the most optimistic Canadians of a few months ago; and although they have come about almost over night, they are none the less sound or likely to be lasting.

The war order business has simply started the circulation of money and the rest has been easy. When the war order business comes to an end, Canada will—if all the signs can be relied upon—be in the middle of a period of great and general industrial activity, sufficient in itself to take care of the depression which might otherwise result if the war order business were the mainstay of trade. Our crops have supplemented the war orders and brought great quantities of ready money into the country. Many lines of industry which are new to Canadians are being developed successfully to fill the demand for goods which formerly we had to import. Already there are signs that the building trade will soon be at least normal. If we are not greatly mistaken, next summer will see a greater volume of building operations, not perhaps of a residential nature, but of an industrial nature; that is to say, the erection of plants and warehouses to take care of our rapidly increasing volume of general trade. If this is a correct interpretation of present conditions, the building of residences also will not be long in reaching a more normal stage, although there are, of course, throughout Canada large numbers of unoccupied houses. However, the mainstay of the lumber business, the manufacturers who use lumber as a raw material, the railroads, and the new factory buildings are all promising a prosperous year.

Under all these conditions the opinion is now general that we may look forward to a good season's lumber trade during 1916. Statistics go to show that production will not be excessive this winter, and that stocks in all hands are now reduced to a very healthy minimum, from the point of the man who is in the lumber business; that is to say, stocks are badly broken in retail yards, are not heavy in wholesalers' hands and are well sold out by manufacturers. We can see nothing ahead of the lumbermen in Ontario but a good year, and now that the prices of southern pine has gone sky high, and hemlock is continually growing firmer in the United States we will have much less of our two old bogies to worry about than we have ever had in the past.

Eastern Canada

Lumber trade conditions at Montreal are quiet, as is to be expected at this time of year. There is, however, a much more optimistic feeling among the trade than there was a short time ago. Orders are coming in at a fairly good rate. One important wholesaler states that he is now doing as much business as he was in July. The volume of trade in shell box stock has fallen off to some extent as the Munitions Board has not been taking quick delivery of boxes. Shell box makers do not care to keep boxes in stock in large quantities and production has therefore fallen off. The United States market continues on an active scale. Trade with Great Britain is very quiet, as it is practically impossible to obtain space on vessels leaving ports in the eastern States during February or March.

The demand for western spruce frames at Boston is fair and offerings are light. Quotations are very firm, with the base price at $26. Random continues active. The high cost of southern pine is turning attention to the spruce market. Spruce covering boards, 5 in. and up wide, 8 ft. and up long are bringing $20, and matched boards 10, 12, 14 and 16 ft. are bringing three to four dollars more. Considerable improvement is reported in hemlock at Boston both in the demand and in the prices, as a result of the strength of southern pine. Quotations for hemlock boards have advanced fully $3, from the lowest point last summer, and they continue to grow firmer. Good clipped boards 10, 12, 14 and 16 ft. are bringing $22, and one eastern manufacturer has put his price at $22.50. Shingles at Boston are steady. Good brands of extra white cedars are offering at $3.40 and some fairly good white cedars of the same grade are to be had at $3.30. Clears are quoted at $3 and a few sellers will consider $2.90. Red cedars are offered at $3.45 to $3.55, and are quiet. Lath is moving well for this time of year. For 1⅝ in. the usual quotation is $4.25, but a few manufacturers are asking five to ten cents more. One Canadian manufacturer is quoting $3.75 at Boston on 1½ in. lath, but some offerings are available at twenty to twenty-five cents less.

Prices of spruce dimension at Boston have advanced recently. For 10 in. dimension spruce the price is now $27 to $28; for 12 in. dimension $28 to $29. 8 in. and under is bringing $26, and 10 and 12 in. random lengths, 10 ft. and up, are selling at $25 to $26.

Great Britain

One subject only, is interesting the lumber merchants of Great Britain to-day, namely, the extraordinary prices now being paid and the apparent impossibility of ever reaching a limit. Timber merchants in general are optimistic, and with good cause. Many other lines of industry have profited to a greater extent by the war than the timber trade. The boom in the timber trade, however, although concerned with government and army work at present, is likely to continue for some time when these sources of demand have declined. In fact it is likely to be increased rather than to decrease, and timber merchants are well justified in looking upon the whole situation hopefully. For many years after peace is declared there should be a good market for wood, far exceeding the ordinary supplies.

The situation in connection with Swedish stocks continues very uncertain. Germany still appears to command the Baltic largely, in spite of British submarines, and if the position should be unchanged at next open water, British trade in sawn goods with Sweden will depend upon the maintenance of the present attitude on the part of German authorities.

The spruce market at Liverpool is in a satisfactory condition. Stocks are not heavy and holders are adopting an independent attitude with a view to getting full value for their stocks. The volume of business at Liverpool is good. Recent imports have been only moderate. Further advances in all prices are reported from Manchester and quotations for spruce and floorings have reached extraordinary figures, with a continued upward tendency. Spruce prices were recently quoted at £22 10s for 3 x 11 in.; £19 10s for 3 x 9 in.; £19 10s for 3 x 9 in., £19 for 3 x 7 and 8 in., and £19 10s for floorings, c.i.f. basis. All grades of pine at Manchester have also advanced. 3 x 11 in. thirds were sold recently at £25 15s per standard ex yard. All timber consuming industries are full of work, mostly on rush orders. The outstanding question is the matter of labor, which is becoming critical.

At Glasgow, the bulk of the trade is on government orders. Prices of white deals are advancing all the time, but the demand keeps up. The present freight rate from St. John of 200s per standard makes it necessary to obtain, for example, £23 for 3 x 11 in. ex quay. It would cause no surprise if spruce were to become dearer than pine before long.

United States

The year 1915, which commenced in the United States with industrial depression and widespread pessimism, has gone out amid such industrial and commercial activity as the country has never before known in all its remarkable history. Among those who have cause to rejoice over the wonderful recovery, the lumbermen of the United States are especially favored. They are looking forward to the new year with feelings of confidence such as they have not enjoyed at any time during the seven years immediately preceding. Industrial activity in the United States to-day is at high tension. The country's crops during 1915 have been beyond all the dreams of the optimists. The transportation lines throughout the United States are bearing enormous burdens of freight to all parts of the country. Labor is fully employed and capital is strained in production. Better times have dawned for the poor as well as the rich, and all these blessings, added to the unique blessing of peace, place the people of the United States in the most enviable industrial position of any nation in the world to-day.

The steel industry, which is to a great extent responsible for prosperity in the lumber business, is enjoying unprecedented activity, which, moreover, is not entirely based upon temporary war orders, but largely on demand from the railroads, ship yards and building and structural enterprises. The steel mills are booked to their capacity

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. Bole, Pres. F. H. Goff, Vice-Pres. E. C. Barre, Gen. Mgr. W. A. Saurwein, Ass't. Mgr.

for many months to come. On the Atlantic coast, leading ship yards have under contract for construction steamships representing an investment of over 75 million dollars. Pacific coast shipyards have closed contracts for ships that will cost more than 12 million dollars. On the Great Lakes the ship-building activity has been renewed. Traffic of every description has commenced to congest the railroads; in fact, every factor of national prosperity is to-day working at high pressure. The lumber industry and trade can, therefore, do nothing but fall in line and enjoy a record period of success.

Details in connection with the various branches of the lumber industry are all similar. The outlook for the fir manufacturers on the north Pacific coast is better than it has been for many long years. Southern Pine Association reports are excellent. Manufacturers have been overwhelmed with the demand and stocks have been wiped out or disturbed so greatly that many orders are being declined. The foreign demand is strong. The railroads are buying freely. Line yards are hurrying to cover their requirements far into the future. Yellow pine mills for the first time in many years find themselves in a position to name the prices for their products. The volume of trade in northern pine continues large at important centres such as Chicago. Wholesalers report an increased request for upper grades. Retailers' stocks are limited. Similar conditions prevail at Minneapolis. At New York, higher prices prevail and the building situation is improving quickly. At North Tonawanda the trade is standing up well for this time of year and shows a big improvement over the corresponding period of last year.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Montreal Trade Continues Brisk

Montreal, December 24th (Special to the Canada Lumberman): At this period of the year one generally expects the lumber trade to be very quiet; the holidays naturally interfere with business, and construction, except for repairs, is almost dead. This year, however, there is a much more optimistic feeling. Wholesalers report that orders have been coming in at a fairly good rate, the manager of one firm stating that they were doing as much as in July. This is, of course, not true of all concerns, but it indicates that substantial business is still being transacted. Orders for box lumber have diminished, owing to the fact that the Shell Committee is not taking quick delivery of boxes, with the result that the goods are being stored. This retards production, as the various makers find it impossible to warehouse the large quantities which would be made at the normal rate of manufacture.

The orders for the United States are still satisfactory, the briskness of general commerce there helping Canadian wholesalers who cater for that market.

The representative of a local firm exporting to the United Kingdom, who has returned from a visit to several New England ports, states that he found it impossible to obtain freight space for shipments to London during February and March, the steamship companies declining even to quote terms. He also states that he cannot obtain room in vessels from St. John, N. B.

The sulphite pulp market is buoyant, owing to shortage of European supplies to the United States and the higher prices obtained in Europe. Quotations in Canada have risen considerably, with the outlook favorable to still further advances. Stocks are being bought up very quickly. A fair amount of pulp has been sent to England, and larger quantities would have been purchased for the same account had not lack of shipping accommodation precluded transportation. Ground wood is quiet.

Lachine Canal Lumber Shipments Doubled

According to the official figures of the traffic passing through the Lachine Canal during the past season, the shipments of lumber from Ottawa points to the United States more than doubled. The total was 19,107,600 feet board measure, an increase of 10,486,800 feet. In addition there were 41 rafts of 5,000 lineal feet each, a total of 205,000 lineal feet, this being a considerable decrease as compared with the previous year. On the whole the pulpwood and pulp traffic was not so large. Pulpwood passing up to Canadian ports totalled 23,759 cords, an increase of 1,019 cords, while to United States ports the total was 114,192 cords, a decrease of 5,459 cords, the aggregate decrease being 4,440 cords. No pulp was carried to United States ports, against 1,600 tons in 1914. 26,137 tons, however, went to United States ports, as compared with 36,012 last year, the total decrease of this traffic being 11,475 tons.

Montreal Exports Show Large Increase

Montreal, December 20th—(Special to The Canadian Lumberman):—With two exceptions, the principal exporters from the port of Montreal increased their shipments to the United Kingdom and European continent during the past season. The figures given below show a total increase of 35,113,623 feet, due to the impetus given to the demand for spruce and birch owing to the war. The Bennett Lumber Company come into the table for the first time. They are a new firm, so far as the Montreal export trade is concerned, and make a good showing. Watson and Todd, Ltd., continue to head the list, the slight decrease in their shipments being due to the smaller call for pine, in which they specialize. Mr. E. M. Nicholson has the largest increase and is now in second place, because of large orders for birch. Considering the poor outlook at the beginning of the season and the difficulties attending high rates and scarcity of space, Montreal firms have done exceptionally well during the past year.

	1915 Ft. B. M.	1914 Ft. B. M.
Watson & Todd, Ltd.	23,445,439	26,165,790

Douglas Fir Stands Severe Service Test

Mr. H. R. MacMillan, who holds a special commission under the Department of Trade and Commerce to study the extension of foreign markets for Canadian lumber, has forwarded to Dr. John S. Bates, superintendent of the Forest Products Laboratories of Canada, Montreal, from Johannesburg, South Africa, a small specimen of wood for identification. This was a piece of wood from an ore bin which had seen twenty years hard usage in one of the Johnanesburg mines and is still in an excellent state of preservation. Microscopic examination by the wood technologist of the Forest Products Laboratories showed that the specimen was Douglas fir. In the past, Canadian Douglas fir has suffered a great deal in foreign markets from competition with pitch pine from the southern United States. It is interesting to see that Douglas fir has shown up so well in this particular service test and is another proof of the high quality of our foremost Canadian structural woods. Careful examination of Douglas fir and other Canadian woods used abroad will no doubt do much to remove the prejudice which has existed against them. A more thorough study of methods of handling lumber for shipment abroad, in the way of seasoning, inspecting for dry rot, etc., will ensure that the lumber reaches the consumer in first class condition and thus build up a permanent reputation for our products.

Mr. John Rogers, secretary of the Rogers Lumber Company, Minneapolis, Minn., which operates a number of mills and yards along the international boundary in the United States and in the Prairie provinces, visited Victoria, B.C., recently. He reports that the outlook for the lumber industry is very encouraging for next spring, when he thinks that a higher average price will be established. He estimates the orders placed with American mills by the Allies at about 200,000,000 feet, most of which has been yellow pine from the south. In the past four months, he states, the price of yellow pine has advanced $5 a thousand feet. Mr. Rogers also reports that there has been a very strong demand for spruce for aeroplanes.

J. & D. A. Harquail

Company, Limited

Manufacturers of Lumber

Extensive New Brunswick and Quebec timber limits, abundant with Virgin Spruce, Pine and Hardwoods.

Twenty years' experience in Milling and Manufacturing, together with a practical knowledge of Building and Architecture, is why our Customers tell us that the Dressing, Grading, and Manufacture of our Stock is just a little better than they expected.

Large stocks of 1 in. Spruce Lumber always on hand.

Try a car of our Air-dried Dressed Spruce.

We also make a Specialty of Kiln Dried Stock.

Our personal attention given to every detail.

Write, wire or phone us for quotations.

New B. C. Shingle Plant with Large Capacity

The Shull Lumber and Shingle Company, Limited

One of the largest and most modern shingle plants on the Pacific Coast was recently completed for the Shull Lumber & Shingle Company, Limited, on the North Arm of the Fraser River at the foot of Boundary Road, the dividing line between the municipalities of South Vancouver and Burnaby, and distant about four and one-half miles south of the city of New Westminster. Construction work on the big plant was started in June, 1914, and continued until September 11th, when operations were discontinued for the winter owing to the unfavorable market outlook. On April 1st of this year work was resumed with all possible vigor, with the result that early in August the machinery was given a try-out preparatory to starting up one side of the double bank of upright shingle machines. The first shipment of three carloads of shingles was made to Montana before the end of the month, since which time all the machines, twenty in number, have been cutting on a 10-hour schedule, the average daily output being about 700,000 shingles. The plant is equipped for twenty-four Sumner uprights, and with that number in operation the twenty-hour capacity of this fine plant may safely be placed at 1,350,000 shingles. Most of this enormous output is being marketed in the United States, where the company has a wide business connection, and with this object in view a sales office is maintained in Seattle, but the Messrs. Shull also look forward to a considerable trade with Ontario and prairie points, which will be handled by Manager H. A. Shull direct from the mill.

Waterfront view of the Shull Lumber & Shingle Co.'s mill on the north arm of the Fraser River, showing double log haul.

Some of the Main Features

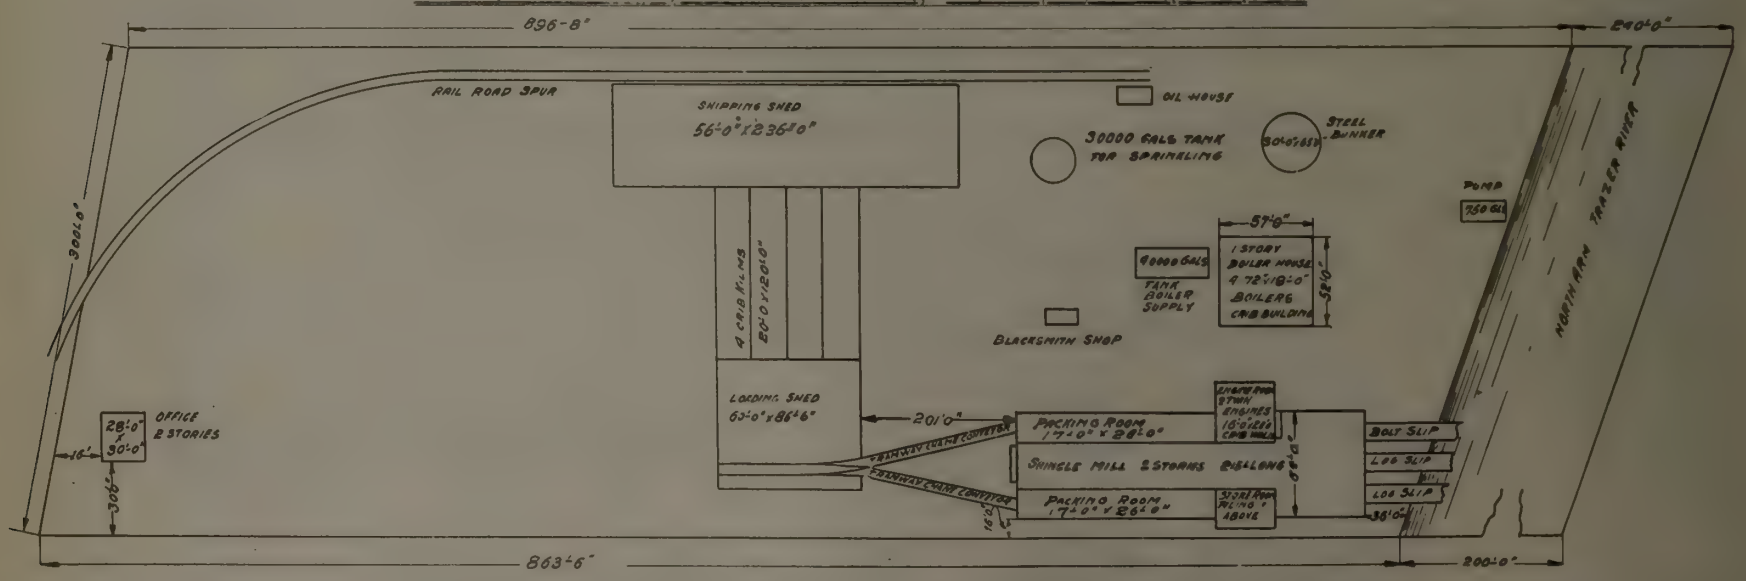
The mill site comprises seven acres, the water frontage being 300 feet. The shingle mill is 74 x 215 ft. in size, there being two 16-ft. storeys and 7-ft. basement. For the foundation 1,015 creosoted fir piles were driven to hard pan—14 feet. The engine room, 32 x 36 ft. in size, is located on the first floor, east side, 50 ft. from front of mill. It contains two 16 x 20 in. twin engines, and one direct-connected generator for lighting purposes. Considerable of the remaining space on this floor is occupied by the sorting bins, shingle packers, and transmission machinery. The bundles are transferred from the packing room to the kilns on elevated transfer chains—a method now in use in a few of the best mills in Washington State. On the sawing floor above the cut-off room, at the south or waterfront end, is 50 x 52 ft. in size. The mill is two-sided, and each side is entirely independent from water to dry-kiln with a view to economy in operation under varying market conditions. Each has its own endless chain log-haul, 86-inch swing cut-off saw, steam splitter, 52-inch knee bolter and grinder for cut-off saw. In addition there is a bolt-haul and bolt cut-off saw, so that bolts may be used to supply a number of machines when the price of that class of timber is attractive. From the cut-off room the blocks pass to a conveyor which runs down the centre of the long machine room, and from this they are transferred by a couple of active employees to the feed tables of the machines lined up on either side. Blocks cut from bolts at the east front of mill are delivered by a dog-chain conveyor to the main conveyor.

The filing room, 32 x 36 ft., adjoins the cut-off room to the west. It has numerous windows which admit a flood of light. The equipment comprises three Covel grinders, one Schaake grinder and one Letson & Burpee grinder. Overhead carriers deliver the saws from the filing room to the machines as required.

The boiler house, which is located 31 feet east of the main building, and in line with the engine room on the first floor, is 52 x 57 ft. in size and 22 ft. in height. Over 350 piles were driven for the foundation, and the concreted floor is 32 inches in thickness. Four Vulcan Iron Works boilers, 72 in. x 18 ft., with Dutch oven equipment, are installed. The stack is 6 ft. in diameter and 100 ft. in height.

A steel refuse burner constructed by the Seattle Boiler Works, Ballard, Wash., is situated 103 feet east of the mill. It has a diameter of 33 feet and is 65 feet in height. The burner is lined with brick, a 16-in. course running 42 feet, the balance being 8 inches, the total quantity of brick required being 135,000. The foundation is made up of 150 piles driven to hardpan, on top of which is concrete to a thickness of 5 feet.

North of the main building, a distance of 102 feet, are four North Coast dry kilns, each 20 x 120 ft. in size, and close by is the storage shed, 56 x 216 ft., served by a spur line from the British Columbia Electric Railway. At the northwest corner of the mill site the company have erected a substantial two-storey office building 28 x 32 ft., sleeping quarters for the staff being provided on the second floor. Across the B. C. E. R. track are a Chinamen's house, 28 x 90 ft., also a large boarding house for the mill crew.



Other Interesting Particulars

The dry kilns, boiler house and engine room are built of 2 x 6 in. cribbing laid flat, which reduces the fire risk to the minimum. An

Shell Box Lumber

DRY BIRCH

WE have in stock approximately three (3) million feet of 4/4-8/4 and 12/4 Birch sawn during seasons of 1913-1914 and 1915. This is particularly suitable for manufacturing or Boxing purposes as it was sawn partially square and partially round or live edged.

We have extensive Kiln Drying, Resawing and Dressing Plants and can work to order.

DRY SPRUCE BOARDS

We carry the largest and best assorted stock in Canada.

Send us your inquiries.

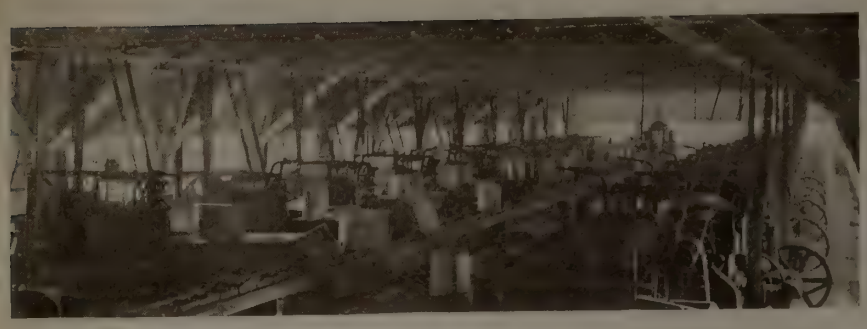
Sales Office:
Springfield, Mass.

Saw Mills, Storage Yards and Planing Mills:
SAYABEC, QUEBEC



Shingle manufacturing room, showing installation of 24 machines. Note the feed block conveyor in centre.

automatic sprinkler system protects the interiors of the buildings, the water supply being taken from a 30,000 gallon steel tank on a tower 85 feet in height, and additional security is given by a system of waterworks installed by the company. The size of pipe used is 6 in., and numerous hydrants, with ample hose equipment, are located where deemed necessary. An Underwriters' pump, capacity 750 gals. per minute, feeds both systems.

The Sumner Iron Works, Everett, Wash., installed the shingle machines, engines and transmission machinery; the Taylor Belting Company, Limited, Vancouver, supplied all small sizes of leather belting; and the Western Oil & Supply Company, Limited, Vancouver, furnished the two large engine belts—one 30 in. leather, 59 ft., one 30 in. leather, 111 ft., as well as all Balata belting used on machines and conveyors. The Disston Saw Company secured the contract for cut-off and all shingle saws.

About one million feet of lumber and timbers went into the construction of the various buildings. The order was shared by Brunette Sawmills Company, Limited, and Small & Bucklin Company, Limited, New Westminster, in about equal quantities.

The waterfront area for log storage is 240 x 1,500 ft., and additional space is easily available. The area is divided up into a number of pockets for various grades of logs, nearly 300 piles having to be driven for this purpose. There is 11 feet of water at end of log slips at low tide, and 14 feet at outer boom.

The mill plans were prepared by Mr. Lustig, Sumner Iron Works architect, the superintending millwright being F. W. Talmadge (an old Allis-Chalmers Company man), who built the Seattle Cedar Lumber Company mill at Seattle, which is reputed to have a daily output of one million shingles.

Tom O'Connell, superintendent of the Shull Company plant, hails from Washington, where he acquired a wide experience in the shingle business.

About one hundred men are employed, the majority being white. Most of the latter have their homes in New Westminster, making a trip in and out via the British Columbia Electric Railway.

The name of the B. C. E. R. station is to be changed from Boundary Road to Shull Mills, and an application made to the Post Office Department to have a post office located at that point to serve the large volume of business now originating there has been granted. The address is Shull, B. C.

The plant of the Shull Lumber & Shingle Company, Limited, represents an investment of about $200,000 of American capital. Mr. Harry A. Shull, the chief stockholder and manager of the new plant, is married and resides in Vancouver. He is a young man with a wide experience of the shingle business which had its beginning in Minnesota, his native state. For the past three years Mr. Shull has been operating a large shingle mill in Everett, Wash., which he is now willing to sell or lease in order that he may devote all of his energy to his B. C. plant. His father, Mr. John Shull, was a prominent lumberman in Minnesota years ago, and later was connected with J. W. C. Shull and the Brooks Scanlon Company at Kentwood, La. Mr. Shull retired some years ago and makes his home in Portland, Ore., but since the commencement of work on his son's B. C. plant he has spent much of his time on this side of the line.

How to Make Retail Stocks Move

By Paul E. Kendall

In view of the many attacks on wood, both past and present, it would be well for the lumberman to study his business, himself and his product in order to find out whether the fault is with himself or with the commodity he sells.

Wood long held an undisputed first place as a building material. It still holds first place in spite of the many attacks upon it by well advertised substitutes. These substitutes have had a rapid growth during the last few years, but their popularity is due not to their value or merit but rather to the fact that their promoters saw the value of two important things that the lumberman has been very slow to adopt—namely, modern advertising and modern merchandising methods.

At first the substitutes of wood offered themselves as substitutes, but when they found that manufacturers and dealers in wood and wood products felt so secure that they neither noticed or answered their attacks on wood, they began to make wild assertions as to their own value. The next step was to educate the public into believing that wood was out of date and not a perfect building material. Large sums of money were spent in national advertising campaigns. Then they discovered two amazing and wonderful things; first, wood burns, and second, wood decays. However, like a great many present day "discoveries" what they found out was not new, but by constantly advertising these facts they succeeded, in a measure, in creating a feeling of doubt in many minds and converts turned from the tried and true original wood to the less worthy but widely advertised substitutes. **No substitute was ever as good as the original and so it is with the substitutes for wood. Why is it then that we find the lumberman trying hard to sell a product that he thought should and would sell itself?**

The answer is simple. The question answers itself. **No product, however good, can sell itself to-day. You must use progressive and aggressive advertising and merchandising methods. Otherwise your goods will stay in your yard or on your shelves. You MUST advertise. Save the advertising bill and lose business or by means of advertising sell more goods; pay your advertising bill, and make a better profit. Write this in your notebook—"In this day it costs more not to advertise than it does to advertise."**

Did you know wood burns? Did you know wood decays? Had you heard that the forest supply is nearly exhausted? Did you know that the present price of lumber is prohibitive? No! Where have you been? On every hand you see this or that substitute for wood telling you such things and many more. You read it in the morning paper, on billboards, on fence rails, in magazines and in show windows. You know wood burns and that some of it will decay if not properly protected from the elements. But you know that the forest supply is ample and that it is a mere joke to say that wood—the best and cheapest building material—is selling at prohibitive prices to-day.

You also know that iron rusts. I quote from a recent advertisement, "Rust—not wear—builds up the Junk Heaps of Canada. Canada's loss through rust is tremendous. On account of using ordinary, fast-rusting sheet metal, Canadians annually lose enough money to build a super-dreadnaught, etc." Then the ad goes on to tell why a certain kind of iron should be used. That is a clever piece of advertising and it tells of an awful loss from rust. National defence is a great public question right now and another super-dreadnaught would come in rather handy. The first part of that advertisement gives a very forceful reason why more wood should be used. You know of many homes and buildings here in Canada built of wood many years ago and they still stand and are in fairly good repair although many of them have been neglected for years.

When bricks are improperly made the wall may soften and wear. How many brick walls do you know of that were used again after they passed through a hot fire?

There are many recent examples that show that concrete is often useless after a hot fire.

What is the matter with wood then? Nothing! Wood suffers because its manufacturers and dealers lack two things—modern advertising and modern merchandising methods.

Years ago the lumberman waited for business to come to him and it came; for wood was a necessity and substitutes were unknown. **As time went on the substitutes entered the field** in ever increasing numbers and they used modern advertising and modern merchandising methods. **What did the lumberman do? He laughed at the substitutes and waited for business. It began to dwindle and when things had reached a bad state some lumbermen woke up and began to look about to find out why they were losing business to inferior substi-**

tutes. At first they blamed anything that looked like it might stand the strain; then they went deeper and some of the wise ones found that the substitutes had some merit plus worlds of expensive advertising and up-to-date business methods. They knew that wood was first when it came to real merit but they also knew that wood lacked advertising but some still won't admit that it has not been properly merchandised for the last few years.

I should like to see your big forests in Canada, in fact, I have often dreamed of a trip in the great Canadian woods. I know I would be pleased and thrilled, if you please, at the sight of the trees just as I was one evening about sunset as we were on our way to see the big trees of California and the sun was just at the head of the valley and—well—I shall never forget it. But I don't thrill any when I see an ordinary pile of lumber and you don't either. Then, please tell me why you expect any customer to even show interest when you show them a pile of lumber and talk about 2 x 4's, 2 x 6's, siding, etc. ad infinitum.

When I buy an automobile I should like to see it before I buy it but in case I cannot then I will get a catalogue—corresponding to your lumber plan book. The first thing of importance will be its general appearance and then comfort and convenience. I am not a mechanic, few car owners are, and many of the fine points (to the salesman) will be lost on me. I don't want a certain kind of steel or bearings but I do want a car. Again here is your answer. **Sell "Homes"—"Barns"—"Sheds"—"Silos"—Have your plan book and be ready to give careful and exact estimates that will hold out.** There was a day in lumber history when a woman would almost have gone into a barber shop before she would have gone into the office of the local lumberman. **To-day the wise lumberman does his best to get the women into his office. He knows that a woman spends a large part of her time in her home;** that she is the one who takes the most interest in its appearance, comforts, and conveniences; in a word, that she has the planning of it. **If you can suggest a time or step saver to that woman you have done more towards making a sale than if you had spent an hour running down your competitor or lecturing on prices and grades.** I am tired of hearing about price per thousand and grades. But I know that I can and did sell "Granaries" and lots of them by advertising, that I was selling complete Granaries; that I furnished a capacity table and all that Mr. Farmer had to do was to find out the size he wanted and, if it was over 1,000 bushels capacity, I would furnish it for so much per bushel capacity. Of course these granaries all followed the same general plan. But this method of selling gave the farmer a starting point—something definite. He knew if he wanted a 10 x 20 granary it would hold so many bushels and by using the price per bushel we furnished him, he could sit at home, figure out the size and price and then talk it over with "mother and the boys."

Don't sell lumber—sell buildings. Sell a home; an ideal and not wood; a material. Help the customer to work out his ideas and don't forget while you are trying to make the sale that your customer is more interested in the completed structure than he is in the materials that enter into its construction.

You must see the customer's viewpoint if you wish to succeed in advertising or selling. You must study the customer's mind and then appeal to him along the lines he would naturally approach, if he were investigating for himself. Tell him what he wants to know before he has to waste a lot of his time and yours too. Use the customer's language; forget 2 x 4's siding, etc.,—it may be Greek to him—but sell comfort and convenience in the form of HOMES; protection and economy in the form of BARNS; and conservation and preservation in the form of SILOS.

After the customer has made up his mind what he wants and he has seen a plan photograph, or has "an idea how it will look," he wants to know how much it will cost. Now the old method is that the customer is told that it will cost so much and maybe it will and maybe it will cost from one-fourth to one-half more. We must adopt the plan of giving guaranteed complete bills of such materials as we are to furnish. You think it can't be done. If you don't the mail order houses will soon take care of the business for you, for they DO furnish plans and estimates in romantic books called catalogues, and lots of hot hours for the local dealer. And simply because they study the customer and talk in his language. They tell him the things he wants to hear and other things he didn't know. I don't know some of them either, for after reading some of this well got up literature I was satisfied that there was a special kind of tree grown expressly for mail order houses and the poor local dealer can only get the "trimmins."

Your advertisement should tell a simple, straight story. Don't overstate the case—you don't need to. If you do not know what to say just write what you would say to your customer if he were in your office at the time and you were talking about buildings. **Work to CREATE business, don't take what comes to you alone; go after the business and you will have** to go quite a ways these days.

The old time ad—"See Bill Jones for Lumber, etc."—has had its day. Such an advertisement to-day is a waste of space, paper, and ink. Circular letters and space in your local papers will make retail sales. A good advertisement must first—catch the eye,—then the mind,—and then create a desire for the object advertised.

After all is said and done we get right back to the two things that are absolutely necessary to the success of any business and especially so to the dealer and manufacturer of wood—MODERN ADVERTISING and MODERN MERCHANDISING.

Reading Camp Association's Work

The Reading Camp Association, which sends men to lumbering and construction camps throughout Canada to assist the laborers in their education and to furnish them with many comforts they would otherwise lack, has carried on its work successfully during the war. At the outbreak of the war some friends of the Association thought that such a work might be suspended for the time being. To their representations careful consideration was given, but it was decided that it would be a short-sighted and dangerous policy even temporarily to relinquish such a work. Continued hearty support of the work is proof of the wisdom of this decision. The effectiveness of the methods pursued by the Reading Camp Association has been clearly demonstrated.

From sixty to seventy-five Christian young men—University graduates and undergraduates—each year go out under the auspices of the Reading Camp Association to the camps in the wilderness. They live side by side, not only with the Canadian navvies, miners and lumberjacks, but with the Russians, Italians, Bulgarians, etc.; eat at the same table, do the same work, and endure the same hardships.

They are provided with neat, clean, comfortable and attractive tents and buildings, where the men, irrespective of nationality, are invited to spend their evenings. The instructors write letters for their fellow-toilers, and help them in times of accident, sickness or trouble.

In the tents and buildings instruction is given in the evenings, on rainy days and on holidays, both to English-speaking men and foreigners. It includes the teaching of the English language and our ideals of citizenship to the non-Anglo-Saxons. The instructors demonstrate what it really means to be a Canadian. They carry on the process of assimilation in the only way feasible, namely, by personal contact.

The work of the Reading Camp Association, which commenced in a very small way in Algoma, has now extended to every province of the Dominion, except Prince Edward Island. Over five hundred instructors have been employed. Eight Provincial governments have assisted in the work, and have thus given to Canada the distinction of being the first country in the world where the government has made any effort to give an education to the frontiersmen at their work.

The Association renews its appeal to university men to give one or more years' service to the frontiersmen.

It also renews its appeal for contributions from all patriotic Canadians who want to have a part in this effort to mould the diverse elements into an harmonious national life.

The office of the Association is at 44 University College, Toronto.

Should Copy B. C.'s Campaign

The activity of the B. C. Government in seeking foreign markets for B. C. lumber is attracting a good deal of attention in the Western States. The "Oregonian," of Portland, Ore., in a recent issue refers at considerable length to this subject and after outlining the efforts already made by B. C. along this line says:—"The B. C. Government appears, in this respect, to be ahead of our own Government . . . If the United States Government is to extend the same aid to Pacific Coast lumbermen that is being given B. C. lumbermen by their local Government, it will be necessary without further delay to study the demand for lumber and to aid in building up a European market for Pacific Coast lumber." Referring to exports from B. C., to the United States, the report states that timber products exported to the United States, invoiced through Vancouver, for the three-quarters of the year ended September 30th, 1914 and 1915 were valued at $4,021,635 and $5,622,451 respectively.

Reports from B. C. state that the logging industry is very active at present. The camps of the Comox Logging Company are not to be shut down this year. Usually they close down for a period of two or three months in the winter. At present they have plenty of work to keep them going for some time.

Twelve loggers, who were on the tug Constance which foundered off Sechelt on October 2nd, have entered suit in the Supreme Court of British Columbia for $2,220 damages for loss of their belongings. The defendants are Hind Bros., owners of the tug, and the Terry Logging Company, by whom they were employed. The loggers allege that the tug was not licensed to carry passengers.

"Everything in Canvas"

Contractors to the Army and Navy of the British Empire

DURING the past few years our manufacturing facilities have increased fourfold. The amalgamation of the Woods Company, with the Smart Bag Co. into which it is now known as Smart-Woods, Limited, offers for your approval the products of one of the strongest and most reliable manufacturing corporations in the whole of Canada.

AS a result of this amalgamation, not only have our manufacturing facilities been wonderfully increased, but we are now in a much better and greater position to offer you all lines previously stocked, as well as many others that come direct from our recently added factories.

In addition we may say, "Our foreign trade has increased by leaps and bounds—both European and American—and we are prepared to enter into competition in every civilized portion of the globe."

Smart-Woods' Special Surveyor's Tent. Write for Catalogue.

WE are now open for competition in every thing that is possible to be made out of canvas, as well as all lines of Lumbermen's and Contractor's Supplies, such as Blankets, Clothing, etc., etc., it being one of our greatest pleasures to quote prices at any time. Our wonderful large stocks of raw material and increased number of factories, (Ottawa, Toronto, Montreal, Winnipeg, Renfrew and Welland), enable the execution of largest orders on shortest possible notice.

Samples and quotations will be furnished at any time and every possible expediency rendered to hasten shipments as soon after ordering as possible.

F. C. McInnes, Leeburn, Ont., will rebuild next spring the mill which he lost by fire a year ago

The Northern Tag Company Ltd., has been incorporated with head office at Port Arthur, Ont., and capital stock of $40,000 for the purpose of dealing in pulpwood and paper.

The Wood Products Company Ltd. has been incorporated with head office at Toronto and capital stock of $100,000 to carry on business as timber merchants, sawmill proprietors, etc.

The town of Stirling, Ont., has passed a by-law to grant a bonus of $1,500 to Messrs. Wallace, Chapman and Marshall of Oakville, Ont., for the erection of a box factory. The owners will be in the market for lumber.

The York Paper Box Company Ltd., has been incorporated with head office at Toronto and capital stock of $40,000 to carry on business as dealers and manufacturers in all kinds of paper, pulp, pulpboard and all articles manufactured from pulp, wood and paper.

McAllister & Sons, Ltd., have been incorporated with head office at Guelph, Ont., and capital stock of $40,000 to carry on business as lumber manufacturers, and to deal in timber, lumber, etc., of all kinds. The provisional directors of the company are J. A. McAllister, G. McAllister, and M. L. McAllister.

The Lindsay Woodworkers Ltd., have been incorporated with head office at Lindsay, Ont., and capital stock of $40,000 to carry on business as manufacturers and dealers in lumber, logs, etc. The provisional directors of the company are J. A. Peel, R. A. Pogue, H. Irvine, N. Smale, J. F. Maunder and T. H. Stinson.

A contract has been awarded by the McCallum Mfg. Company, 44 Dupont Street, Toronto, Ont., for the erection of a new wood working factory at the corner of Davenport Road and Lightbourne, to cost $7,500. The building is to be of brick construction, two storeys, 30 x 40 feet. The contractor is A. J. Peppiatt, 12 Wells Hill Ave., Toronto.

Eastern Canada

The E. B. Eddy Company, Ltd., Hull, P. Q., have secured an extra-provincial charter to carry on business in the province of New Brunswick.

P. H. Renaud., Lake Megantic, P. Q., is putting up a sawmill. He already has camps in the woods and expects to take out about 2,000,000 feet during the present winter.

The curator of the estate of Richer and Freres, sash and door manufacturers, 2607 St. Hubert Street, Montreal, is offering for sale, by sealed tenders, the property of the firm. This includes the saw mill and machinery and several vacant lots of land.

The Canadian American Corporation Ltd., has been incorporated with head office at Montreal, P. Q., and capital stock of $300,000 to carry on business as manufacturers and dealers in lumber, timber and logs. Those interested are L. A. David, L. E. Mailhoit and S. H. Bush.

Twenty-six thousand acres of timber land owned by the Londonderry Milling Company was sold by the sheriff for $107,850, at Truro, N. S., recently, to P. C. Black, of Amherst. It is understood that Mr. Black bid in the property for the Maple Leaf Lumber Company and the Canadian Car and Foundry Company.

Crandall Harrison & Company, Limited, have been incorporated with head office at Newcastle, N. B., and capital stock of $40,000, to carry on business as lumbermen, wood manufacturers, etc. Those interested include H. W. Harrison, Newcastle; J. H. Crandall, Moncton; A. Watson, I. F. Archibald, and F. R. Taylor, of St. John.

Excellent progress is reported on the construction of the Cape Breton Pulp Company's plant at St. Anns, C. B., which is to work the large timber limits in that vicinity. The rossing mill is now nearing completion. It is planned to start a big output of pulpwood this winter. The company is controlled by American capital.

The Bathurst Lumber Company, Bathurst, N. B., have added a fine steel tug to their fleet, having purchased the "Betty D," one of the most powerful boats of her size in the Maritime provinces. She is being fitted out with new boilers and the machinery is being overhauled, so that she will be ready for the opening of navigation next year.

At Truro, N. S., recently, Sheriff McLennan sold at the instance of the Eastern Trust Company, the wood lands, about 22,000 acres, of the Londonderry Iron and Mining Company, Limited. The property was sold for the reimbursement of the first mortgage bondholders, in London, England. It brought $107,850, and was secured by the Maple Leaf Lumber Company, Ltd.

Murray & Gregory, of St. John, N. B., are erecting a mill at English Lake, on the Quebec Central Railway, in Quebec Province, where they have large lumber interests. Their largest mill is at St. John, where they have also a large woodworking factory equipped for a wide range of work, but they have also a sawmill at St. Camille, Quebec. The firm's annual cut is about 30,000,000 feet.

Stanley Douglas of Stanley has a contract to get out and saw four million feet of hardwood at Napadogan for the Partington Pulp and Paper Co. It is understood that the bulk of it will be shipped to the Old Country. It is expected that the Partington Company's lands on the Nashwaak river contain half a billion feet of hardwood lumber, and this is the first attempt being made to put it on the market. A New York manufacturer, who lately visited the locality, declared it the finest hardwood proposition in Canada.

The Gres Falls Co., Three Rivers, P. Q., the St. Gabriel Lumber Co., Ltd., St. Gabriel de Brandon, P. Q., and the Charlemagne & Lac Oureau Lumber Co., Ltd., three Quebec subsidiaries of the Union Bag and Paper Company, New York are to be consolidated into a new concern, the St. Maurice Paper Co., which will be controlled by the Union Bag & Paper Company. A news-

print mill and sulphite mill will be erected by the new company at Cap Madeleine, P. Q. The Gres Falls Co. already has a ground wood mill, which is turning out 100 tons of ground wood a day. The erection of the news and sulphite mills will round out a complete production unit, enabling the concern to turn out the finished product. About 80 tons of the ground wood will be required daily by the company, and the remaining 20 tons will be shipped to the plant of the Union Bag and Paper Co., at Hudson Falls, N. Y. In addition to the newsprint and sulphite plant, it is proposed to construct at Cap Madeline, a kraft mill, the output of which will also be shipped to Hudson Falls. Work will be soon commenced on these new plants. The Union Bag and Paper Company has made arrangements to sell its undeveloped water power at Gres Falls to the Shawinigan Water and Power Company, which will furnish all the power required by the Union Bag & Paper Company. The water power is thirteen miles northwest of Three Rivers, P. Q., on the St. Maurice River.

Western Canada

The sawmill equipment and timber berths of Shaw Bros., Dauphin, Man., will be sold by auction on January 15, 1916.

The sawmill at Fernridge, B. C., which has been closed for over a year is now being operated by a number of Hindoos under the name of the Cheam Lumber Company.

Mutchenbacker Bros., are contemplating the erection of a lumber mill at Mafeking, Man. The new mill will cost $20,000. Work will start next June. The owners will be in the market for general sawmill machinery and equipment.

Sealed tenders are being received up to January 5th by the Minister of Lands for B. C., for the purchase of License X529, to cut 2,200,000 feet of balsam, cedar and hemlock on an area adjoining Lot 489, Nimmo Bay, Mackenzie Sound, Range 1, Coast District. Two years will be allowed for the removal of the timber.

The Benton Pole and Lumber Company, Benton Siding near Erie, B. C., have received an order for 20 cars of poles from the E. T. Chapen Company of Spokane, Wash. The Benton Pole and Lumber Company have bought the mill of Feeney Bros., at Salmo, B. C. They will ship the equipment of this mill to Benton Siding, and use it in the erection of a plant to replace the old mill now in use.

The Pitt River Shingle Mill Company, Port Moody, B. C., have started operating their plant. They have dismantled the old Cutler mill and installed machinery of the latest design. The company will also put in a new dry kiln and engine immediately, also additional shingle cutting machines. Two machines are now operating and in a few months the company expect to have eight machines installed, and an output of 200,000 shingles per day.

The shingle mill of the Raven-Roy Shingle Manufacturing Company Ltd., at Hatzic, B. C., has changed hands and is now being operated by the Munn and Murphy Shingle Company of which Mr. A. E. Munn of Vancouver is president; Mr. H. D. Murphy vice-president and Mr. Ewart V. Munn secretary and manager. Mr. W. D. Raven remains as mill superintendent for the new company. Extensive improvements including the erection of a dry shed are being carried out and the plant is running night and day.

The S. C. Mitchell Company, an extra-provincial company, has been registered to carry on business in the province of British Columbia as lumbermen, loggers and to operate sawmills, planing mills and such other manufacturing plants as may be necessary or proper in carrying on a general lumber and sawmill business. The head office of the company is at 1304 Old National Bank Building, Spokane, Wash., and the provincial office is at Davis Block, Bridge Street, Grand Forks, B. C. Walter Blair Cochrane is attorney for the company. The capital stock of the company is $30,000.

A second English revised edition of "The Utilization of Wood Waste" by Ernst Hubbard, translated by M. J. Salter, has been published by Scott, Greenwood and Son, 8 Broadway, Ludgate, E. C. The book is published in handy pocket size edition and has been brought well up to date. It will unquestionably furnish valuable suggestions to all who are interested in the subject. A large number of excellent illustrations are included. Every manner in which wood waste may be utilized is thoroughly discussed and practical information is given regarding the various processes. The value of the book is considerably enhanced by the inclusion of an extensive index.

The lumber business at Aberdeen, Wash., has been so active lately that the sawmills are face to face with a shortage of logs, and the possibility of several mills having to close down. At least five mills are now running on short time waiting for rafts. There has been so good a demand lately that several mills doubled their output and the small amount of logs placed in the water has brought about the shortage.

Damages to the extent of $3,375 were awarded by the jury in the Supreme Court at Nelson, B. C., recently to Percy Lyon, against the Nicola Valley Lumber Company. Lyon was injured by a log while in the employ of the company. The log broke through the guard rail and rolled down the deck. The damages were awarded under the Workmen's Compensation Act, being the sum of three years' wages upon what Lyons was receiving before the accident.

Twelve French Canadian lumbermen who were cutting timber for contractors employed by the Connecticut River Lumber Company, Colebrook, N. H., have been arrested for alleged violation of the Federal Contract Labor Law. It is alleged that the Connecticut River Lumber Company let out work to a number of contractors who employed Canadian lumbermen to assist in the operations.

Bleeding Staunched Immediately

"A Friend in Need Is a Friend Indeed." The lumberman can find no truer friend than **Douglas' Egyptian Liniment.** Applied to cuts and wounds it immediately stops the bleeding, and defies inflammation, proud flesh, and blood poisoning. For frost bite, toothache, neuralgia and throat troubles it works a quick cure. In the stable its services are invaluable in curing cuts, thrush, sprains, spavins, calluses, etc.

Free samples and literature mailed on request.

Garlock Packings

Are made in over two hundred styles and combinations to meet every known requirement. We will assume entire responsibility in selecting the proper styles and combinations of our packings to work successfully and economically under any stated condition; and if goods are not wholly satisfactory to purchaser we will refund promptly the cost of same. A card will bring our new catalog which fully describes our various styles of packings.

Saved $300.00 Daily In Fuel Bills

Jones Underfeed Stokers in several Pulp and Paper Mills

have made possible fuel savings never before credited any system of firing.

Take as illustration the boiler plants of the Minnesota & Ontario Power Company, Fort Frances, Ontario, and International Falls, Minnesota:

Before the stokers were installed in the latter plant 3,000 tons of coal were required each month, costing them nearly $3.50 per ton. Since installing Jones stokers, under normal conditions, only five tons of coal are burned per week, the balance of heat required being obtained from "hog feed" and paper mill refuse—heretofore a waste product, entailing an enormous and continual expense for its disposal.

The saving is, therefore, 3,000—22=2,978 tons at $3.50=$10,423.00 per month, or more than $300.00 per day.

The equipment is entirely automatic, and should a drop of a few pounds occur in the steam pressure, or should there be a shortage in the supply of refuse, the stokers immediately feed in more coal and the blower equipment supplies more air, so that the normal pressure is promptly restored. If for any reason the "hog feed" is temporarily abandoned, the stokers automatically make the change over, carrying the load with coal alone.

Jones Underfeed Stoker Co., Limited

National Trust Building, TORONTO

Transmit 100% of Your Power

Why pay good money to generate power and then employ a poor belt that will only transmit a fraction of that power.

If you equip your mill with Goodhue Belts you can transmit 100% of the power generated

Goodhue Belts stretch 15% to 25% less than other belts and have just the right amount of "cling" on the pulley.

Write us for particulars and prices.

YOU CAN DO IT WITH— **A GOODHUE BELT**

J. L. GOODHUE & COMPANY, LIMITED.
DANVILLE, QUEBEC CANADA.

Montreal

Caldwell's Molasses Meal

The Ideal Food For Camp Horses

Because it contains the proper amount of sugar necessary for hard working horses.

Because it replaces expensive cereals and gives better results.

Because it is easily handled, requires no diluting with water and prevents waste.

Because it keeps the horses free from colic, intestinal disorders and worms.

Write us for prices. Caldwell's Molasses Meal is a profitable feed investment.

Caldwell Feed & Cereal Company, Limited

The Power of "A Want Ad."

When you have something to sell that another is likely to want, or if you want something, a sure way to get in touch with your party is through a "want ad." This class of advertising the world over is a rapid and positive means of finding your man.

If you have any wants in the lumber business the quickest and most inexpensive way to satisfy them is by advertising in the **Wanted and For Sale Department** of the Canada Lumberman and Woodworker.

Twice a month "the paper with the green cover" brings together buyers and sellers of lumber and machinery from all the principal lumbering centres of Canada and the United States. By covering this wide though specialized field, waste circulation for advertisers has been eliminated.

For quick and satisfactory results, get your advertisement in the **Wanted and For Sale Department** of the

Canada Lumberman & Wood Worker

A Test In Your Workshop

will convince you of this fact:

That it is cheaper to use two files where you now use only one.

Take a certain piece of work and give one man a new file, and another a half worn file on a similar piece of work.

The man with the new file is doing what you are paying him for. The other man is filing away your time.

The man with the new file takes a pride in his work.

The man with the old file starts with a grouch, and the work suffers.

When the inefficient point in the files is reached it is good policy for you to have your men discard them.

And they should be replaced with the five famous brands:

KEARNEY & FOOT
GREAT WESTERN
AMERICAN
ARCADE
GLOBE
(Made In Canada)

Made in Canada by a plant controlling 90% of the file business.

Backed by 50 years' experience in the making of efficient files.

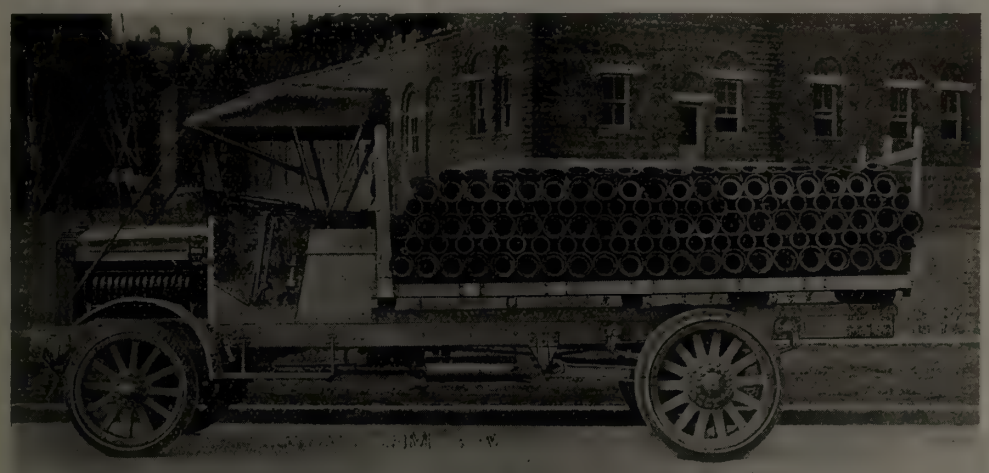
The National Truck



Specifications in Brief:

MOTOR—the famous Waukesha.

TRANSMISSION
Our own design. 2 and 3½ ton Models, 4 speeds forward and a reverse. Transmission is placed midway between rear axle and motor.

CLUTCH
Enclosed dry-plate variety.

IGNITION
Dixie Bosch or Eiseman, high tension. Independent.

CARBURETOR—Zenith.

RADIATOR
On both 2 and 3½ ton models, is of built-up type, having cast top, bottom and sides, enclosing fin and tube centre core.

STEERING GEAR
Is of the Worm and Nut, fore and aft type.

FRONT AXLE—Timken.
2 x 3 in. I-beam section.

REAR AXLE
Is the well-known Timkin, David Brown worm drive.

SPRINGS
Are semi-elliptic front and rear, and are of silico-manganese steel, self lubricated.

WHEELS
Best oak of artillery design with squared spokes, 14 to the wheel. Front wheels 36 x 5, rear, 40 x 5, dual.

TIRES
36 x 5 in. front. 40 x 5 in. dual, rear. Solid rubber and demountable rims.

FRAMES
High carbon, open hearth ship channel. Cardan shaft is tubular, made from seamless, drawn-steel tubing of .35 carbon steel, heat-treated.

EQUIPMENT
Three Adlake pressed steel truck lamps, jack and a full set of tools.

1000 lb., 1500 lb., 4000 lb. 7000 lb. capacities

National Trucks are built to do a Truck's work. The rugged construction of every part of the Truck is a revelation in advanced Motor building. While strength is a prominent feature, care has been taken not to create excessive weight. National Trucks are proven by day after day service, crrrying usual loads and under usual conditions—the absolute test of reliability. Economy in operation, minimum of repairs, our own guaranteed Service Stations and the best Truck that money can buy is what you get when you purchase a National Truck.

Enquiries regarding the National Truck should be addressed to Hamilton office. Complete illustrated catalogue with full particulars will be gladly mailed to interested firms.

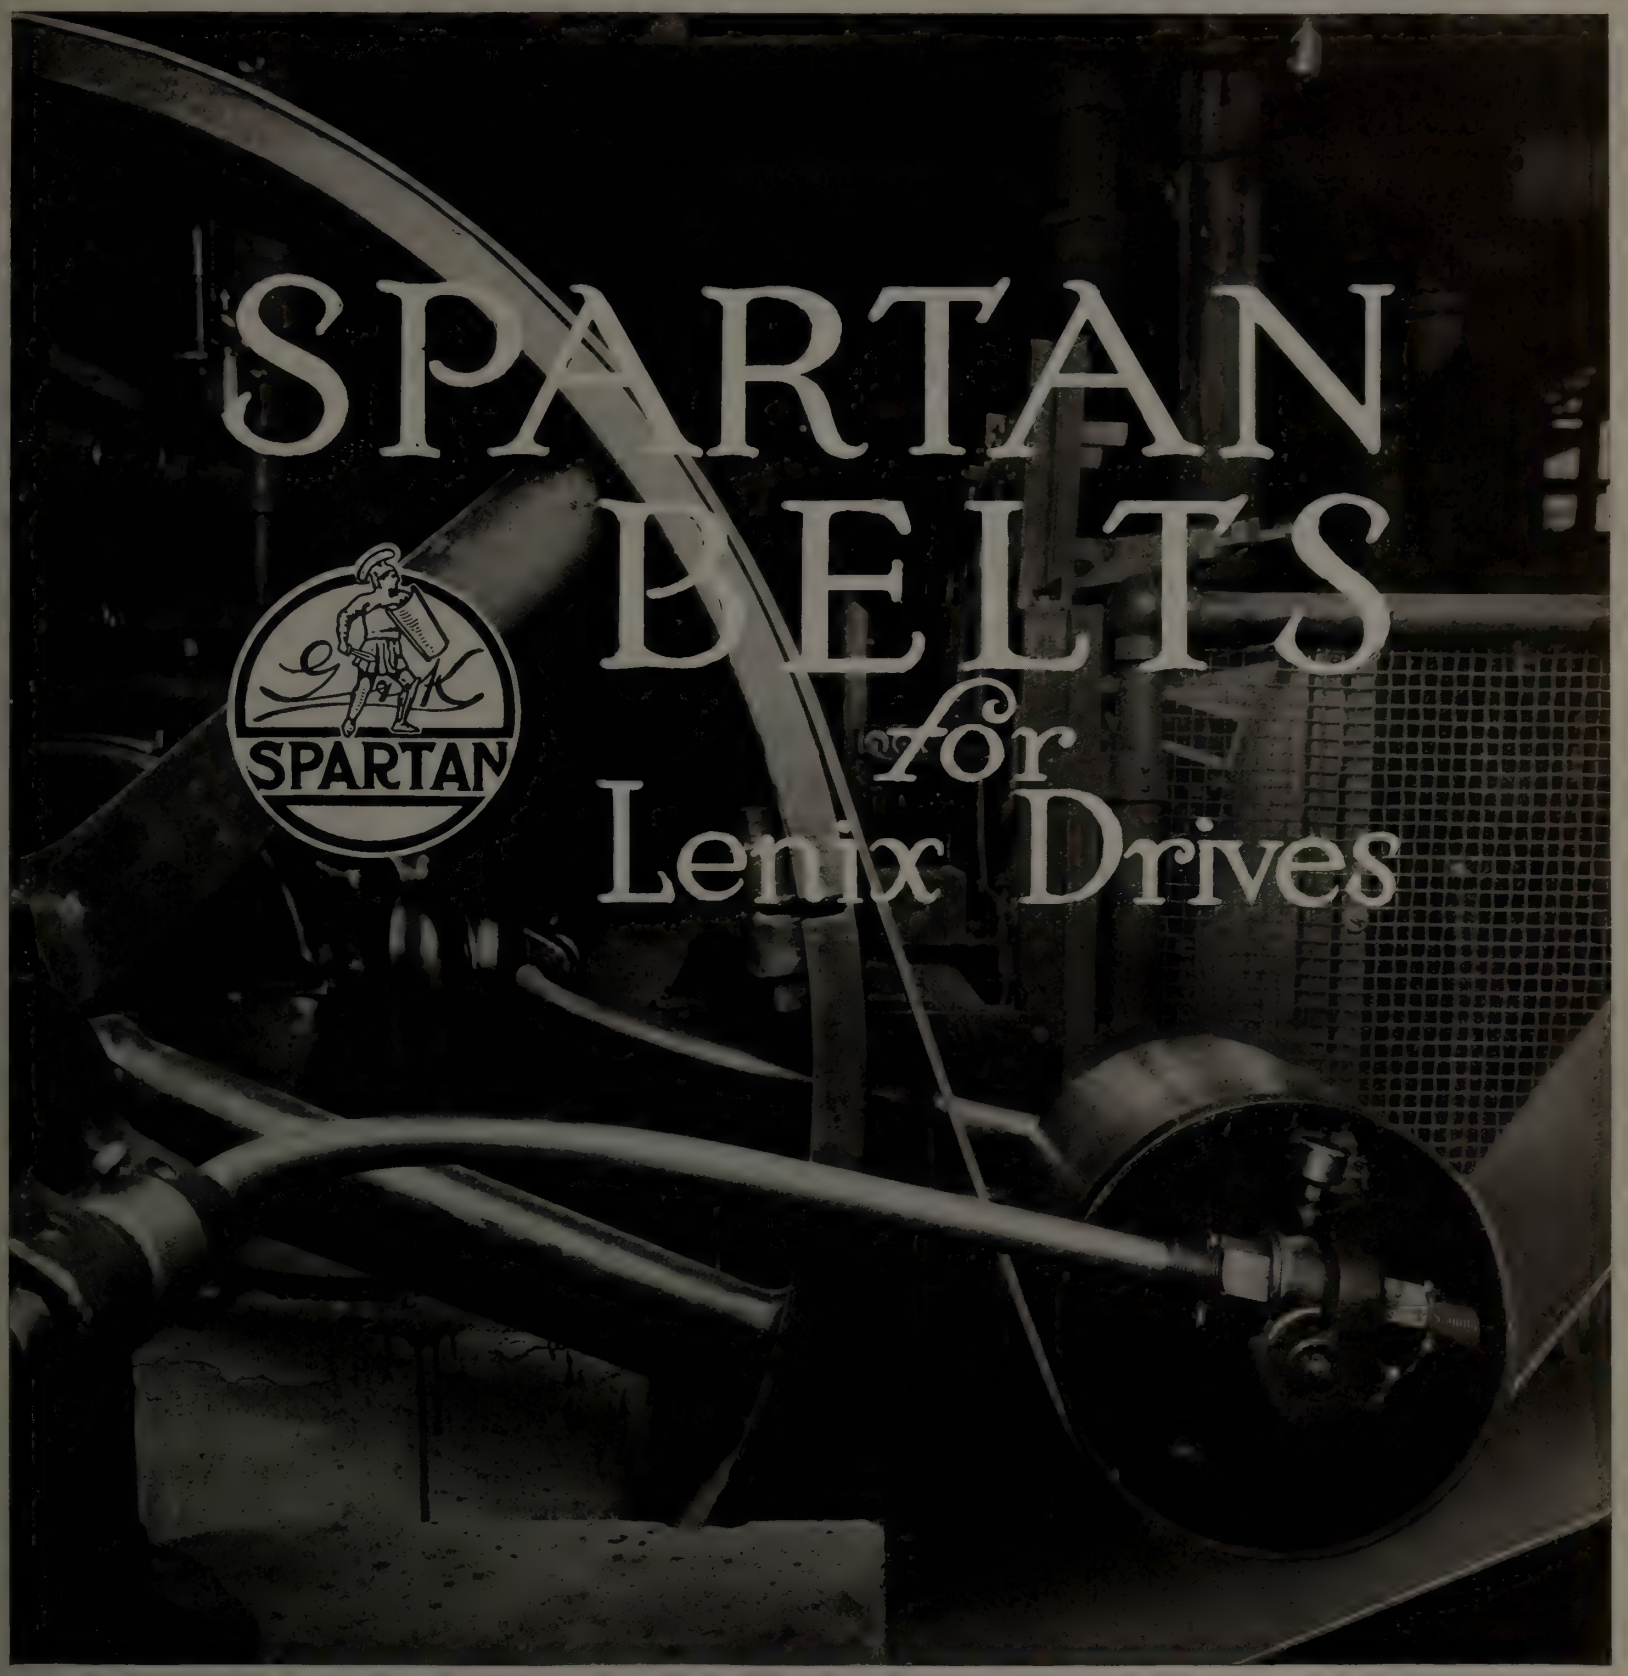
(Continued on page 68)



HERE is a 10-in. Spartan Double Belt driving an air compressor in the engine room of the Norton Company, Worcester, Mass. The belt operates at a speed of 2,350 R. P. M. from a 10-in. motor pulley of 900 R. P. M., under a 12-in. Lenix Idler, to a 54-in. pulley on the compressor—only 6-foot pulley centers, and transmitting 75 H. P. Furthermore, the compressor is equipped with an automatic starting and stopping device, which naturally subjects the belt to an intermittent load—jumping instantly from no load to full load.

Norton's Chief Engineer states—"we have done absolutely nothing to the belt since installed, it is giving perfect satisfaction." Spartan proved particularly efficient because of its unusual strength, great pliability, and pulley grip, which enable the belting to transmit power with great economy.

Spartan Belting is equally efficient for use wherever conditions are unusual and difficult. Let us demonstrate why it is the belt for your requirements.

We make a Specialty of

Conveyor Chains

For Lumbermen

WE make them from carefully-selected iron, and every link is guaranteed ***strictly hand-made***—not the inferior machine-made.

The point is worthy of special emphasis.

We make the chains according to any dimensions desired, guarantee splendid workmanship; uniformity; dependability.

Prices are the lowest possible for the class of work we furnish, and Quality above criticism.

Let us quote for your needs.

Send for catalogue giving estimated weights of various sizes of chain; prove test; breaking, straining and safe-working loads, and giving hints regarding the care of chain which will prolong a chain's usefulness.

Logging Locomotives

Made in Canada

Our fifty years' experience in the design and manufacture of logging locomotives is at your disposal. Many of the largest logging operators in Canada are using our "Canadian Made" locomotives.

Our logging models are as carefully designed and built as our 200 ton sizes—oil or coal burning.

MAY WE SEND YOU SPECIFICATIONS?

This engine is 13½ ins. x 18 ins. and weighs 35 tons.

LOGGING LOCOMOTIVES

The designs of our Logging locomotives are the result of wide experience, extending over a period of 80 years.

The material used in their construction is thoroughly tested and is the best of its kind.

All details are accurately finished to standard gauges and are absolutely interchangeable on all locomotives of the same class and size.

This cuts out long delays at critical times of the work, as parts liable to wear can be kept on hand or shipped promptly from our works.

The Story of Plymouth Rope

Ninety-one years ago this spring the first Plymouth Rope was turned out, on the site where now stands the world's largest cordage factory and by the company whose success has built that factory and kept it steadily busy making the same high grade of rope.

The story of this substantial business growth, in which Plymouth Rope has come to be recognized as the world's standard of quality, is an interesting narrative. And the story of the rope itself is still more interesting.

The series of advertisements, of which this is the first, will describe the things which make Plymouth the standard, will illustrate how that standard works out in actual practice, and will show what it means to you as a user of rope.

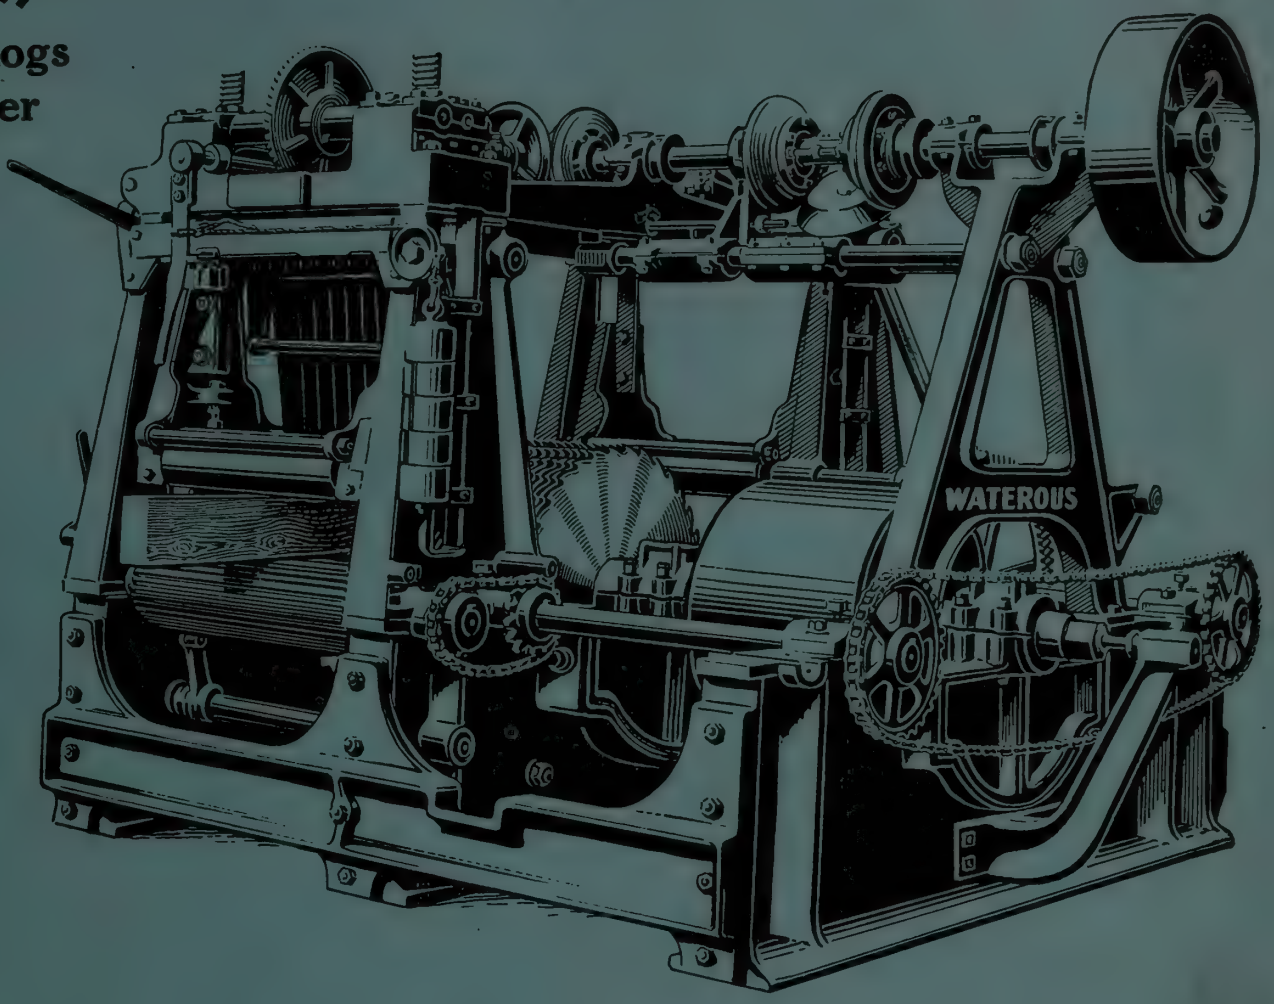
Cut Those Small Logs Into Perfect Lumber Economically—



With The "1916 Model" Kendall Circular Gang

The Kendall Circular Gang meets the demand for a machine to turn small logs into merchantable lumber economically—*profitably.*

Having an enormous capacity as compared to the Band Saw or Circular, this machine, by reducing the time of handling small logs, keeps up mill production and keeps down costs.

The Kendall Circular Gang takes cants from 4 in. to 12 in. thick, and at the rate of 2500 to 3000 a day turns them into lumber, perfect in finish and cut evenly from end to end.

Other Gangs will cut lumber fast, but none of them can equal the Kendall on *quality* of lumber sawn.

The "1916 Model" machine is the latest development in the Kendall patents. New features that mean increase in capacity, increase in cutting quality, greater safety and convenience, have been added.

Let us show you why it will reduce lumber sawing costs for you.

A Letter

"We have sawn as many as 2,500 logs in 10 hours, and if we could keep the Gang running without any stops or delays we could run 3,000 through it in 10 hours. But taking into account delays, changing saws, etc., we can easily saw over 2,000 cants per day. We run five logs per minute, which is about 65 to 75 feet feed per minute. It does not make any difference what sized cant we run, the feed is the same. We run 11-in. cants when our saws are full size and only 10-in. after the saws are worn down too much to take 11-in. cants.

We have been well satisfied with our Circular Gang and would certainly advise any person requiring a machine which puts out a lot of lumber, to install one. This Gang does not only cut up a lot of lumber, but it cuts it even from end to end without any variation in thickness, which no Band Saw will do, neither any Circular Saw."

"FROST KING" METAL

$5,000,000.00
worth of mixed metal sold annually.

Our thirty-five years experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. **Price 30c per lb.**, Fort William and East; West of Fort William **35c per lb.**, delivered nearest railway station, packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our FAULTLESS BABBITT will stand where all other metals will fail. Price, Fort William and East, **40c per lb.**; West of Fort William, **45c**, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

HOYT METAL CO., Toronto, Canada

Have factory and office at Eastern Avenue and Lewis Street, Toronto, Canada

Factories also at:— New York, N. Y. London, Eng. St. Louis, Mo.

Not altogether what we say but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

Alphabetical Index of Advertisers, Page 54 Classified Directory to Advertisements, Page 60

A waterproofed leather belting made from the very best materials in the very best way—with a surface that "grips" the pulley.

Ensure Efficiency

by using

A Good Belt on a Good Machine

If you are proud of the good machinery you possess, it is surely a pity—to say nothing of poor business—not to get the most out of it.

And you are not getting the most out of it unless you use "Amphibia" belting to drive it.

"Amphibia" has a surface and flexibility which make it the most efficient and "gripping" belt on the market.

By adopting "Amphibia" belting you ensure your machinery working at its maximum efficiency; you prevent the loss in transmission of valuable—and costly—power because you are using a medium of transmission which is perfectly designed for its task; you do away with the expense involved in the readjustment necessitated by the "stretching" of belts; you obviate the cost of renewals, because "Amphibia" is made from the best of butts procurable and is tanned in our own tanneries by a secret waterproof process which renders the leather impervious to oil, steam, water and fumes.

Your "economy" in buying a cheap and common belt to drive a costly and high-class machine is a false economy—and bad business. Try a sample run of "Amphibia" and prove it.

"Leather like gold has no substitute."

FOR SALE: Machinery and Timber

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the town of Parry Sound, Ont.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Special bargains in the townships of Burpee, Falconbridge and Street for small mills.

We have the following Sawmill Machinery for sale:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

All of the above open for inspection at Parry Sound.

To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

ARKANSAS SOFT PINE TRADE MARK

What You Dealers Have Always Wanted

of course is a lumber which will lift you out of the turmoil of price competition, and place you and your merchandizing methods on a higher level.

You would naturally prefer to be known as the merchant who sells a material of established value, for which you charge a fair and deserved profit, and in consideration of which you deliver value received to the purchaser.

Arkansas Soft Pine

will help you to this position.

WHY?

Because it is a wood of specific superiority for particular uses, and as such is nationally advertised. It is moreover, identified by trade mark which implies that it must adhere to set standards of excellence in quality and manufacture.

The foregoing facts are in the consumer's mind when he comes into your office. Consequently when he (your buyer) asks for Arkansas Soft Pine, he does so because it is the wood he wants. Price is a secondary consideration.

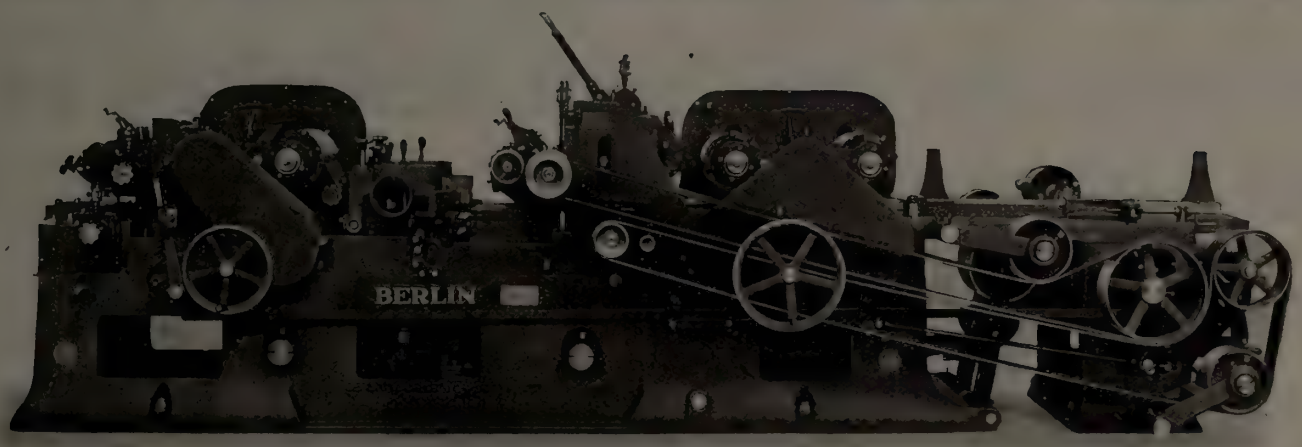
A Cutter Head That Holds Its Balance

With all knives in position and clamped, no open slots or gaps are left to weaken the Berlin Round Head. Each knife with its clamping gib closes its slot in the head **completely**; their faces bear against the metal of the head its full width, and form a **continuous ring of steel** that reinforces the cutter head at all points and makes it practically as strong as a solid steel cylinder of the same diameter, thus reducing to a minimum all chance for distortion of head or knife due to abnormal tightening of the clamping screws.

This closed knife-slot feature of the Berlin Round Head has a further advantage in the working of pitchy or gummy lumber. By the absence of open slots in the head, the intrusion of pitch and its accumulation in the knife slots is effectually prevented, and frequent shut-downs for its removal, followed by resetting and regrinding of knives, are avoided.

It is this type of head—the strongest and heaviest round head ever built—that is used on the

Berlin No. 91 Planer and Matcher



It guarantees straight knives and perfect balance, requires little attention and means a bigger and better day's work.

These are mighty important considerations alone but there are scores of other reasons why you should select the "91" Matcher.

Our Special Book "A91" contains a wealth of information on the subject of matcher heads of all descriptions together with a treatise on the latest methods of knife setting, jointing and grinding as now applied to all Berlin Matchers. A request on your firm's letterhead brings a copy without expense.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 36 Toronto, January 15, 1916 No. 2

Shell Box Patronage in a Cabinet Minister's Constituency

The publicity which we have given recently to the manner in which many shell box contracts were let by the Shell Committee has met with approval from our readers in all parts of Canada. From the letters we have received regarding this matter, we are convinced that nearly everyone who is interested in the production of boxes of any kind has come across instances similar to those we have already described, in which contracts have been let to parties who are not in any way entitled to them, while others, well equipped, with their machinery idle and their men out of employment, have been unable to get contracts.

Although we have published the facts in connection with several of these cases, nothing has been done by the Government in the way of investigating the situation. The facts which have come to our attention unquestionably indicate the necessity for an investigation. The reports we have published disclose a state of affairs that is intolerable, namely, the giving of contracts for the production of shell boxes to political friends who are in many cases without the necessary experience or equipment, while firms which are justly entitled to secure contracts because of their experience and equipment, have been neglected in spite of their repeated applications for the business.

In times like the present, the first consideration in the giving of contracts by the Government should be economy and efficiency. Political consideration should never be permitted to enter into the letting of contracts for shell boxes or for anything else, yet we find case after case in which only an investigation will ever convince us that political considerations have not been the chief factors. An instance which has come to our attention recently is similar to others we have already reported. We have enquired into the circumstances of this case and believe that the following is a plain account of the facts:

A contract for 5,000 shell boxes to hold four 18-lb. shells and fuses, at $2.50 per box, was secured by C. W. Burgoyne, of Fenelon Falls, Ont., which is located in the Dominion riding of Victoria, which included shipment to the point designated for delivery. C. W. Burgoyne, who secured this contract, is in partnership with his father in the firm of W. Burgoyne & Company, which carries on a general store business at Fenelon Falls. Not being in a position to manufacture the boxes himself, we are informed that he was willing to sub-contract with anyone who would undertake to handle the contract or parts of it. The contract was finally allotted to Mr. Alfred Tiers, of Fenelon Falls, who conducts a small planing mill at that place. This contract has now been completed and the boxes were delivered some time ago.

While this contract was being worked out, an additional contract for 25,000 boxes was secured, according to our information by C. W. Burgyone, and this also was taken over by Alfred Tiers. We understand that this contract was known as an optional one, which we suppose means that Burgoyne was at liberty to take it or leave it, as he desired. It included the stipulation that no more than 3,000 boxes were to be paid for in any one month. The price for this box was a trifle less than the price for the box covered by the first contract. By the end of the year 3,000 boxes had been produced under this contract. We are informed further that Tiers was not able to fill the first contract entirely by himself, but purchased the tops and bottoms for a number of the boxes, securing them at 14c. per pair; and that in connection with the second contract he is purchasing the ends ready to be dovetailed, at 5c. each, securing them from a manufacturer at Lindsay.

Two or three things stand out clearly in connection with this case. In the first place, the contract was apparently secured through personal or political influence by a party who had no apparent right to it. In the second place, the contract was apparently handed on, or sublet, to Tiers, a proceeding which is understood usually to involve remuneration to the first party, although he actually produces nothing. In the third place, another contract for a much larger quantity of boxes was secured by the same parties. We cannot see how such methods of handling the shell box business can be justified. Even in ordinary times, the letting of contracts in this way could not be defended, and at a time like the present it is quite indefensible.

The suspicion that this contract was handed over by Burgoyne to Tiers for a definite monetary consideration is strengthened by the fact that these two parties formed a partnership under the name of C. W. Burgoyne & Company. Evidently they wished to give the transaction a more respectable appearance; but we cannot see how this can be considered as lending the affair any respectability. It amounts to the same thing in the end, namely, that a party quite unable to produce the boxes, secured the contracts and turned them over to another party. The fact that he entered into a partnership with Tiers indicates rather clearly that he did so in order to make it appear that he was entitled to a share of the profits which he was securing and towards which he had contributed nothing. When one considers that throughout Canada there are hundreds of planing mill plants which have suffered heavily through business depression and would be greatly benefited by securing shell box contracts, he is thoroughly justified in criticizing a government which has permitted the letting of contracts in such a manner.

What can the public think of such proceedings as these? There is one conclusion which is being very generally drawn, namely, that the giving out of shell box contracts has not been in the interests of economy or efficiency, or in the interests of the legitimate box making or planing mill industries, but has been used as a means of distributing favors to political friends. Nothing whatever has been done in the way of holding an investigation into these matters. The Commission which has been enquiring into the letting of various war contracts has been devoting its attention to other matters, the reason given for not including box contracts being that the scope of the Commission does not entitle it to investigate such matters.

The cases we have referred to in previous issues and in this issue seem to us to carry clear conviction of improper methods and to demand an investigation. We do not think the Government will actually seek to avoid such an investigation on the ground that the

Shell Committee was spending British money and not Canadian money. Theoretically there may be reason for taking such a position, but no government which is jealous of its good name can afford to stand idly by and see shell box contracts given to its friends who are not entitled to them, while others who are well entitled are neglected. The Government has definite powers to order an investigation into these matters and to bring out the facts.

What the public wants to know is whether the letting of shell box contracts has been used to promote the interests of a political party. We believe that many contracts have been so let and that it is incumbent upon the Government to throw light upon the whole situation. Such information as we have gathered upon the subject is at the service of the Government any time it desires to open an investigation which shall be thorough and impartial. Our object is to help in clearing up a most unsatisfactory and intolerable situation. The cases we have already referred to cover a large part of Ontario and part of Quebec and they strongly suggest party patronage in the giving out of contracts.

Low Stumpage Values Restrict Scientific Development

In Ontario one of the most frequent remarks heard among lumber manufacturers relates to the high price of stumpage, compared with the low price of the finished product. By stumpage price in this case is meant the cost of the standing timber to the manufacturer and there is no doubt that, in view of the price of lumber, the cost of the standing timber in Ontario has been excessive for many years. The value of stumpage to the man who has secured it, is quite a different thing from its cost, and the variation in these two factors has much to do with our forestry and lumbering situations. The low level of stumpage values in this country is the greatest hindrance to the progress of forestry. Not until the timber owner can secure for the sale of his product a price that makes his stumpage value much greater than it is at present, will he be inclined to give to forestry questions more than a passing consideration. If the foresters of Canada want to make more rapid progress this is the feature of their problem that they must attack most seriously. Dr. J. F. Clark in a recent discussion brings out this point strongly. Stumpage, he says, is that which remains when the cost of marketing the forest product has been paid out of the returns from the sale. Obviously, there are but three ways of increasing stumpage values, namely, by raising the price of the product, by eliminating waste, or by reducing the costs of marketing. Unhappily, the price of lumber, the main forest product, is determined by a great variety of considerations, most of which are wholly beyond the control of the friends of the forest.

The utilization of materials previously wasted makes slow progress. There have not been nearly so many by-product developments as could be wished, and every step in advance—no matter how rich in early promise of good financial returns—largely defeats its own hopes on account of the overwhelming supply of raw materials on the one hand and market limitations for the product on the other. Until lumber prices substantially and permanently advance, the main hope of bettering forest finances, and thereby widening the field where forestry may be practised, rests in lowering the costs of marketing the forest crop. The cost of marketing the forester's crop may be roughly divided into logging costs, milling costs, lumber transportation, and selling costs.

The sawing and finishing of lumber, together with lumber transportation, have already been highly standardized. No doubt many further economies will be effected in these departments from time to time. A start, which has every promise of large results, has already been made in the, heretofore, much neglected field of lumber salesmanship. But perhaps the largest field for economies is that of logging, and the hope for greater efficiency in this quarter is in the development of the art of logging engineering.

As agriculture calls to its aid so much of the sciences of chemistry, physics and biology, so the logging engineer, in the development of his profession, takes toll from the whole field of mechanical science, and calls for much of the best that has been produced by that modern alchemist, the metallurgist. No occupation calls for greater resource and adaptability. Every logging unit differs from every other in the complexity of variations in topography and stand; of the thousand ways in which logging may be done there are not many profitable ways, and there is, of course, only one best way. The man who knows and can effectively carry out one or more of these better ways is a potential logging engineer.

The successful logging engineer of the past has compelled success by a more than average ability and adaptability. How may the average logging foreman improve his methods and thus take the first steps to qualify as a logging engineer? Must it not be through bringing to him the results of the best thought of the thousands of men who are devoting their lives to this work?

The graduate of the forest school, with a special training in the department of logging engineering, may hope to be of considerable service to a logging company from the start, but, to be of the greatest service in the end, he must be willing to start his practical apprenticeship at the bottom and work up.

That these ideas are not fanciful or merely theoretical is amply shown, as Dr. Clark points out by the numerous examples in Europe. where labor is much cheaper and stumpage values are several times higher than with us, and where forest properties may be maintained on a perpetual yield basis and pay a fair return on the investment. In a large measure the solution of the problem in this country will be found in the development of the art of the logging engineer.

U. S. Trade Envious of B. C. Progress

The activity of the lumbermen of British Columbia in co-operation with the Provincial Government in developing export markets for the lumber products of that province have not only brought definite and practical results, but have stirred up much envious enxiety among the lumbermen of the Pacific Coast States. An indication of this feeling on the part of Pacific Coast lumbermen in the United States is afforded by the testimony given recently by Hon. Joseph N. Teal, of Portland, Ore., when addressing the Federal Trade Commission in a recent hearing at Washington.

The question of Canadian competition was considered at some length by Mr. Teal, who spoke of the great co-operation between the lumbermen of British Columbia and their government, characterizing it as a regular "partnership" between the two parties. The officials in British Columbia, he said, were "progressive and awake to the opportunities of the day." Developing the idea further, he said that after the war there was little doubt that a commercial unit would be formed, just as now there was a fighting unit, the object of the commercial co-operation being to lay the foundation for a preferential tariff.

Referring to the situation in the Northwestern States in regard to Canadian competition, Mr. Teal said:—

"To the north an active, virile commonwealth, producing the same commodity and competing in the same markets, is aiding its own lumber industry in every reasonable way. British Columbia competitors enjoy not only the same rail rates to the markets in the United States, to which fact reference has been made, but by reason of the operation of our navigation laws such competitors can charter ships under any flag in normal times for delivery at any port in the United States on the Atlantic coast at from $2.50 to $3 a thousand feet less than the shipper in the United States. Some preferential tariffs are

now in effect between Canada and other British colonies, and the establishment of such tariffs between all the British possessions is being urged with vigor."

Referring to the export trade situation, Mr. Teal said:—

"In the past the Pacific coast states have done by far a greater export business than has British Columbia. It must not be assumed, however, that this condition will continue unchanged.

"The war, while affecting this country as all others, has necessarily borne harder on Canada than on us. But some day—and God speed the day—the war will end, and it may be accepted as a certainty that everything an intelligent government can properly do will be done by Canada and by every other country engaged in this war, to rebuild and reconstruct their industries and to heal their commercial wounds. It would, therefore, seem that simple, ordinary prudence and business sagacity should impel the Government of the United States in like manner, and with like persistence to aid, foster and further its own industrial and commercial interests."

Mr. Teal also discussed the shingle industry, which, he said, had not been a paying one, the main cause being competition from B. C. "No branch of the lumber industry in the northwest has been the subject of more thought and discussion than that of shingles," he said, "and yet, notwithstanding the product is an article of common use and the business one of some years' standing, it is putting it mildly to say that it is in a very unsatisfactory condition. Wide fluctuation in prices and unstable demands, with more or less demoralization as a result, have been the history of this branch of the industry since its inception. Various reasons have been assigned in explanation, and many have studied the subject in order to find a remedy for a condition which all concede exists."

"The testimony of those engaged in the industry shows that, taken as a whole, the business is not only not profitable, but is being conducted at a loss. The northwest states produce red cedar shingles. In 1912 cedar shingles represented 78.9 per cent. of the entire production of the United States, and the State of Washington produced 84.2 per cent. of the cedar shingles and 66.4 per cent. of the total shingle output of the United States."

A higher grade of shingle was made in B. C., Mr. Teal said, than in the United States. He hoped that this would continue to be the case, so that the competition on the low grade would not be so keen. However, he said, there were already some concerns in B. C. making a low grade shingle.

"The British Columbia manufacturers as yet make on the whole a higher grade shingle than is made in Washington, but some of the newer mills are now manufacturing practically the same grade. The tendency, moreover, on both sides of the line, is gradually to approach the same standards. That is, in Washington there is a decided trend towards higher grades, better grading, more careful packing, and better manufacturing, while in British Columbia there is a tendency to produce larger quantities of the medium grade."

Taking up the question of the advantage under which the British Columbia mills work as regards raw material, he said:—"There is no question but that British Columbia has a decided advantage in the raw material, it being estimated that this advantage in itself represents about 25 cents a thousand feet; also in the shingle mill about 75 per cent. of the labor is oriental. The labor cost, besides, is somewhat less in British Columbia than in the United States. Attention has heretofore been directed to the active interest the British Columbia Government takes in promoting the lumber industry. It is but current legislative history of the United States that while formerly foreign shingle manufacturers paid 30 and 50 cents a thousand duty, shingles now enter free. The shipping laws, particularly as affecting shipments to the Atlantic coast by water, work as much hardship to shingles as to lumber; and under existing laws, with normal conditions, the British Columbia manufacturer has an undoubted advantage on shipments via the Panama Canal. While as yet the movement of American manufacturers to British Columbia has not assumed large proportions, it is, nevertheless, in progress."

Government Co-operation Helping the Trade

One of the surest ways of getting a man's business is to give him more than he expects, or more than he has been accustomed to getting for his money. It is not possible to give him continuously more in the form of goods than he pays for, but in the shape of useful information one may often give a customer something the value of which cannot be estimated in money. This is the keynote of modern selling methods. Its importance is being recognized and its principle put into practice in a large way by the Department of Lands of B. C., by distributing among the farmers, and the retail lumbermen of the prairie provinces a series of bulletins about farm buildings. Each of these bulletins contains complete information, details and plans in connection with a definite class of farm buildings. The latest bulletin is concerned with implement sheds and granaries, and while the information given is applied specifically to the farms of the prairie provinces, it can be taken profitably to heart by the farmers in eastern Canada as well. The introduction to this bulletin is in part as follows:

The depreciation of farm machinery on the prairies, due to the lack of housing and care, is as great as that due to the actual use in the field. When a machine is not properly housed and cared for, it loses at least ten per cent. of its value each year. The average life of a binder, for example, is almost doubled by protecting it from the weather. Recent investigations made by the Commission of Conservation show that the majority of western farmers do not appreciate these facts. Out of nearly 100 representative farmers visited in different parts of the Prairie Provinces, only a few were found who kept their implements and machinery under cover and painted.

This is the more unfortunate because the matter is of particular importance on the prairies, where more farm implements are used than anywhere else in Canada. The Dominion census of 1910 gave the total value of the farm implements in Manitoba, Saskatchewan and Alberta as $110,000,000, or over forty per cent. of the total value of the implements on all the forms of Canada. The total number of prairie farms was 203,000, and the average value of implements per farm was $540, as compared with the average for all Canada of $360 per farm. Proper care in the way of housing and painting, etc., would effect a saving on the average prairie farm of at least ten per cent., or $54 each year, and in many cases a great deal more.

As a rule it is most desirable to make the implement shed a separate building, the advantages being greater convenience, better appearance, lesser fire risk, and ease of enlargement. Space in barns is generally too expensive and inconvenient for storing the implements. A narrow shed may, of course, be built on the side of a barn, but has the disadvantages of greater fire risk, difficulty of enlargement and darkening that side of the barn.

A workshop equipped with carpenter and blacksmith tools is very useful, especially on farms a long distance from town, and at critical times such as harvesting, when long delays for repairs would be ruinous. All the necessary tools can be obtained generally for around $50. The workshop may conveniently form a part of the implement shed.

During winter all implements should be carefully overhauled and made ready for work in the spring. It is a good plan to put a tag on each machine when its work is finished for the season, stating just what repairs and adjustments are required, so that any necessary new parts may be procured and repairs made before it is needed again. In order to prevent rust all bearings and wearing parts should be thoroughly oiled the last day the machine is used.

Paint protects both iron and wood from the weather. It fills the pores and cracks, prevents checking, prolongs the life of the machine and much improves its appearance. For the woodwork, a mixture of pure linseed oil with red or white lead and a small proportion of liquid dryers is good. Raw linseed oil may be used alone, allowed to soak in and dry and followed by a coat of paint. The paint, of course, should always be of a kind suitable for outdoor use.

Lieut. H. W. Larkin Enlists in Field Artillery

Lieut. H. W. Larkin, Toronto.

The accompanying portrait of Lieut. H. W. Larkin, will be recognized by a great many members of the lumber trade in Ontario on account of Lieut. Larkin's connection with the C. A. Larkin Lumber Company Ltd., wholesale lumber dealers, Toronto. Lieut. Larkin is one of the large number of lumbermen throughout Canada who have enlisted to serve Great Britain in her present crisis. He was born at Brandon, Man., on January 13th, 1887, and is a son of Mr. C. A. Larkin, president of the C. A. Larkin Lumber Company Ltd. In 1891 the family moved to Toronto.

Lieut. Larkin's education was received at Upper Canada College, which he left when 19 years of age, in order to take a position in his father's office. When the business was incorporated in 1909 Lieut. Larkin was made secretary treasurer of the company. He has had a wide experience in the lumber business, covering all departments of the wholesale trade, and he possesses an intimate knowledge of lumber grades and values. During the last two or three years he has taken an active part in the management of the business. It was intended that he should succeed his father as manager at an early date. This plan however, has been laid aside temporarily and Lieut. Larkin recently attended the Artillery course at Kingston in order to qualify for a commission. He is now attached to the 30th Battery of Field Artillery which is in training at Exhibition Park, Toronto.

Not Representing Belgian Government

A report was recently published in the press of the Southern States to the effect that the Belgian Government had sent H. Helaers and John Schobben to the United States to obtain material for 10,000 five roomed houses, material for trench timbering and about 1,500,000 railroad ties, as well as other items, totalling in all some 100,000,000 feet. Special enquiries have been made for the Canada Lumberman by the Department of Trade and Commerce in regard to this report and we are advised that when Messrs. Helaers and Schobben arrived at New Orleans, the local papers interviewed them and exaggerated their importance by representing them as official agents of the Belgian Government. They explained to the Belgian Consulate at New Orleans, however, that they had come out on their own accord and were endeavoring to secure orders for American goods from the French and Belgian Governments. They recently purchased 80,000 railroad sleepers. We understand that the same Mr. H. Helaers recently visited Winnipeg, Man., and is studying the possibility of opening up trade in lumber, etc., between Canada and Belgium.

Lumbermen and Foresters Meeting at Ottawa

The series of meetings to be held this month at Ottawa, in connection with lumbering and conservation interests are attracting attention from all parts of the Dominion. The attendance is likely to be larger than in past years when the meetings were held at different dates. The Canadian Lumbermen's Association will hold a full day's discussion of business conditions on January 19th, at which reports of officers will be received, the 1916 officers elected, and a number of addresses delivered. The same evening will witness a joint banquet in which the Canadian Lumbermen's Association, the Commission of Conservation, the Canadian Forestry Association and the Canadian Society of Forest Engineers will participate. Hon. Arthur Meighen, Solicitor General will speak as the special guest of the lumbermen.

The Conservation Commission will meet on the 18th and 19th, the Canadian Forestry Association on the 20th, and the Forest Engineers on the 18th, thus grouping together a series of important meetings dealing with more or less allied topics. Hon. W. R. Brown, of Berlin Mills, N. H., will address the Forestry Association on "Closer Utilization of Forest Products" and other addresses will be given by S. L. de Carteret, President of the St. Maurice Forest Protective Association, R. H. Campbell, Director of Forestry for Canada, and E. J. Zavitz, Provincial Forester of Ontario.

Mr. William Rutherford, of Wm. Rutherford & Sons Company, Limited, Montreal, has been selected by acclamation a member of the Westmount Board of School Commissioners.

Lieut.-Col. Gilbert in Command of 117th Battalion

Lieut.-Col. L. J. Gilbert, Bishop's Crossing, P.Q.

Many prominent lumbermen have enlisted to take their share in the task of defending Great Britain against the armies of Germany. We have had the pleasure of publishing a number of portraits and descriptive articles in regard to well known lumbermen who are thus helping Great Britain. The accompanying portrait is of Lieut.-Col. L. J. Gilbert, officer commanding the 117th Eastern Townships Overseas Battalion, C. E. F. Lieut.-Col. Gilbert was born on June 2nd, 1870 at Bishop's Crossing, township of Dudswell, P.Q. He received his early education at the local high school and at the Cookshire Academy. The greater part of his early life was spent on the home farm and during several winter seasons he was employed in the office of J. O. Gilbert & Son, lumber manufacturers, Bishop's Crossing, P. Q., who are well known to a large number of our readers.

Col. Gilbert's ability as a military officer has brought him an enviable record. He joined the 58th Battalion of Infantry as a private in 1888. He was appointed a provisional lieutenant in 1895 and captain in 1898. Upon the conversion of the 58th Battalion into the 7th Hussars he received the rank of major. In 1912 he became Lieut.-Col. and in 1915 he was made brigade major of the 3rd Eastern Townships Mounted Brigade. He successfully passed the Militia Staff Course in 1914 and is therefore entitled to the use of the letters M. S. C. after his name. In 1914 he was presented with the Colonial Auxiliary Officers' Decoration by his Royal Highness the Duke of Connaught.

Col. Gilbert's command now consists of 12 townships, forming what is known as the "Eastern Townships" and his popularity is evidenced by the fact that in his "Overseas Battalion" he will have serving under him five Lieutenant Colonels, several Mayors serving as Captains and several Captains who have enlisted as Lieutenants.

Huge Trade Coming to Canada

A cable from London, Eng., to the Toronto Star on January 4th said: "Forty million dollars worth of lumber is the estimate given by a Professor of Forestry who has been on the British purchasing commission for the allies, as the amount of orders given or about to be given in the Dominion. The war has caused a tremendous famine of all kinds of wood, he declared. It is being destroyed day by day on all fronts in colossal quantities. It is needed for modern warfare almost as badly as metals or cotton. He says that Australia has just been given an order for ties by one British railway amounting to £400,000, and before the war, ties even from the same district would not have cost a quarter of the price. Norway and Sweden are being swept clean as fast as the cutting can be done, for Russia and Germany, too. Huts have taken the place of canvas on all fronts. Water-laden trenches all have had to be lined, and when the armies move there is no time to demolish the huts or tear up what is left in the trenches. The British Government is taking the keenest interest in the question, and several experts will soon visit Canada and other Dominions to take a census of cut and uncut timber, and also impress on various bodies the need for careful economy and prompt replanting. Wood will not get back to the low value of before the war for another ten years, was the professor's prediction."

National Wholesalers at Philadelphia, March 15th and 16th

Mr. Gordon C. Edwards, Ottawa, Ont., President of the National Wholesale Lumber Dealers Association, visited New York recently and accompanied by Secretary E. F. Perry, went to Philadelphia and made arrangements regarding the annual meeting which is to be held in that city. Wednesday and Thursday, March 15th and 16th have been selected as the days of the meeting and the headquarters will be at the Bellevue-Stratford Hotel. On Tuesday evening, March 14th the Trustees will hold their annual meeting and consider many matters which will come up for discussion at the convention.

Secretary Perry states that reports so far received from members indicate that the convention this year will be very largely attended and that the selection of Philadelphia as the convention city was enthusiastically received among the membership.

Sudden Death of Canadian Commissioner of Commerce

The Late Richard Grigg, Ottawa.

We regret to report the sudden death of Mr. Richard Grigg, Canadian Commissioner of Commerce, who has been in charge of the publication of the Weekly Trade and Commerce reports of the Dominion Government, and has been successful in developing the value of these reports greatly and making them of much practical service to Canadian business men. Mr. Grigg's death occurred at Ottawa on January 6th. He was waiting his turn to purchase a ticket to Montreal at the Central Railway Station when he was seized, presumably with heart failure, and fell dead.

The late Mr. Grigg was born at Plymouth, England, in 1847. He came to Canada as a boy and spent the early part of his life on an Ontario farm. Subsequently he went to Great Britain, where he had a successful career as a manufacturer. During his life in England he was active both in the press and on the platform in developing public opinion regarding the urgent need for a better understanding of Canada's greatness by the Mother country.

Mr. Grigg retired from business in 1905 and accepted a commission from the Imperial Government to visit Canada and report upon the economic condition of the country with special regard to British trade. He made his headquarters at Montreal, and compiled a report which attracted world-wide attention and probably enjoyed a larger circulation than any other blue book ever published. Practically every important paper in Great Britain, and indeed throughout the Empire dealt with this report, both in editorials and extracts. Extensive extracts were also translated and published in leading foreign journals. It was stated in the Canadian press at that time that no single influence had had so important a share in attracting favorable attention to Canada, with a resulting good effect upon the money market and emigration, as this report.

In 1907 the British Government appointed Mr. Grigg as head of the British Commercial Intelligence Service in Canada. After he had been in the service of the Imperial Government at Montreal for four years, the Canadian Government sought Mr. Grigg's services, and he was appointed to the position of Commissioner of Commerce, with the rank of deputy minister in the Department of Sir George Foster. The Weekly Report of the Department has doubled in size and more than doubled in circulation under his charge. Mr. Grigg made a special effort to include in these reports the latest and fullest information regarding export markets for lumber. He was to a large extent responsible for the decision to appoint Mr. H. R. MacMillan as a special trade commissioner to visit all the important export markets for Canadian lumber. Mr. Grigg's great executive ability and remarkable perseverance will be greatly missed in the Department of Trade and Commerce.

Mr. Grigg is survived by his wife, one son and one daughter.

Death of J. D. McDonald, Owen Sound, Ont.

Mr. J. D. McDonald, Owen Sound, Ont., who was engaged for many years in the lumber business died recently at his home in that town. The late Mr. McDonald was for a time connected with the McDonald-Rowland Lumber Company. When he retired from this company he went into business alone under the name of "The Lad From Glengarry Lumber Company". Mr. McDonald had been in failing health for the past two or three years. He is survived by his wife, one daughter and one son.

Death of Thomas L. Shevlin

Thos. L. Shevlin, widely known throughout the United States, and also in Canada, on account of his connection with the Shevlin lumber interests, died of pneumonia at his home in Minneapolis, Minn., on December 29th, after an illness of one week. The late Mr. Shevlin was born in Muskegon, Mich., in March 1883. Upon the death of his father, Thos. H. Shevlin, he succeeded to the headship of the various Shevlin corporations and gave them his active interest. One of the Shevlin companies, with which the late Mr. Shevlin was closely connected, is that of the Shelvin Clarke Company of Fort Frances, Ont., which operates one of the largest and most up-to-date mills in Canada.

The late Mr. Shevlin was perhaps more widely known throughout the United States as a famous football player, having been a star member of the Yale Football Team for four years and captain in 1905. He graduated from Yale in 1906 and put into his business interests the same vim and energy as he had formerly devoted to football. Mr. Shevlin was president of the Northern Pine Manufacturers' Association in 1913 and was a director of the Association at the time of his death. As a result of Mr. Shevlin's death life insurance companies will pay close to two million dollars into the Shevlin Estate. Mr. Shevlin had carried insurance amounting to $500,000 and recently took out additional policies aggregating $1,000,000. Mr. Shevlin is survived by his wife and two small children.

Death of Hon. Allan Ritchie

The death of the Hon. Allan Ritchie, one of the Miramichi's best known citizens, occurred on January 2nd at the age of sixty-eight. He had been ill about six months and his death was not altogether unexpected. The deceased was born near Paisley, Scotland, the son of David Ritchie, and came to Restigouche County when four years of age. He was educated there and at Chatham, N.B. In 1865 he entered the Chatham lumber business of his half-brothers, D. and J. Ritchie, of Liverpool, and with him his brother Robert became a partner in 1868. D. Ritchie returning to Liverpool, the deceased and his brother Robert carried on the Miramichi business, having their sawing done at various mills and shipping from Chatham.

In 1871 they removed to Newcastle and bought the Rundle site, where they erected a large mill of their own. They maintained the old firm name and prospered. Robert died in 1907 and left the deceased, who later associated his sons with him, as sole proprietor. The deceased took an active interest in public questions and was appointed to the old legislative council in 1890, and voted for the dissolution of that body in 1892. He was Newcastle's first mayor in 1899 and an alderman several times after that. He had been president of the Southwest Miramichi Boom Company for thirty years. Three sons survive, Allan J., Harold H., and David.

Jack McNab, bookkeeper for Wm. Milne & Son, at their Selwood Junction plant, died recently as the result of injuries sustained during a fire at the company's office.

Prosperity Wave Headed for Pacific Coast

"Prosperity in the East is on the high gear and is undoubtedly headed for this Coast," said Mr. H. F. Alexander, president of the Pacific-Alaska Steamship Company, who returned to Vancouver from a six weeks' business trip to New York and Boston recently. "I was amazed at the change in conditions I found when I arrived in the East since I was last there in August," he said. "Everything is booming business in every line is greater than it has been for years. The factories are filled up with orders for months ahead; shipyards are so overcrowded with orders that they will not listen to any proposition for vessels for less than two years ahead; shops and stores are filled from morning until night; hotels are crowded, while the rail and steam transportation companies say that business is better at present than at any time in the history of their organizations.

"The lumber mills of the South are stocked with foreign orders that will keep them busy for two years and the lumbermen say the Mississippi Valley, the Middle West and the Atlantic coast will have to depend on the mills of the Pacific Coast for their lumber needs. While the closing of the canal has put off the business to a certain extent, they all agree that they will be compelled to come West for their lumber.

"While the war is undoubtedly responsible for heavy steamship business and trade in munitions of all kinds, the executive officers of the many railroads and concerns that I talked with also tell of an immense increase in domestic trade. I personally saw the executive of the Great Northern, Milwaukee, Northern Pacific, New York & New Haven and others, and they, without exception, said the transportation business was better now than at any time in the history of the roads. Furthermore, they all state that the wave of prosperity is rapidly extending to the Pacific Coast. This is the opinion of men who have made a study of conditions, and not mere talk of the moment."

That the lumber market in the Pacific Northwest is in healthier tone than for several years past was the consensus of opinion expressed by more than one hundred lumbermen who attended the quarterly meeting of the West Coast Lumber Manufacturers' Association at Portland, Oregon, recently. The attendance was representative of all lumber districts in Pacific Northwest territory. Mill stocks generally were reported as pretty thoroughly cleaned up and logging camps were said to be preparing to resume activities earlier than for several seasons past. Optimistic reports were received from Eastern lumber market points, where it was said there was a very definite belief that railroads had resumed heavy buying.

Important Operations at Fassett, P. Q.

Fassett lumber company's plant kept running winter and summer—logging railroad from camps to mill.

Shipping scene on Ottawa River at Fassett, P. Q.

The Fassett Lumber Company, Fassett, P. Q., operate one of the few mills in Eastern Canada that are kept running both winter and summer. In order to operate at all times of year the company have constructed an extensive logging railroad into their limits, which enables them to bring logs from the bush to the mill in very short time and to handle special orders to great advantage. The illustrations accompanying this article represent the mill as it appears to-day. This is an entirely new mill built to replace the one formerly operated by the company which was destroyed by fire in June, 1913. The new mill was running on January 1st, 1914. The equipment includes two single cutting 8 ft. bands, two heavy duty edgers, automatic trimmer and slashers, all furnished by Clark Bros., Olean, N. Y.; a 650 h.p. Corliss engine, and the other minor equipment necessary to complete a modern mill. The filing room equipment was furnished by the Covel Mfg. Company, of Benton Harbor, Mich.

The main mill is 55 x 160 feet and the sorting shed is 140 feet by 38 feet. The capacity of the plant is 100,000 feet in a ten hour day. Its output consists of spruce, hemlock, pine, birch, maple, beech, basswood, ash, oak and elm. The plant is operated upon its own refuse fuel and the surplus refuse which cannot be utilized in this manner is sold to the Standard Chemical Company who have a plant a few yards distant. One of the illustrations shows the planing mill operated by the Fassett Lumber Company. This mill adjoins the main sawmill and is equipped with one No. 65 American Wood working Machinery Company's planer and matcher, one American Woodworking Machinery Company's rip saw and trim saw, all connected up with a blower system for removing sawdust, etc. The planing mill is driven by an electric motor which is operated by a 125 h. p. engine connected to a 70 k. w. generator.

Splendid Shipping Facilities

The shipping facilities at Fassett are excellent. The company is able to make shipment very conveniently either by rail or by water, being located on the C. P. R., about fifty miles east of Ottawa and seventy miles west of Montreal, on the north side of the Ottawa river in the County of Labelle. Adjoining their mill they have piling room for 14,000,000 feet of lumber. Through their yards they have eight elevated tramways running from the sorting table at the mill. None of their finished lumber is hauled by horses. In fact, the company do not employ any horses at their mill. Each tramway is connected up with a spur to the railway which enables the company to switch cars from any part of the yard and load them direct from the pile.

There are several features connected with the operations of the Fassett Lumber Company, to which we have already referred

Plant of Fassett Lumber Company, Fassett. P. Q.

briefly, which render it quite unique among Eastern Canadian lumber producing firms. The production of logs and of finished lumber is extensively a problem of transportation and nearly every firm in Eastern Canada transports its logs to the mill by means of water, often taking a year or even two years in the process and thus eating into the profits of the mill. The logging operations at Fassett are operated entirely by rail. The limits of the company are situated some distance inland on the Salmon River in what was originally known as the old Papineau Seignory. The area of the limits is about 80,000 acres. The company have cut over, including this year's cut, 38,000 acres. They have been operating about ten years and estimate that they have sufficient timber left to keep the mill in operation for another ten years. Their logging railroad now extends for 22 miles of main line and includes also some ten miles of switches. The logging operations are handled entirely by a contractor who has this year in the woods some 350 men divided among eight camps. Every day the logging trains bring down a sufficient quantity of logs to keep the mill running. These are dumped into a hot pond, 400 x 150 feet, at the foot of the jack-ladder, which is kept hot throughout the winter by means of exhaust steam from the plant. The logs are thus thawed out and ready for the saws. During the winter the company operates almost entirely upon hardwoods and during the summer time upon soft woods.

The main line of the logging railroad runs through the northeastern portion of the limits. Branches run off this line which are

The Hot Pond—Fassett, P. Q.

View of Saw Mill, Planing Mill and Trams at Fassett, P. Q.

built annually into the sections in which the year's operations are to be carried on. Three Shea-geared Lima Ohio locomotives, one of 55 tons, one of 65 and one of 70 tons, in addition to one saddle tank switching engine of 25 tons and two Barnhardt steam loaders, 60 log cars and 26 flat cars comprise the rolling stock of the company. This is in operation daily, year in and year out, between the limits and the mill. During the winter season one engine is kept in the woods to handle the two steam loaders, while the other two engines, each handling 22 cars are kept coming and going continuously. Each of the loaders handles 65,000 feet per day.

Woods Work Handled By Contract

By letting out to a contractor the work of securing the logs, the company saves itself a great deal of intricate work and does away with the necessity for a supply store, the hiring of men and the employment of a large office staff, which is always required by logging operations. They are also enabled to know exactly how much the logs are costing them from time to time. The logging contractor has the logs cut and skidded the short distance to the switch. Here his work ends and the logs are taken in charge by the lumber company. Each section is completely cut over as the operations proceed, even the small stuff being removed and sold to the chemical company. The limits are thickly wooded with a splendid quality of timber running extensively to hardwoods.

Operating Costs Kept at a Minimum

With their railroad, hot pond and winter operations, the company claim that their costs of production are greatly reduced in comparison with other companies which operate only for part of the year and which transport their logs by water. The company gets quick delivery of its logs and is able to clear both the hardwood and the softwood at the same time. Its hardwoods are never water-stained and thus produce a high quality of product.

The officers of the Fassett Lumber Company are Hon. J. Sloat Fassett, Elmira, N. Y., president; A. E. Edgcomb, Knoxville, Pa., vice-president; Harry Thayer, Elmira, N. Y., sec.-treas., and S. J. Staniforth, Fassett, P. Q., manager.

Recently, in order to get into touch quickly and frequently with the operations in the woods the manager of the company worked out a successful scheme for converting an automobile into a means of conveyance along the logging railway track. Four flanged wheels were cast, of a special size to fit over the rubber tires of the automobile. These slip on easily when the tires are deflated. Then the tires are blown up firmly and the flanged wheels are thus held strongly in position. The car then runs along the logging railroad track and is under perfect control. It takes the grades and curves without any difficulty and can be run at a very high speed. The efficiency of this contrivance was clearly demonstrated to the Canada Lumberman upon the occasion of a recent visit when a trip was successfully made into the woods, in spite of the fact that quite a heavy fall of snow had rendered the rails slippery and difficult to travel.

This year the Fassett Lumber Company are taking out 14,000,000 feet of logs and have left over from last year' cutting 6,000,000 feet. Forty per cent. of these logs are hardwood. Last winter they cut 12,000,000 and had 8,000,000 feet left over from the previous year. On account of their special facilities for handling orders quickly the Fassett Lumber Company have felt the recent improvement in trade conditions more fully and earlier than many other manufacturing firms. They report business brisk for this season of the year, and are daily shipping the output of their mill. They are confidently expecting a continuance of good business throughout the winter and an increased demand in the spring.

Mill Type Construction Advocated

The advantages of mill type construction were outlined in a report recently by Paul Whitham, consulting engineer, presented to the Seattle Chamber of Commerce. "The 'mill' type of construction," he said, "that is, masonry walls with interior columns, beams and floors of wood, if well protected with automatic sprinkler devices and properly constructed, may be made practically as good a fire risk as a so-called absolutely fireproof building. It is also possible to erect entire structures of wood, so protecting them that they are more than a very fair fire risk. Such buildings will cost anywhere from twenty to fifty per cent. less than the so-called permanent fireproof buildings and will serve the purpose in most cases just as efficiently.

"There is an additional advantage that is particularly applicable to a newly developing country, in that the mill or timber type of buildings may be easily and cheaply removed or altered to meet new conditions or to allow for the re-arrangement or entire replacement of plants in connection with the expansion of business.

"Timber, of course, has its limitations as a construction material, and as to whether or not it should be adopted as the principal material of construction must be determined only after a careful consideration of the circumstances and purposes involved in each specific case. A thorough analysis in each instance, however, I believe will lead to the use of timber in a large number of cases, the economic advantages of which to the community will be twofold:

"First—The smaller capital investment required will enable industries to get under way that might otherwise not be able to make a go of it.

"Second—The increased use of timber will help out the lumber industry, thus reacting favorably on all lines of business in the community. In saying this, I am not overlooking the fact that the steel and cement industries also are important lines of activity, the development of which the community should foster. The prosperity of these industries, however, is very largely dependent upon the general industrial development of the community; consequently, if as a result of advertising the advantages of low cost mill factory buildings the growth of the manufacturing activities is accelerated, the cement and steel business is bound to prosper proportionately.

"The mill type of factory construction has witnessed its greatest application and development in New England, particularly in connection with the textile industries. Recently there has been a tendency to get away from the use of timber in the erection of textile buildings, largely for the reason that it has been difficult to get suitable structural timber, or, if it were obtainable, to get it at low enough prices. This should afford an opportunity to West Coast lumbermen, as soon as transportation through the Panama Canal is established on a normal basis.

"A notable instance of the use of timber in industrial building construction is in the central manufacturing district of Chicago, where a tract of approximately 300 acres of land is now largely covered with factory buildings and warehouses, eighty per cent. of which, I am informed, are of the mill type sprinkler-protected construction.

"In addition to the possibility of inducing a more rapid industrial growth by the use of low cost timber buildings wherever circumstances will permit, this very use should develop a high class of 'mill' construction, the advertising advantages of which would be of great value to the lumber interests in the more distant and foreign markets."

The Filing Room—Fassett Lumber Company, Fassett, P. Q.

In the Public Eye

A budget of comment on men and things of moment presented in the interest of our readers, independent of party politics and with malice toward no one.

General Bertram has paused to dig a few trenches around the grave of the late lamented Shell Committee and train the heavy guns of his typewriter on the critics of the dear departed. But, sad as it may seem, General Bertram's defence, which appears in an open letter to Sir Sam Hughes, is at points strongly at variance with some statements made by D. A. Thomas, who, at the instance of Lloyd George, came, saw and spoke ere he departed. And what he said misled even the Government organs into thinking that certain contractors had "striven to get large profits out of their contracts." But hear what General Bertram says:

"For various reasons while chairman I have refrained from giving out a statement of prices as compared with prices in England and the United States. But I can assure the public that in nearly every case our prices are lower in this country. I have before me a comparison of prices which will prove my statement."

* * *

But hold a minute! Perhaps we can reconcile the above with Mr. Thomas' remark that certain manufacturers were getting larger profits than they were entitled to. Perhaps General Bertram is speaking of the prices of to-day. And Mr. Thomas may have been thinking of the prices before those famous interviews in which Mr. F. P. Jones denies taking so important a part. This really looks like a reasonable conclusion, for further on in his letter General Bertram goes on to say:

"As the business developed in Canada, as experience was gained, we were enabled greatly to reduce the cost of production, so much so that on our present contracts we expect to save the Imperial Government probably $30,000,000 as between the price of the original orders and the prices now being paid to the manufacturers."

You'll remember it was reported that the aforementioned interviews, the cancellation of approved tenders that followed, and the subsequent letting of contracts on new tenders, saved the British Government $21,000,000. The denial subsequently issued declared these figures to be incorrect. Has General Bertram at last given us the true figures? Or must Mr. Jones get credit for only part of the saving and part of the credit be given to the demand for contracts caused by the new policy of letting them by open tenders?

* * *

General Bertram appears to take credit for the Shell Committee from strange sources. For instance, he proudly asserts that Canadian manufacturers undertook contracts without any financial advance, whereas in England the Munitions Department advances the money for the complete equipment of their factories. In other words, he pats himself on the back because Canadian manufacturers were possessed of enterprise of which his committee and the Government behind it were utterly lacking. It is no fault of the Shell Committee that the shell making industry has made some progress in Canada. It is the fault of both the Shell Committee and the Government that the industry is not double its present volume.

* * *

By the way, we are still waiting to hear what Premier Hearst has to say to his wayward follower J. R. Follis, M.P.P. for Peel. Will he read him a little lecture on the evils of horse trading and tell him to sit low in the back benches till the trouble blows over? Or will he come out cold and hard and tell the errant James that he who would profit by Government horse deals has no place in the ranks of the grand old party of Sir James Whitney? By the way, what would Sir James have done? The Government is being weakened by this silence on the part of Mr. Hearst.

* * *

If shells are being made in Canada cheaper and more quickly than they are in the United States and England, why is it that hundreds of millions in contracts are being spent in the United States, where only tens of millions are placed here? Perhaps General Bertram, who is responsible for the statement, will write another letter and answer this question. In the same letter he might mention why, when a Hamilton manufacturer offered to make shells at cost, his offer was not accepted.

* * *

"We were asked to bid on 5 in. shells," says a manufacturer," and bid a price the same as other firms. A few days ago we received an answer that our tender could not be accepted, no reason being given." Perhaps when General Bertram writes his next letter he will give the reason.

Mr. McAvity, manager of the Buffalo Forge Company of Berlin, who has been engaged by the Imperial Munitions Board to act in an advisory capacity looks to me like the right man in the right place. He not only has expert knowledge of the manufacture of shells, but is a man of good judgment and wide business experience. He should give valuable assistance to the Board. The latter evidently means well and if it were built on a somewhat broader gauge could do much to repair the damage done by the Shell Committee. Anyway it is deserving of a chance to show what it can do.

* * *

And now the good old Tory Ottawa Journal has crawled over the fence into the camp of those who are demanding an investigation of the Shell Committee. It may have decided to take the hurdle after being assured that Liberals as well as Conservatives have been taking a hand in the shell game, for, as partial justification for its course, it quotes the following from the Hamilton Herald:

"The Montreal Herald has been extremely vigorous in its denunciation of war profiteering and profiteers. But the Montreal Herald's esteemed local contemporary, the Mail, discloses the fact that the editor of the Herald, the Hon. George P. Graham, is a director of a company which has been clearing a profit of 100 per cent. out of the manufacture of war munitions. The joke seems to be on the Herald."

Anyway, while the Journal does not think that Brockville's favorite orator has very much interest in any company so occupied it gravely arrives at the conclusion that "the important thing is that there should be an enquiry into the question of shell profits," and it winds up with the following: "Explanations are needed—not on behalf of the Dominion Government, which had nothing to do with the matter, but on behalf of the former Shell Committee and the manufacturers."

* * *

And, while I heartily agree that explanations are in order, I cannot accept the statement that the Dominion Government had nothing to do with it. The Dominion Government gave birth to the Shell Committee. It may be its "war baby" and the Government may be heartily ashamed of it. It may have shifted its burial to the Imperial authorities, but it cannot escape responsibility for its birth. It may make some reparation if it bares its record to the public. Who knows but there may have been good as well as bad in that record? But when the Government organs start in to disown it, the public can be excused for having a few suspicions.

* * *

Over on the battlefield the vultures fly; in each war-worn country the army contractors gather. Even poor old France, whose heroism has awakened the admiration of the world is having trouble with them. The Chamber of Deputies has found it necessary to appoint a committee to enquire into contracts. One of the duties will be to investigate a "horse deal" which is said to have involved several million francs paid in commissions. And in this connection the Winnipeg Tribune recalls "a statement published a few weeks ago that a prominent politician resident at Ottawa had received a contract from the French government to supply remounts for the war. By buying horses in the northwestern states and delivering them in France he made a profit, according to his own alleged admission, of $100,000. It is asserted that his secretary said the profits were $300,000."

Is nothing held sacred by our Canadian financier? Surely poor old France had suffered enough at the hands of the Kaiser! That she should also have to pass through the hands of an Ottawa politician is piling agony on the suffering. Belgium next.

* * *

"Gott strafe England" is the cry of baffled rage that comes out of Germany. And well may the Huns ask God to punish Britain, for after more than a year of war it is more than ever evident that the Kaiser can't. Germany, by her "preparedness," has been able to brutalize Belgium, seize the richest part of France, put the steam roller over poor little Servia, and drive the Russians out of Warsaw. But to-day, with the possible exception of one or two small posts in East Africa, she does not hold one foot of British soil. The Empire on which the sun never sets is, by reason of its far-flung dominions, the most vulnerable to attack of any of the allies. But though Germany may sing her hymn of hate she cannot touch even one of Britain's scattered island possessions! On the other hand, the blundering Britisher has swept German commerce from the seas and seized her Pacific islands and most of her African colonies. And in the meantime Britain's "contemptible little army" has grown to a quite respectable gathering of gentlemen in Khaki numbering in the neighborhood of four millions. Even if our politicians and generals do make an occasional blunder it is good to be a Britisher.

* * *

> It is good business for a political party to keep systematically in touch with its rank-and-file. The best men in Canada are not all in Parliament, and those green baize doors at Ottawa are wonderfully effective against new ideas.—Montreal Star.

This from a strong Tory paper. The clouds of the coming storm continue to gather.

* * *

Every day brings fresh evidence that the viewpoint of the Canada Lum-

berman on certain vital questions that have been touched upon in previous issues under this heading coincide with the sentiments of thinking business men. It is further gratifying to note that even the Conservative papers throughout the Dominion are demanding an investigation into conditions surrounding various munitions contracts.

* * *

The Minister of Finance hints at another War Loan of $300,000,000. Bring it along, Mr. Minister. The Canadians will take care of it provided it is for the benefit of the Empire. In the words of the song—

"We didn't want to fight, but by Jingo if we do
We've got the men, we've got the guns, we've got the money too."

* * *

Major-General Bertram has taken all the alleged sins of the Shell Committee on his shoulders and gone south in search of new health. On his way he passed through Toronto, where he was able to sit up and talk about a column and a half to The Globe. Possibly he figured that giving his side of the story publicity through the Liberal organ would leave it free from partisan flavor and give the people of Canada an unprejudiced view of a great patriot who has been misunderstood and misrepresented. Anyway, he, by his own announcement, stands before you a man who rose from mechanic to manufacturer; who offered his services to his country and was made chairman of the Shell Committee. He awarded all the contracts, and was responsible for the Committee in every way. He alone awarded contracts to the amount of $345,000,000, and doing it made a saving to the British War Office of $42,000,000. And after doing all this he has been criticized! Do you wonder that he picks out a Grit newspaper and cries through its columns, "The attacks are not fair. They are breaking my heart."

* * *

Surely Sir Robert Borden will not allow that great heart to break. He has been loyal to his country, to his King, and to Sir Sam Hughes. For does he not quote Sir Sam's instructions "No politics—no graft"? And do we not know out of his own mouth that he made them his watchword and reply? And yet his hard-hearted leader sits idly by while leading Conservative papers like the Ottawa Journal, the Hamilton Spectator, and the Montreal Mail clamor for explanations. Surely the Premier should be able to see that a thorough investigation into the workings of General Bertram's committee would not only clear that gallant officer of the attacks that are breaking his heart, but would also prove once and for all that Canada is not and never has been the home of the profiteer. For to Canada's mind, as well as to the mind of the chairman of the Steel Company of Scotland, "there is something absolutely revolting in the idea of anybody actually making profits out of the nation's agony."

* * *

And though General Bertram may be staggering south with the entire weight of the Shell Committee on his shoulders, it is to Sir Robert Borden and his Government that the public look for explanations. The Government appointed the Shell Committee, and even if it acted in behalf of the Imperial authorities and took its instructions from them it represented the Canadian Government in every transaction in which it took part. It was the servant or agent of the Canadian Government and to its employer we must look for explanation of its actions.

* * *

So far Sir Robert Borden has taken no action in regard to the matter. He was heard from once in regard to the F. P. Jones incident, or chapter of incidents. His Government has appointed Sir Charles Davidson as official investigator of war contracts, but apparently his powers only extend to contracts for materials to be paid for out of the Dominion treasury. The order in council appointing the Commission reads "concerning the purchase by and on behalf of Your Royal Highness's Government." Consequently it would appear that as the shells were purchased for the Imperial authorities the shell contracts do not come within the scope of Sir Charles Davidson's labors. If this interpretation is correct the Government is all the more to blame for its silence. It was supposed that Sir Charles, with his investigations of spavined horses and poulticed drug bills, was simply clearing the decks for the heavier work. Now we are left to believe that with the "war baby" lying in its unnamed grave, General Bertram hurrying south with his failing health and breaking heart, and Wall Street boosting stocks by reports of enormous war profits, no provision has been made for clearing the matter up in any way whatsoever.

* * *

What use, then to talk about taxing war profits? Without an investigation how are we to know that there are any profits to tax? General Bertram claims that he got the shells made for $42,000,000 less than the estimates of the British War Office. Can it be possible that his one sin was too much economy, and that the impoverished contractors are really entitled to allowances from the Patriotic Fund? Was the man who had a half a million to spend on a plant with which he offered to make shells at cost really asking more than contract prices? Are all those stories that come from Wall Street simply attempts to sell a little stock to tide over a losing season spent making munitions? If any or all of this is true surely others besides General Bertram are entitled to the credit that only an investigation can bring.

But on the other hand, if the charges mentioned by the Montreal Mail have foundation it is the public and not the committee or contractors who are entitled to explanations. The Mail in criticizing General Bertram's open letter to Sir Sam Hughes says in part: "It is with real reluctance that the Daily Mail suggests the incompleteness of what is termed General Bertram's 'valedictory.' A public duty, however, cannot be evaded, and it is a public duty to remind General Bertram that his statement, utterly lacking in detail and definiteness as affecting the criticism of the work of his committee, does not allay suspicion but tends to strengthen it. Major-General Bertram has been accused of enriching his private interests from business placed by the Shell Committee under his direction. He has been accused of showing favoritism in the distribution of shell orders, and of allowing prices to the manufacturers (including his own concerns) out of all proportion to the cost. Not one of these charges did he deal with in his valedictory, except in relation to the price of shells, and in this particular matter he withholds from the public the very information it desires." These are warm words. They are all the warmer that they come from a Conservative paper edited by M. E. Nicholls, a half-brother of Hon. W. T. White, Minister of Finance. It might be added, however, that in a more recent statement General Bertram states that he has only one share in the John Bertram and Sons Company, Dundas, Ont., which was the first firm to ship to England, and that he has never drawn a dividend from it.

* * *

For Mr. Flavelle's statement that contracts were to be taken from contractors General Bertram has an explanation. In fact, the Government apparently left him, not only all the work, but all the explaining besides. When the urgent call came from the trenches for high explosive shells the British War Office naturally turned to the Shell Committee. It had been doing wonderful work and saving immense sums of money. It had business genius. Exercising that sagacity, and realizing the need of securing these shells in the shortest possible time, the Shell Committee so placed these contracts that they haven't yet been filled. Consequently they are being recalled and placed with firms that can handle them.

* * *

One of our subscribers writes us that it is not the duty of trade papers to discuss politics or matters outside of the trade. He may be right. It is true that politics and politicians put the rules of trade carefully to one side before starting to run the biggest business in the country—the country's own business. It is true that no business man would think of running his business on the lines the country's business is run on. He would never think of putting a college professor in charge of a department he knew nothing about simply because he could make a good speech. He would never engage his employees for the simple reason that they had a pull with certain ward politicians. Consequently politics may be a trade apart. But the public have to pay the mechanics who work at this particular trade. Don't you think the said public is entitled to an occasional glance at what its workmen are doing? And how is it going to get it if some paper not "in the game" doesn't break loose occasionally? If a Grit paper criticizes, a Tory paper rushes to the rescue, and the issue is soon lost in the cloud of recrimination that is raised. So sometimes a trade paper stops to wonder why a Government cannot be run along honest business lines, and how long you or I would remain in business if we treated our customers the way the Government treats the public. It is our turn to furnish the public with its "look," and if our readers will bear with us yet a little longer they will discover that they are gazing on the body politic and seeing things, not as they are painted by a Government organ or the opposition critics, but exactly as they are.

* * *

When the cry went forth that this was a war of munitions Australia promptly began to mobolize its state-owned shops for munitions work. Did Canada do likewise? No; Canada—or rather the Canadian Government—promptly side-stepped by handing over the Transcona shops to a private syndicate which is doubtless doing a nice business at a nice profit. Had the Government been big enough to seize an opportunity it could have fitted up the Transcona shops with shell-making machinery at a cost of about $100,000, hired the best mechanics in the country, and turned out at least 5,000 shells per day. Moreover, it would then have been in a position to judge from its own experience just what price should be paid for shells. It would have had at first hand information which would have ended profiteering before it started. But probably the entire cabinet were busy making speeches when the opportunity offered. High-explosive speeches had to take the place of high-explosive shells.

* * *

Britain is said to have black-listed certain United States firms suspected of being affiliated with the Empire's enemies. And from the way the Kaiser's friends in the republic across the way have acted since the war began you would naturally expect the old land to be a bit careful as to whom she deals with. Canadians should follow suit. We have no quarrel with the United States. But within her borders are large numbers of the hyphenated, who are all the more dangerous that they are allowed at large among civilized people. Canadians should be careful that no business of any kind should be placed with them, either now or after the war.

* * *

The protection of the new industries created by the war and its conse-

quent shell orders is to be made the subject of a report from the Economic and Development Commission. And that report will require the closest scrutiny when it is presented. Even in official Ottawa it is admitted that prices obtained by some manufacturers have been sufficiently high to permit of the scrapping of their plants when the war is over. Of course if these plants can be kept going as business propositions, right and good. But the public will hardly stand for their being fed on Government pap. They've heard so much about munition profits that they'll want to know when the war is over that every Government dollar gives to the man who has fought for his country or those he has left behind him. He who has stayed home and made money will receive scant consideration.

* * *

When Tommy comes marching home he is going to ask the Government if it permitted the handing around of shell contracts "to prevent commercial depression" while his comrades were dying in the trenches for lack of the shells. Will the Government have its answer ready?

SEARCHLIGHT.

Canal Reopening Still Far Off

B. C. lumbermen, and the consumers of B. C. lumber in Eastern Canada have been greatly affected by the interruption in traffic through the Panama Canal. Many reports have recently been issued regarding the probability of the canal being reopened in the near future. We regret to note that an official bulletin issued about the end of December from the office of the Panama Canal Company holds out little promise of an early resumption of traffic. The bulletin states that conditions are very unstable and it is impossible to estimate in advance what the probable available channel will be at any succeeding date. The bulletin also says:—"The governor still states that no prediction can be made of the probable date of opening and he is extremely anxious to prevent a premature resumption of the routing of ships via the canal, which would be sure to embarras the work and would result in the delay of the final opening of a stable channel. He also calls attention to the fact that such a premature resumption would be expensive to shipping interests on account of unavoidable delays to ships that might have to be held for an indefinite period."

The fourteenth annual convention of the Hardwood Manufacturers' Association of the United States is being held at Cincinnati, Ohio, on Jauary 18th and 19th.

Important Announcement of B.C. Premier

Transportation for Tidewater Mills—Development of our Open Ports

In a message delivered on the occasion of his recent accession to the Premiership of British Columbia as a result of the retirement of Sir Richard McBride, the Hon. W. J. Bowser gave the following outline of the policy to be followed by his government in relation to the above important matters, in which our lumbermen are so vitally interested. Premier Bowser said:

"Ocean transportation must be provided for the tide-water capacity of our mills, now about 700,000,000 feet per annum, so that we may secure and enjoy our proper share of the world's trade. As the matter stands to-day, we have surpassing wealth of timber, an immense investment in manufacturing plants and every facility, save one, for large development. We have no shipping and overseas markets. We must have vessels operated directly in the interests of our own industries and also to carry our natural products. Only thus can the province market its own timber wealth, and so dissipate the depression that has hung over the industry so long. Recognizing the vital importance of this matter and the paramount need of a strong commercial policy to end the shipping crisis, the government will submit decisive legislation at the forthcoming session of the Legislature. The development of our water-borne lumber trade will benefit our Coast manufacturers and should, at the same time, give the Mountain millmen larger trade opportunities in the Prairie Provinces, their natural markets.

"The Western grain crop of 1915 has accentuated the necessity of using all Canadian ports to their utmost. The questions of shipping and elevator accommodation involved are primarily the responsibility of the transportation companies and the Federal authorities, but this Government appreciates the urgency and importance of this matter and proposes to take whatever action may be open to it to secure early attention for these developments so that the 'all the year around' open ports of British Columbia may be made use of to their fullest extent to export the annual crop of the Western Prairie Provinces as well as the output of the Peace River district, which will have railway connections at an early date."

Construction and Operating Costs of Power Schooners

In view of the decision of the British Columbia Government to build power schooners to be used in the lumber carrying trade, a series of tabulations prepared by Martin C. Erismann, for the West Coast Lumberman, will be interesting to many of our western readers. These figures refer to a five masted vessel carrying 1,500,000 feet of lumber. The B. C. proposition is for four masted vessels carrying about 2,000,000 feet of lumber. The figures are as follows:

Dimensions, Equipment and Capacity

Length (custom house)	225' 0
Breadth	42' 6"
Depth	18' 0"
Gross tonnage, about	1,250
Net tonnage, about	1,125
Speed, knots, loaded (engine)	7
Lumber capacity	1,500,000
Machinery, two oil motors, 160 h.p. each	320

Cost of the Vessel

Cost of Ship complete (wood construction)	$85,000
Machinery installation	19,000
All auxiliary installations	18,000
Cost complete	$122,000
Design, contracts, supervision at 5 per cent.	6,100

Cost of Operating

Crew—Captain	$125 per month		
First mate	90	"	
Second mate	75	"	
Cook	50	"	
Cabin boy	20	"	
Eight sailors at $30	240	"	
Chief engineer	100	"	
Assistant	75	"	
	$775 + 12		$9,300
Food at 68c per man, 15 men for 1 year			3,723
			$13,023
Crew expense per day			$35.67

Engine Room Expense

1 engine: 160 h.p. × ½ lbs. oil=80 lbs. per hour=¼ bbl. at 95c per bbl.	$ .237c	
Lubricating oil at 41c	.060	
Fuel and lubricant per hour	.297	
Fuel and lubricant, 24 hours	$7.13	
Operating cost per day, 2 engines	$14.26	
Operating cost per year	5,204.80	
Engine supplies	200.00	$5,404.80
Taxes at ½ per cent.		600.00
Dereciation, 5 per cent.		6,100.00
Insurance, 7 per cent.		8,540.00
Liability, 1½ per cent.		1,830.00
Upkeep and repairs		5,000.00
Total expense per year		$40.497.80
Operating cost per day (ship and engine)		110.95
Operating cost engine per day		14.26
Operating ship only per day		$96.69

To New York with Lumber

Loading time, 100,000 ft. per day			15 days
Expense of ship loading 15 days at—			
Captain, mate, engineer, cook	$12.00		
Food	2.72		
Fixed charges per day	60.47		
	$75.19×15 days		$1,107.85
Loading, at 85c per M. B. F. of lumber			1,275.00
Canal charges, $1.20 per net ton			1,350.00
Pilotage, canal			22.00
18 days engines	$ 256.68		
36 days ship	3,480.84		—$3,737.52
Unloading N. Y., 15 days×96.69			1,450.35
Unloading, stevedores			1,275.00

Western Manufacturers and Retailers Hold Meeting

A meeting of B. C. lumber manufacturers representing the Coast and Mountain Associations and the Western Retail Lumbermen's Association was held recently at Calgary, Alta., with Mr. F. E. Sine of the Atlas Lumber Company, Calgary, in the chair. One of the interesting features of the meeting was an address by Geo. Ingram of the Security Lumber Company Ltd., Moose Jaw, Sask., who spoke of the necessity for all retailers making proper protection about and under their stoves and about chimneys. He pointed out the necessity of keeping their yards clean from hay, straw and other rubbish, so no fires would originate from within. He also said the retailers should see that those adjoining their property did likewise. This would keep fire losses in lumber yards at a minimum, and it would enable retail lumbermen to have lower insurance rates. Arrangements were being made for the registering of the Retail Lumbermen's Mutual Fire Insurance Company in Alberta. This company had been carrying insurance on many retail yards in Manitoba and Saskatchewan at only 48 per cent. of the Board rate, which was the rate that is being paid by most dealers, and this in itself was a great saving, reimbursing the dealer many times over for his expense in belonging to the Retail Lumbermen's Mutual Fire Insurance Company, and what could be done in Saskatchewan and Manitoba could and would undoubtedly be done in Alberta. In reply to the question as to how this would affect the lumber yard with the local insurance agent, Mr. Ingram showed clearly how the lumber yard could pay the local agent, as a bonus if he deemed necessary, the amount of money the local fire insurance agent would get by writing his policy and then save a third or more of his premium.

Retailers Must Give Service

Mr. N. G. Neill, secretary of the Western Retail Lumbermen's Association, displayed several pictures, drawings and blue prints of farm buildings which drew forth great admiration. Many enquiries were made as to obtaining poster pictures in retail yards. The building department of the Western Retail Lumbermen's Association offers to the retail dealer plans of all kinds of farm buildings, and, if he desires the blue prints, he can obtain a complete set for any building at a cost of only $1.50. This makes it possible for a retail dealer to give to his trade the very best of service. Mr. Neill explained the special Plan Department, whereby it is possible for a customer, through the retail yard, to send to the Association a rough drawing of a proposed building which the Association architects will work into a proper design and for which blue prints can be had for exactly what it costs the Association. This enables the retail dealer to give to his customer further and better service and at the very lowest price at which it can be obtained. Most retail dealers now fully realize that they must give service to the public and be merchants, and when they are, and that service is given, they have a satisfied public, and are able to compete against any competition.

President Galvin Wants Better Business Methods

Mr. W. D. Galvin, president of the Western Retail Lumbermen's Association, spoke before the meeting, urging the necessity of the retail lumbermen joining together in an association that would be progressive and constructive. He asked all the Alberta retail lumbermen to consider the idea of becoming members of the Western Retail Lumbermen's Association. He showed them that organization and co-operation on the part of all dealers is the means of promoting better methods of doing business and thereby rendering better public service. The community rightly demands adequate public service from any class of dealers, and more particularly from those who handle a commodity of universal necessity. If the public does not receive service, agitation will soon result in establishing a new medium of service, and those who have failed will no longer be allowed to serve.

The methods of the retail dealer must be constructive and progressive to hold his position, and he who denies that the change is in process will be swept off his bearings so completely as to be unable to get a footing in the new order of things should he endeavor to hang to the fogeyism of the past. The old order of things in retailing lumber must be thrown off and modern methods used, and the shackles of worn out methods must be thrown off by the retail lumbermen themselves or the business will pass into the hands of the new school of merchandising.

More Publicity is Required

While the promoters of wood substitutes were waging a consistent campaign through attractive advertising, the manufacturers and retailers of lumber had, up to the present time, done but little to counteract these energetic efforts to exploit wood by any effort to acquaint the public with the superiority of wood. Through the co-operation in the matter of publicity of lumber associations, provincial governments and the Dominion Forestry Departments, a far-reaching effect in its results both to the retailer and the wholesaler of lumber would materialize.

This educational campaign cannot be long delayed, and when a greater market is created for the manufacturers it means a great market for the retailers. The same reacts when the market is lost to the manufacturer; it is also lost to the retailer.

The British Columbia manufacturers also held a meeting at the Palliser Hotel, and an address delivered by Mr. R. Benedict, of the Forest Branch of the B. C. Government, was listened to with much interest by all. Mr. Benedict explained the work they were doing to show the various B. C. "Timbers" to use for different purposes and parts of farm buildings. He also explained their recently published ten bulletins on "Farm Buildings," and their four bulletins on "British Columbia Timbers," of which bulletin No. 12, entitled "How to Finish B. C. Woods," is of special interest to home builders, owners, carpenters, architects and building contractors.

B. C. Lumber Unequalled

At a joint meeting of the manufacturers and retailers, the representatives of the Mountain and the Coast Lumber Manufacturers' Associations explained to the retailers that they were in the best position to serve their needs and wants. They impressed upon the retailers the fact that the B. C. mills manufactured lumber which could not be equalled or excelled in quality or workmanship by mills in any other part of the world. It was unanimously agreed by the retail dealers present at the meeting that they encourage the use of Canadian manufactured lumber whenever it was possible or when it was within their bounds to do so.

Western Trade Improving

The Christmas holidays and the usual festivities attending the new year made business rather quiet in the lumber trade in the Prairie Provinces. The retail dealers are looking chiefly after their collections. All the farmers now have money and are paying their debts freely. It is expected that January will see a further revival in the lumber trade in the Prairie Provinces. A well-known B. C. lumberman discussing the lumber situation last week said there is now a vast variation in the price of logs according to how the seller is able to meet the buyers' demands. He expects the sensation in the near future in the lumber business will be furnished by hemlock, with which all the northern coast is carpeted and which, when cut into lumber, makes a product which takes a polish like fir and is nearly as durable, while the grain will compare favorably with curly maple. Hemlock is a heavy wood and not amenable to rafting except under special methods of handling, but in the years to come is expected to be the greatest source of income from the forests of Western Canada.

The following Western lumbermen are about to leave for the front: Capt. George R. Hanbury, as Adjutant of the 90th Battalion; Capt. W. R. Herchmer, transport officer of the 79th Battalion; and Lieut. G. R. MacPherson, of the Keewatin Lumber Company. Lieut. MacPherson is at the Port Osborne Barracks, Winnipeg, training with the officers' corps.

Other lumbermen of the West who have joined the overseas expeditionary force are Mr. Jas. F. Pike, late of the Finger Lumber Company, Le Pas, Man. He has joined the 90th Battalion, which is known throughout Canada as "The Little Black Devils." Mr. D. W. McDonald, of the Farmers' Lumber Company, Saskatoon, is at Winnipeg training for the front, as is Mr. J. F. Doak, of the Doak Sash & Door Company, Saskatoon, and Mr. R. M. Thompson, architect.

Thirty thousand feet of clear spruce was recently brought down from Masset, Queen Charlotte Islands, B. C., for shipment to England, where it will be used in the construction of aeroplanes. This wood is specially suited for the purpose, being light but staunch.

A Record for Winnipeg

The huge crop of Western Canada has made itself felt in the bank clearings at Winnipeg, for the clearings for the month of November are a record in the history of the city; while in the whole of the Dominion, Winnipeg stands only second to Montreal in the amount of bank clearings for last month. Winnipeg's clearings were $245,962,656, while those of Montreal were $282,487,024, the clearings of Montreal being $81,083,995 over the same month last year, and of $38,092,250 over November, 1913.

The bank clearances of Winnipeg for November were:

Year	Clearings
1913	209,574,750
1914	148,927,216
1915	$245,962,656

Timber Cruising Methods—Both Old and New

By Judson F. Clark, Forest Engineer*

As a precaution—in the event that one of the laity may read this—I shall at once define a "Timber Cruiser" as one who examines and reports on timberlands, giving the quantities, qualities, and values of the timbers thereon.

No doubt the earliest logger was somewhat of a timber cruiser, but be would not have known himself by that name. It was at a much later day, when the timber "looker" went out on long trips with a map for a chart and a compass as the most indispensable part of his equipment for roaming the trackless forest, that someone likened him to a mariner who similarly finds his way on the pathless sea, that the term "cruiser" was applied to him. It was an apt comparison, and the term has long since found general acceptance.

The evolution of the modern timber cruiser and of his profession is the necessary result of the changing point of view of the timberland owner. In the early days of the lumber industry, standing timber or stumpage was purchased solely for the purpose of converting it quickly into logs. Then the finest of timber trees encumbered the best of agricultural lands, therefore the logger could be interested only in high grade timber—mostly white pine and white oak—growing on level or gently rolling land. At this stage a cruiser who would include in his report the amount of hemlock, or balsam, or cedar, or gum, on a tract, or who would include even the white pine or oak that grew on a hillside where it would be inconvenient to log it by bull-team, would be very properly thought incompetent, and perhaps crazy, by his scandalized employer. The only permissible "cruise" at that stage was an estimate of the timber that could be profitably logged at the time the cruise was made.

But times change, and nowhere have they changed more extraordinarily than in the lumber buisness. The early logger of white pine logged out his limits and moved to new ground without a thought that any value had been left behind. He had found it hard work to make a living margin cutting only the best, and how under these circumstances could the inferior trees have any possible logging value? What, then, was his astonishment to find that ten or fifteen years later he could return to his logged-off pine lands and make a larger cut of sawlogs and a deal more money by logging over the same ground for cull pines, spruce, hemlock and cedar? This time he left nothing but trees too small for lumber and the worthless hardwoods. Another decade, and he finds that he can make a small fortune of easy money from this same twice-logged-over area by simply selling out to the pulp and paper man, or the stave manufacturer, or the wood alcohol distiller.

This story has been repeated with local variations within the business lifetime of a single generation of lumbermen in every important lumber district east of the Rocky Mountains, and what was more natural than that the lumberman should look to the virgin forests on the lumbering frontiers as an exceedingly promising field for the investment of the wealth that had thus been so unexpectedly forced upon him? Thus was born a new and vast factor in finance—the field of timber investment.

The march of progress in the utilization of the less favored kinds of timber has gone steadily onward, and with it the improvement of methods of log transportation, until it is generally admitted that sawlog timber, wherever found in considerable volume, has an actual or potential investment value.

The contrasts that fifty years have seen as regards log values may best be appreciated by comparing the average white pine log cut in Ontario or Quebec in the sixties with the present cutting in those regions of the formerly despised black spruce and balsam, down to three or even two inches in the top and four inches on the stump. And as regards log transit, by comparing the tedious transportation by ox-team on the best of logging ground, to the rapid flight of logs by aerial tramway from the Mount Kenia plateau in East Africa to the saw-mill plant located many miles distant and more than six thousand feet below.

Great as has been the progress in utilizing what was once waste wood, and in lessening the cost of getting the logs to the mill by devising new machinery and better methods, there is every reason to believe that progress is be to continued in both lines. Thus in the standard commercial cruise of today the modern timber cruiser is called upon to make a complete inventory of all the timber on a tract, with careful mapping of the location of the different kinds and qualities on the ground, together with full details of the topography of the area and of the outlet to rail or water transportation.

* Address delivered before the B.C. Forest Club, Victoria.

Just here it may be worth while to consider the validity of the word "merchantable" as applied to standing timber. It has already been given a good deal of attention by our "learned friends," the lawyers, and we are not inclined to have them make a profit from its eccentricities. Among timber investors and lumbermen generally it is understood to mean not only such timber as might be logged under existing conditions at a reasonable profit, but also to include such as might reasonably be expected to be so logged within a reasonable time! What a delightful opportunity for legal confusion!

On the other hand, many loggers who buy their stumpage from hand to mouth, so to speak, limit the term "merchantable" to what they find they can profitably log under current conditions as regards cost of logging and log prices. Notwithstanding the much wider use of the word in its broader meaning, it does seem that it is best suited to describe the loggers' case, and should be limited to that use.

If, then, we regard the merchantable timber as that portion of a stand that may be profitably logged at any given time, it follows that the merchantable cruise on any tract varies with the fluctuations of all factors affecting the profit of logging. If the price of logs falls the amount of timber on any area that may be profitably logged is decreased. If the cost of labor, foods, or machinery increases, the merchantable cruise is still further diminished, and may and will disappear entirely if the changes are such as to make the logging of the tract for the time unprofitable. Conversely, any increase in log values, or any lessening of the cost of logging, automatically increases the merchantable cruise. Where all the timber may be profitably logged the "merchantable" cruise becomes identical in amount with a commercial timber cruise which gives the total volume of sound timber, less a proper allowance for unavoidable breakage in falling.

A concrete case will further illustrate the point. A certain tract within towing range of Vancouver, which on account of the topography could not have been logged at all with the equipment used twenty years ago, was partly logged in 1906 and 1907 by donkey engines. The logs were sold in 1907 at $12.00 per M, camp run, at the loggers' boom. Stumpage was reckoned worth $1.00 per M.; the royalty was 50c per M. One dollar net was considered a fair logging profit for the logs that were hardest to get, hence the logger could afford to spend $9.50 ($12.00 less the $2.50 as above) in getting his most difficult logs. In other words, any timber that could be logged to tidewater for $9.50 or less was "merchantable." Practically every log on the tract could have been put in the water at that figure, and the limit which twenty years ago would have shown no timber on a "merchantable" cruise basis came to have an average of about 40 M per acre of "merchantable timber" in 1907, which was also the total amount of sound timber as shown by an ordinary commercial cruise. Had this limit been logged in 1915 instead of 1907, the average price at the boom for the camp run (as cut in 1907) could not have exceeded $5.50 per M. Allowing $1.00 for stumpage, 75c for royalty, and $1.00 for logging profit, the logger could not have put in any logs costing more than $2.75 per M. to log. In the case of the limit in question this would mean that he could not have opened it up at all, hence the "merchantable" cruise would have again returned to zero.

These considerations, together with the further fact that different loggers vary greatly in personal efficiency, and therefore what is "merchantable" to one may be profoundly unmerchantable to another, have long ago established the total volume of sound timber as the only admissible basis for commercial cruising, leaving the merchantable volume to be determined from time to time according to the varying local conditions of log costs and log prices. These supplementary merchantable estimates are invariably reported on separately—usually by letter—as are also current stumpage values, which are likewise influenced by the fluctuating factors of current log costs and values, as well as by the demand and supply of stumpage for investment and for operation.

In a new country such as the British Columbia Coast, where many limits are purchased for immediate logging, the determination of the merchantable stand becomes a very important part of timber cruising. In governmental reports on timber offered for sale for immediate operation (as in the case of government timber sales), it is of course the only cruise desired by either buyer or seller. In private work, such cruises, though frequently made for private owners, are seldom given publicity. This is no doubt partly due to the fact that they are good only for the conditions obtaining at the time of report, but the

chief reason is doubtless that cruises are usually made public only when owners are desirous of selling their properties, and they very properly desire to have the entire stand on the tract offered for sale and considered on its merits quite without regard to whether or not all of the timber could be logged at a profit at that particular time.

In the case of virgin forests the total volume cruise may be accepted as accurate for many years. That is to say, that in a mature virgin forest the rule obtains that the annual growth is approximately offset by the annual decay in the over-mature trees, and, barring loss by fire or windfall, a cruise made a decade hence would show little variation in wood volume or quality.

Incoming of the Forest Engineer

So much for the basis of modern timber cruising. The evolution in method is equally interesting.

The old-time cruiser was usually a man who had had experience in logging in the same district as that in which he undertook to cruise, and who, on examining a tract, could make a comparison between it and other tracts which he had seen before they were logged. And, having in mind the amount which had been cut from the logged areas, he could approximate the amount which would be cut from the area cruised if logged in a similar way. Many capable men thus trained gave a very good account of themselves as long as the standard of logging did not greatly change, and so long as they continued to cruise in the district with which they were familiar.

With changing logging standards in the old districts, and with the exploration of new districts where logging was still in its infancy, or where it was conducted with different equipment, and above all, with the demand for a detailed mapping as well as cruising of the timberlands, a new type of timber cruiser appeared.

The Forest Engineer, as the modern timber cruiser is called, is essentially a man of engineering training, and it has been his task to adapt standard mapping methods to meet the needs of the logging engineer, and to apply scientific methods to timber cruising, or, in other words, to standardize the measuring and valuing of forest stands. The methods of accurately mapping lands have of course long ago been standardized. It was part of the work of the forest engineer to adapt these methods so as to give a satisfactory topographic map without exceeding the cost that a lumberman could well afford to pay. Thanks to the aneroid barometer used in conjunction with more precise instruments, this has been accomplished.

The standardization of timber cruising methods called for two radical departures, namely—the development of volume tables, and the "gridironing" of the tract cruised by systematically covering it with a series of parallel cruise lines.

To take the latter first, the cruiser first establishes base lines which are carefully chained and levelled, and on which he marks the five or ten-chain points. The boundaries on two opposite sides of a limit will conveniently serve as base lines, provided they are not more than a mile apart. Should the logging of the limit call for a railroad, the approximate location of the main line should be traversed and levelled, and this will serve as an additional base line on which to "tie" the cruise lines. The cruise lines are then run from one base line to another at whatever intervals may have been decided on, having in view the regularity or irregularity of the stand. In large tracts the cruise lines are usually spaced ten chains apart, but where the timber is patchy a closer spacing is necessary. As he runs his cruise line the cruiser tallies all timber (classified by species, height classes, diameters and quality) on a strip 66 feet wide (33 feet on either side); makes note of the character of the surface and other topographic features (such as stream crossings, rock outcrops, etc.); and makes a complete record of elevations as shown by his aneroid. The cruiser also sketches all topographic features and type boundaries as far as he can see on either side of his line. This gives practically complete data on the area between the lines. On reaching the base line at the other side of the tract he "ties" his line to the nearest 5 or 10-chain point, checks has aneroid readings with the base line levels, and proceeds to run the next parallel cruise line at the desired spacing.

Elimination of "Guess" Estimates

In this way the entire area is "gridironed." If the spacing of the cruise lines is 10 chains apart, the parallel cruise lines (on which a complete tally of the timber and other data is taken) will occupy 10 per cent. of the tract. If the spacing of the cruise lines is five chains, complete data will have been taken on 20 per cent. of the tract. For any considerable area, a 20 per cent. cruise is sufficiently accurate even for high priced stumpage. In the East and South 100 per cent. cruises have been made for white pine and cypress, but it is at least doubtful if the resulting refinement in accuracy justifies the additional cost to owners. A 20 per cent. cruise costs about 50 per cent. more than a 10 per cent. cruise, and on small areas and where stands are very patchy the closer spacing is necessary. A 100 per cent. cruise costs about six times as much as a 10 per cent. cruise, or approximately $1.80 per acre, as compared with 30c per acre for Coast conditions in British Columbia.

Having determined the kinds, numbers and sizes of the trees on a tract, the next step is to translate these figures into feet board measure, log scale. This is done by means of "volume tables."

A volume table for any kind of timber, Douglas Fir, for example, is a table that gives the average scale for all Douglas Fir trees according to diameter and merchantable length. Thus in a volume table before me, prepared by the United States Forest Service, I note that a fir 36 inches in diameter, and having a log length of 170 feet, contains on an average 2,020 feet board measure if scaled according to Scribner's log rule. Our firm has during the last nine years collected a large amount of volume data for all Coast timbers. This data is gotten by scaling logs after the fallers on a large number of logging operations, using the British Columbia log rule.

In comparing our tables with those developed in a similar way by the U. S. Forest Service for the same species in Washington and Oregon we find, as might be expected, that ours average somewhat lower but in other respects resemble them closely. The lower scale is probably due to a somewhat higher stump in British Columbia, to the slightly lower scale given by the B. C. Rule as compared with Scribners, and to the well-known fact that the north temperate zone trees reach a better individual development towards the southern limit of their range. The members of the B. C. Forest Club will be interested to know that our tables check satisfactorily with those published by the B. C. Forest Branch. Our red cedar and hemlock tables are, however, appreciably lower.

In using volume tables it must always be recalled that its figures are average figures, and that there should always be secured local measurements of trees on each tract so as to determine whether the timber on the particular area cruised will scale better or poorer than the average shown by the table, and how much better or poorer.

The standardization of timber cruising enables different cruisers using standard methods to get closely uniform results for the same tract. The maximum variation for a 10-chain spacing of the cruise lines should not exceed 10 per cent. and should average less than 5 per cent.

Examples of great and even extreme variation in the amount of timber exported on the same tract by different cruisers whose methods were not standardized are so frequent as to be quite commonplace. Perhaps as extreme as any were two cruises on a group of 23 limits within fifty miles of Vancouver. The cruise on which the tract was purchased was 365 million. The cruise on which the limits were abandoned after the payment of $125,000 on purchase account was $16,000,000. Another case that comes to mind was a happier one for the purchaser. A single limit this, cruised some ten years ago at six and a half million. The owner logged five million from it and sold the "logged" limit on a basis of the remaining one and a half million. A later cruise showed less than 100 acres had been cut over and a stand of over fifteen million remaining.

The burden of checking different cruises which fail to harmonize has naturally fallen in increasing measure to the forest engineer. And in this connection it will be most illuminating to refer to our own experience in a couple of typical cases.

Some British Columbia Examples

In the summer of 1912, a large corporation desired to purchase a large tract on Harrison Lake. The owner submitted a very attractive cruise, made for him by an eastern firm. The prospective purchaser had the tract reported on by their own cruisers. Their report was favorable for the purchase of the tract at the price per M asked, but found a substantial shortage in the amount of timber on the ground. On the owner's refusal to make the required concession, he having every confidence in the accuracy of his cruise, the prospective purchaser asked our firm to check the cruise made by their own men on certain selected lots. This we did, with the result that their cruise was found to correspond very closely with ours on the lots examined. The owner, still unwilling to accept the lower cruise, asked for a joint cruise by his cruisers and our firm of three designated 40-acre blocks.

On going on the ground with two representatives of the other cruising firm and representatives of both prospective buyer and seller, the writer took along copies of the volume tables used by our cruisers in computing the cruise on this particular portion of the tract. In making the joint cruise both parties agreed closely as to the number of logs per tree, percentage of breakage, and all other important points, except the vital one as to how many feet board measure there was in any tree of given dimensions. We finally agreed to fall and scale 30 trees as a test of our different views. In order to make this falling-and-scaling test a direct check on our cruise, I handed the representative of the owner the copies of the volume tables that had been used by our cruisers, with the request that as each tree was measured he call out the corresponding scale from the volume tables, thus eliminating my personal judgment from the test. At the conclusion of the scaling of the fourteenth tree the other cruisers refused to scale any more. The showing at that point was that their average estimate was slightly over 30 per cent. too high, while the figures from

our volume tables averaged within 3 per cent. of the actual scale of the logs as measured on the ground.

The other case to which I shall refer had its origin in a case of "nerves" on the part of the owner—an eastern syndicate. They had had a large timber tract carefully cruised at the time of purchase by an old-timer in cruising who bore a good reputation, and who had had considerable experience on the B. C. Coast. Later, however, they became anxious to have the cruise checked, and placed the matter in the hands of their business representative at Vancouver with instructions to use the most competent cruiser available. The checking cruiser reported a shortage of some 700 million feet, or about half the original cruise, and further complicated the case by the most extraordinary variations in the case of individual forties, where he in some cases found four or five times as much timber as Cruiser No. 1, notwithstanding the fact that his cruise as a whole was so much lower.

The distressed owners came to us explaining that they did not want another cruise, but did want to know if there was not some way of determining by precise measurement the exact amount of timber on a forty. We advised them that a measurement which would silence all doubters would be to survey out the boundaries of the forty, measure the breast-high diameter of each individual tree thereon, plainly marking each tree as measured to avoid error, and finally to get the scale of 10 per cent. of the trees by accurately scaling the logs therein contained with a special tree-scaling instrument. They responded by indicating 25 forties which they wanted thus scaled. The scaling of the 25 forties showed that the higher man was safely below the actual amount of timber on the ground, and that his cruising was as consistent as could reasonably be expected. The comparison with the second man's work showed that he had been lost when he was supposed to have been doing his work, if the results turned in were actually from data taken on the ground.

The standardizing of timber cruising resembles standardizing in other lines in that it consists of eliminating in so far as is practicable the element of personal judgment. Perhaps in no other calling concerned with the determination of quantities and values has the element of personal judgment played so large a part in the past. Nor is it possible to wholly eliminate it. It has, however, been very largely replaced by real measurement, and to that extent timber cruising has been reduced to a scientific basis, and the forest engineer is entitled to his name and place in the ranks of the engineering profession.

Well-Known Lumberman Now Optimistic

President John Hanbury, of J. Hanbury & Co., Ltd., Vancouver, B. C., returned recently with Mrs. Hanbury from a trip to Eastern points. Considerable time was spent with Ottawa friends, and on the return journey a number of prairie centres were visited. Mr. Hanbury left the Coast holding rather uncertain views as to the future of the lumber industry—he returned a pronounced optimist, the change being the result of actual contact with conditions and effects which cannot fail to produce an abundant prosperity throughout the entire Dominion.

The West, in Mr. Hanbury's opinion, is assured of good times as a consequence of the phenomenal grain crop in the prairie provinces—day after day new records are being established owing to the acreage yield in many districts having been considerably underestimated. There is no "spotted" territory, as in other years, and practically every farmer in the three provinces will have plenty of money for all purposes. What this means to the lumber industry can scarcely be grasped, states Mr. Hanbury, it being well known that for the past two or three years the average farmer has been unable to do business with the lumber retailer. In the meantime he has learned a lot about the money-making possibilities of mixed farming and has been hoping for a big crop which would put him in the way of erecting the necessary buildings. Everywhere there will be a demand for lumber for one purpose or another, and it looks as if there will be business for most of the mills in the province if an outlet can be secured for the usual cut of the export plants. This seems probable in view of the more cheering report from the Panama Canal and the fact that steps are being taken to secure governmental assistance in solving the transportation problem by building a fleet of lumber carriers.

Prosperity is assured the eastern portion of the Dominion, states Mr. Hanbury, as a result of the tremendous activity in manufacturing lines, the good crops, and the enormous war orders about to be placed in addition to those now in hand. Good times in Ontario will mean a better demand for B. C. lumber, a fact which should not be lost sight of by our millmen.

U.S. National Forest Timber Sales

Bids have been accepted by the United States Department of Agriculture for two large bodies of National Forest timber estimated to contain 188,100,000 board feet. One is in California and the other in Utah. With one exception, these are by far the most important sales made this fiscal year, which is expected by forestry officials to run considerably above last year in receipts from timber sales, the first five months having shown an increase of nearly 40 per cent.

The California sale is on the Plumas National Forest in the Sierra Mountains. The most valuable timber is sugar pine, for which $3.25 per thousand was bid, with an estimated total of nearly 26,000,000 board feet on the tract. For yellow pine, of which the amount is put at over 37,000,000 feet, $2.60 was bid.

Douglas fir, white fir, and incense cedar, which have a much lower market value, brought an average of only about 70 cents a thousand for a total of over 43,000,000 feet. The purchaser will be allowed an operating period of fifteen years, besides a year at the beginning for the construction of necessary improvements; but the prices to be paid are subject to readjustment every five years.

The Utah timber is in the Wasatch National Forest, and will be cut chiefly for railroad ties. It comprises, according to the government's estimate, 82,100,000 board feet of green and dead lodgepole pine, Engelman spruce, and alpine fir. The sale price is 10 cents for each tie cut and ½ cent per linear foot for mine timbers.

Notwithstanding that since the current fiscal year began, July 1, there have been two large previous sales of National Forest timber, one in Arizona of less than 50,000,000 feet, the other in Washington of nearly 100,000,000 feet, the vast bulk of the sales from the National Forest are of small quantities for the supply of local needs. The total cut from all the National Forests last year was 689,000,000 board feet, of which nearly one-fourth went to local residents allowed free use, while out of a total of nearly 11,000 individual sales only 109 involved timber worth more than $1,000. With timber receipts during the last fiscal year in excess of $1,175,000, the forestry officials say that if the rate of gain already made this year continues the receipts will exceed all past records.

Cargo Orders for St. John Spruce Stocks

A St. John, N. B., despatch says that several Government orders have been received there for steamer cargoes of spruce lumber for war purposes in Great Britain and France. No doubt more will be received. This is good business and is the more welcome because the stocks of lumber carried over are about 25 per cent. larger than those of last winter. The cut of logs during 1915 was larger than that of the previous year and prices were higher. The operators had a profitable year, but the big shippers had some difficulty because of the high freights, and this Government business helps them out. The British lumber market has advanced a little of late, with more active demand than a year ago, but tonnage is still scarce and the freight outlook so uncertain that the big houses are not booking orders ahead as usual at this season but are awaiting market and freight developments. The winter thus far has been the mildest for many years. Swamps were not yet frozen hard at the end of December, and there had been no sleighing in the southern part of New Brunswick or in Nova Scotia. In both provinces, therefore, operations in the woods have been delayed.

Law Suit Over Forest Fire Losses

The Attorney-General, the Parry Sound Lumber Co. and the Bank of Montreal are plaintiffs in an action against Angus Sinclair, the Canadian Northern Ontario Railway Co., and Mackenzie, Mann & Co., to recover $68,720 for damages said to have been caused to timber in the township of Street, by trespass and fire. The bill is itemized for some 77,000 trees, which it is alleged have been destroyed. Of these some 2,200 were cut in trespass, it is said, for poles and bridge timber. A fire caused by railway construction started a fire which destroyed 11,047 pine trees and 24,453 other trees on May 24th, 1914. A steam-shovel in a gravel pit started a fire in July, 1914, in which 12,205 pine trees and 27,015 other trees were destroyed. The plaintiffs ask $16,000 for the increased cost of operating the limit and for damage to the rest of the township.

It is estimated that 2,000,000 to 3,000,000 sleepers will be required by the British railways in 1916, and, owing to the European war, which has cut off supplies from the countries bordering the Baltic Sea, the requirements for next year will be met largely by Canada and the United States. English railways are accustomed to use sleepers 5 in. by 10 in. by 8 ft. 11 in. in size. The sleepers imported into Great Britain from all sources during 1914 were valued at $3,192,400. "Sleepers" is the English term for cross-tie.

The College of Forestry at Syracuse offers a correspondence course in lumber and its uses to any person in the State of New York. This phase of its general educational work has been developed as a result of an increasing number of inquiries from every section of New York regarding the technical qualities of various American woods.

Box-Making in British Columbia

The rapid expansion noted in all lines of business in British Columbia prior to the declaration of war had an especially stimulating effect upon the box-making industry; and it is worth noting that while the depression due to the dislocation of the world's commerce has been felt most severely by the lumbermen of the province as a whole, the box manufacturers have been enjoying a good run of orders at fairly remunerative prices. This is to be ascribed in the main to the rapid development of the fruit and vegetable industry, together with the deep sea fisheries, which call for enormous quantities of containers for shipping purposes. In addition to the largely increased home demand for boxes a considerable foreign trade has developed, with the result that several sawmills having box factories in connection are now filling huge orders for the United Kingdom, Australia, New Zealand, and elsewhere, the material being shipped in shook form, to be assembled as required.

One of the best of the Vancouver factories is that of the Pacific Box Company, Limited. The business was established in a small way on Prior Street in 1906, but in 1913 the present company erected works on False Creek, at the foot of Smythe Street. Here—in the very heart of the city—they occupy a site of three acres with valuable water frontage. The modern factory erected at the land end is 109 x 108 feet in dimensions, of two storeys. Between the building and deep water there is piling ground for a large stock of lumber. At the present time over two and a half million feet are being carried in order that it may be thoroughly seasoned before use. The lumber is transferred on trucks from the pile to the machines on the mill floor. The equipment includes a fast-feed Woods planer (capacity 250 ft. a minute), a large Berlin planer, pony planer, horizontal and vertical resaws, and the latest design of dovetailing machine (three machines in one) which has a capacity of four thousand finished boxes every ten hours. In all, the plant has twenty-one different machines, two fans and one blower, to operate which there are twenty-four electric motors ranging in horsepower from 5 to 80. Some of these are direct connected to the machines. The equipment represents the latest and most improved machinery for making boxes, either in shooks, nailed or dovetailed. At the south end, on the first floor, is a filing room having Covel and other machines for saw and knife sharpening and repairs.

The capacity of the sawing floor is 40,000 feet of spruce, hemlock and pine lumber a day. When sawn the shooks are transferred by hoist to the second floor for assembling, nailing and printing. There are two printing machines, one having double cylinders for two-color work.

Mr. R. W. Sharpe, under whose efficient management the company has made steady progress, says that the plant can supply boxes for any purpose and in any quantity. The business is largely with manufacturing concerns, fish packers and fruit growers, but numerous orders for special sizes are received and filled from time to time. So far, the firm has not accepted any foreign orders, the demands of the B. C. and prairie trade having taxed the capacity of the plant.

Pacific Box Company's plant at Vancouver, B.C.

The Waterous Engine Works Company, Ltd., Brantford, Ont., are favoring their friends this year with a fine large office calendar with reproductions of views of their plant and a generous sized calendar pad with figures that can easily be seen across a large office.

The Modern Retail Yard

At a recent convention of retail lumber dealers at Little Rock, Ark., Mr. C. K. Nicoll, of the Arkmo Lumber Company, read an interesting paper, entitled, "Practical Suggestions for Arrangements, Equipments, Accommodations and Conveniences in a Retail Lumber Yard."

Mr. Nicoll gave the retailers present at this meeting many practical suggestions regarding the ideal arrangement of a lumber yard.

First of all, he insisted upon sheds for the lumber—sheds with studding set at regular intervals so as to be uniform. By this arrangement the lumber dealer had a permanent advertisement for his stock, for nothing catches the eye of the public more than "LOOKS." Looks are the first requisite in selling.

Next he favored bins 7 feet high and 4 feet and ½ inch wide, with a shelf where required. This height permitted a man to reach the lumber easily, and the width permitted the stacking of lath in them.

Mr. Nicoll advocated plenty of light in all sheds, and made the suggestion that a cupola with 10 x 12 twelve-light windows with weights every four feet would meet the situation nicely. This would provide the necessary circulation of air and light at the same time.

Alleys at least 20 and preferably 24 feet in width were recommended by the speaker. Such alleys permitted the stacking of lumber in the alley if necessary and the pulling out of 20-foot timbers without inconvenience. The stacking of all lumber the full width of the bins with a lath placed between every tenth layer of the boards kept the piles straight, permitting checking of stock-taking in haste, and in addition prevented slovenly yardmen from pulling from the side of the pile. He also recommended the stacking with tongue out in all lumber having such, for injury to tongue did not depreciate the value of the commodity, while a break in the groove caused a loss. Mr. Nicoll also advocated the cutting of all bundles and declared that in this manner the stacking could be done for 35 cents a thousand feet, and there was, moreover, a saving in time over the handling in bundles that would not permit straight nor rapid stacking.

In the handling of moulding he advised the retailers to erect a shed near the office with bins for 2,500 feet each, the reserve stock to be kept in bundles overhead. He declared that the bins should be numbered so that an ignorant laborer could be sent to pick out the stock and make no mistake if necessity demanded it. Lumbermen should also use colored crayon to mark the ends of their moulding, using a different color to designate length, and in this way no time would be lost in pulling out the length of moulding required.

In conclusion Mr. Nicoll advocated the placing of doors flat with the ones least used in top racks. He said he always numbered his doors from the bottom. In this way he knew at a glance the number in stock, without having to wait and count them. He also keeps a door which, while not numbered, is covered with paper on top, thus protecting the others from the dust. In handling sample doors, he advised lumber dealers to hang them by a hook from the top, permitting them to swing out when desired for display. In this way doors could be kept free from dust and at the same time make a good showing.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Wanted–Lumber

Wanter to buy Cedar Ties. Apply Box 269, Canada Lumberman, Toronto. 23-1-2

Wanted to buy 1-in. cull Basswood and 1½-in. good Basswood. Apply Box 270, Canada Lumberman, Toronto. 23-1-2

WANTED—Four cars 1-in. No. 2 Common and Better Hard Maple. State when cut, lengths, widths, and price, with Toronto Freight rate. Box 286, Canada Lumberman, Toronto, Ont. 2-5

WANTED—A quantity of Hard Maple and Birch, both for immediate and future delivery. 1 inch and thicker. State quantity you have to offer, price and full particulars. Box 285, Canada Lumberman, Toronto, Ont. 2-5

Hemlock Wanted

Want block about 500,000 feet 1 in. and 2 in. Hemlock. Write the Elgie & Jarvis Lumber Company, Limited, 18 Toronto St., Toronto. 1-2

Wanted

500,000 ft. or any portion 4/4 dry White Pine, Box grade, for immediate shipment to Boston, Mass. Widths to run 5 inches up, and lengths, 8 to 16 ft. Box 268, Canada Lumberman, Toronto. 23-2

Wanted for shipment whenever in shipping condition:
2,000,000 ft. 3 in. No. 1 Com. & Bet. Soft Elm
1,000,000 ft. 2½ in. No. 1 Com. & Bet. Soft Elm
1,000,000 ft. 2 in. No. 1 Com. & Bet. Hard Maple
500,000 ft. 2½ in. No. 1 Com. & Bet. Hard Maple
Box 274, Canada Lumberman, Toronto, Ont. 24-3

WANTED—During summer will need—
Soft Maple
Hard Maple
Birch
Beech
Elm
Ash
Basswood
Can use all grades or whatever you cut at your mill. What have you to offer?
Box 284, Canada Lumberman, Toronto, Ont. 2-5

For Sale–Lumber

For Sale

White Pine and Hardwood, estimated 300,000 feet, will cut to order. G. A. Patrick & Son, Delaware Saw Mills R. R. 2, Lambeth, Ont. 1-6

FOR SALE—Considerable quantity of hemlock ties suitable for Electric Railways, Sidings, etc., ready for immediate shipment. Monteith Bros., Rosseau, Ont. 24-3

We Have a Full Stock

of Hardwood, Hemlock and White and Norway Pine Lumber, Norway and White Pine Piling, up to 60 ft. Keenan Bros., Limited, Owen Sound, Ont. 3t.f.

Lumber For Sale

Purchasers of White Pine would save money in buying now from our three million feet, 1916 cut, because we require financial assistance. Sawing to begin early. Apply Box T., Sturgeon Falls, Ontario. 1-2

Lumber For Sale

200 Pieces 1 x 15 and up 22 ft. Cypress.
375 Pieces 1 x 15 and up 24 ft. Cypress.
Clear for boat building, in stock at Montreal

GEO. C. GOODFELLOW,
c Montreal, Que

White Oak For Sale

Thirty thousand feet White Oak, cut, 1, 2, 3, 4 inches thickness, various lengths from 12 to 32 feet. Also odd sizes, including squares 4, 6, and 8 inch. A snap for quick sale.

CAMERON & CAMERON,
24-3 Beaverton, Ont.

Wanted–Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

WANTED—Office position, Timekeeping, Cashier, Bookeeping, or general assistant to Manager. Small town or country district in New Brunswick or Quebec preferred. "Experienced," Box 289, Canada Lumberman, Toronto, Ont. 2-2

WANTED to hear from lumbermen who anticipate needing a mill foreman this spring, by an experienced mechanic who can give results, open to engagement. Any capacity. Box 283, Canada Lumberman, Toronto, Ont. 2-5

Position Wanted

A young married man, 32 years of age, will be open for a position on or before March the first. Fifteen years' experience as inspector, scaler and estimator; will consider any other capacity; will go anywhere. Box 281, Canada Lumberman, Toronto, Ont. 2-4

WANTED—Position as superintendent of planing mill. Six years' experience in charge of largest up-to-date plants with modern methods and machinery. Gets splendid results and handles plant and men to best of advantage. Would accept American position. Excellent reason for wanting change. Address before January 25th, Box 288, Canada Lumberman, Toronto, Ont. 2-2

Wanted

Position as Lumber Inspector or Salesman. Fifteen years' experience in lumber yards, mills and office; thorough knowledge of White Pine Grades or British Columbia grading; also a general knowledge of export grades for United Kingdom. First class references given. Apply Box 273, Canada Lumberman, Toronto, Ont. 24-2

Wanted–Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents.

Machinist wanted. First Class. Experienced in up-to-date saw mill practice. John B. Smith & Sons, Toronto. 24-24

WANTED—First class hardwood lumber grader and inspector for mill in the Province of Quebec. Must understand National Hardwood Lumber Association rules. Box 291, Canada Lumberman, Toronto, Ont. 2-2

WANTED at once, an up-to-date Band Sawyer for left-hand mill, Maritime Provinces. Must be a hustler and be able to [illegible] capacity. None other need apply. Box 292, Canada Lumberman, Toronto, Ont. 2-3

Wanted At Once

Competent warehouse and commissary manager for large lumber company in Maritime Provinces. Must have excellent recommendation and be thoroughly reliable. Good position for the right man. Box 282, Canada Lumberman, Toronto, Ont. 2-3

WANTED—By lumber firm in Northern Ontario a first-class office man who has had experience in the mercantile business, and who has a general knowledge of the lumber and logging business as far as office work is concerned. Single man between 30 and 45 years preferred. Apply Box 290, Canada Lumberman & Woodworker, Toronto, Ont. 2-3

For Sale–Machinery

FOR SALE—Second hand Bull Lathe, 60-in. swing, 84-in. bed. $150.00 cash; also a lot of Rubber Belting, 6 in. to 16 in., at Low Prices.

MOORINGS MACHINE SHOP,
1-4 40 Pearl Street, Toronto.

For Sale

One No. 3 American Saw Mill, friction and rope feed, complete; and one J. I. Case 36 horse-power portable engine and boiler combined. Both used a short time and in first-class shape. A bargain to a quick buyer. J. D. Campbell, Cornwall, Ont. 2-2

Machinery For Sale

A small "Ad" under this heading, telling of what machinery you have for sale, will immediately put you in touch with buyers. Send us a list of machinery items and we will quote you on a small "Ad." Send the list now, before you forget about it. 1-t.f.

Engine For Sale

Corliss Engine, 150 h.p., 18 cylinder, 24-inch leather belt, heater and pump, first-class condition, no fault, changing plant to electric. Inspect at Guelph Lumber Co., Guelph, Ont. 24-3

For Sale

One Water Wheel, 40-in. Turbine arranged for vertical setting in open flume. Provided with Hand Wheel for operation from Mill floor. Will be sold cheap. Apply G. C. Jackson, Auditor of Claims, C. P. R. Offices, Montreal. 2-2

Machinery For Sale

One McGregor Gourlay second hand Resaw, 54-in. wheels, carries 5-in. saws, machine in first-class condition, only used on light work. Located in Central British Columbia.
Two second hand McGregor Gourlay Q. Y. Planers and Matchers, one 9-in., one 15-in. wide, in good condition, ran every day till October, when fast feed Matcher was installed. Located in Saskatchewan. Box 275, Canada Lumberman, Toronto, Ont. 1-4

WOODWORKING MACHINERY FOR SALE:—1 10-in. Berlin four side Moulder; 1 New Britain chain mortiser; 1 Defiance rounder, borer and jointer; 3 pole rounders; 2 automatic knife grinders; 1 26-in. Whitney smoothing planer; 2 26-in. revolving bed double surface planers; 6 30-in. Ideal pedestal bandsaws; 1 20-in. American wood scraper; 2 two-spindle wood shapers; 2 power feed rip saw tables. H. W. Petrie Limited, Toronto. c

Saw Mill Machinery For Sale

Second-hand Machinery for Complete Saw Mill, all practically new, in excellent condition, including Bullwheel, Steam Kicker, Steam Nigger, 42-in. Steel Carriage, 10-in. Steam Feed, 8-ft. Waterous Bandmill, 5-saw Slab Slasher, 48-in. Edger, Trimmer, also Independent Lath-mill, and Filing Room outfit. Power Plant complete. Offers accepted for all or any part. On view at the Waterous Engine Works Company, Brantford, Ont. t.f.

For Sale

Steam Log Hauler with 14 Sleds, Wooden, heavily ironed. A Bargain. Apply G. C. Jackson, Author of Claims, C. P. R. Offices, Montreal. 2-2

For Sale

Two 54 in. x 12 ft. Stationary Boilers, in use only 8 months, complete with full arch fronts, smoke box and stack, and all regular fixtures and fittings, working pressure 100 lbs.

WILLIAMS & WILSON, LTD.,
2-2 Montreal, Que.

Business Chances

Business Opportunity

Make your opportunity knock at the door of every Lumberman in Canada by placing a small "Ad" about it in this column. Our rate is $2.10 per inch per issue. Now is a time when monied men are seeking good bargains. What have you to offer? 1 t.f

Saw, planing, shingle and chopping steam mill, capacity 20 M. First-class order, six acres land site on C. P. R. Stock about $1,000. Plenty of logs, good farming district. Hydro lights in village of 400, would make best of factory site. Death of owner reason for selling. Snap for quick sale, as present owner has other interests. Price $7,000 for land, stock and mill. Apply Box 287, Canada Lumberman, Toronto, Ont. 2-2

Miscellaneous

Timber Limit For Sale

Newfoundland timber limit, 112 square miles, well situated right on railway and within several miles of ocean shipping port; will average nine cords pulp wood and two thous. saw logs per acre, spruce and pine. Present demand for pulp wood and with duty removed by Newfoundland Government, makes this an exceptional opportunity for investment at a minimum of outlay. Particulars from Box 277, Canada Lumberman, Toronto, Ont. 1-4

Automobile for Exchange

We have a "Light Six" Chandler, 1915 model, electric light, self starter, and all up-to-date equipment, in good condition. Cost new $2,350. Will sell in exchange for lumber, any kind of lumber, dead cull and better, and will make a big cut in the price of the car. J. & W. Duncan, Limited, 1801 Ontario East, Montreal. 24-3

30 Replies

are often received to "Wanted" and "For Sale" ads. on this page. Even 50 replies are not an uncommon return from the investment of the small amount a condensed ad. costs. And isn't that good business—to get right into close touch with so many people interested in what you have to buy or sell? For you can be sure their transactions with you will not end when they have closed the business your single ad. announced.

Eight Months at Sea

The British owned ship Wm. T. Lewis arrived recently at Plymouth, England, after a journey from Everett, Wash., which occupied eight months, with a cargo of 2,000,000 feet of lumber destined for Sheerness, England. The vessel had an eventful passage, having been attacked and shelled by a German submarine. Her crew expecting her to founder, abandoned the vessel. The ship was picked up by tug the next day and towed into Bantry Bay, Ireland, after being out over 5 months.

Miscellaneous Items of Interest to Lumbermen

Mr. R. M. Cox, of Robert Cox and Company, Ottawa, is now on a visit to England.

Mr. T. Z. Pariseau, of Pariseau Freres Ltd., box manufacturers, Outremont, P. Q., has been elected a member of the Montreal Board of Trade.

Jos. Bedard and Sons, manufacturers and dealers in lumber, Richmond, P. Q., have sent out a calendar for the year 1916 to their friends in the trade. The calendar contains an attractive colored photograph entitled "The Forest Stream," which will make it welcome in the offices of lumbermen.

Blair and Rolland, Limited, wholesale lumber and pulpwood dealers, 20 St. Nicholas Street, Montreal, have sent out to their friends an excellent calendar with a fine picture in colors, of the Grand Canyon through the Pines, by Thomas Moran, N.A. The calendar is of large size, a feature being the clear character of the date figures.

Serg't A. Grant MacDonald, formerly of the 125th Battalion, who was assistant superintendent of construction for the Schultz Bros. Company Ltd., Brantford, has been transferred to the Canadian Aviation Corps with the rank of Flight Lieutenant. Lieut. MacDonald's recent departure from Brantford was made the occasion of a presentation to him, by the firm, of a handsome portmanteau.

The Fassett Lumber Company Ltd., Fassett, P. Q., manufacturers and wholesalers of lumber have sent a large calendar to their friends in the trade this year. A colored photograph entitled "The Edge of the Lake" is handsomely mounted upon the calendar. The picture represents an attractive woodland scene with white birch and evergreens in the foreground and a glimpse of water in the middle distance. The picture and calendar pad are handsomely mounted on white board with green margins.

A California despatch states that a lumber buyer who was in that city early in January was negotiating for 200,000,000 feet of lumber for the use of the French Government. Five of the largest mills on the west coast were expected to have to co-operate so as to fill the expected order. Among the concerns reported to be bidding for the business were the E. K. Wood Lumber Company, Chas. Nelson Company, Hammond Lumber Company and Pope and Talbot. The despatch stated also that the British Admiralty was expected to furnish tonnage for the shipment of this stock.

Reports from St. John, N. B., state that the lumber cut in St. John County this year is not expected to be more than 35 per cent. of what it was last year. The lack of snow has delayed operations, and lumbermen are not anxious to take out as large stocks as formerly. Mr. A. F. Bentley of St. Martins expects that the cut may even go below 35 per cent. In the district along the St. Martin's-Hampton Road, for example, he says that the cut last year was between 12 million and 13 million feet and that this year 4 million feet will be the outside limit. Conditions throughout the county, he says, are about the same. He also expects that in other parts of the province similar conditions will prevail and the general cut in New Brunswick will not be more than 50 per cent. of what it was last year.

Klim a Valuable Camp Supply Article

H. B. Clark, who has been demonstrating for and representing Canadian Milk Products Limited for a long time has left on a trip through the lumber district of Ontario. "Klim", the lumbermen's milk in powdered form, is well known to many large lumber companies in Ontario who use it regularly for camp milk. Mr. Clark is specializing with Klim and is visiting those lumber companies who are either using Klim regularly or wish to know more about it with a view to using it in their camps. The company state that Klim is the only form of milk used in all the soldiers' camps throughout Canada today. Klim was adopted by the Dominion Government as a regular army ration and milk at the beginning of the war, after most exhaustive tests were made with it. The lumbermen should be familiar with a product which needs no better recommendation of its purity, genuineness, food value, economy and convenience. Canadian Milk Products Limited, Mail Building, Toronto, have been manufacturing powdered milk in Canada for twelve years and two years ago perfected the process for producing Klim which, when reconstituted with water, produces a liquid that can hardly be distinguished from fresh, liquid milk.

A number of annual meetings of Georgian Bay Associations were held at the Queen's Hotel, Toronto, on January 11th and 12th. The companies holding meetings were:—The Vermilion River Boom Company; the Spanish River Improvement Company; the Sable and Spanish Boom and Slide Company of Algoma, Limited; the Mississaga Improvement Company, and the Georgian Bay Lumbermen's Association. Matters of routine constituted the business of all the meetings.

Review of Current Trade Conditions

Ontario

There is practically nothing new to report in connection with the lumber trade in Ontario. At this time of year all firms are more or less busy with their stocktaking operations and in making up their annual reports. The result is that enquiries fall off extensively for a brief period. In former years, after the stocktaking period it has been customary to consider that trade would continue quiet until the opening of spring business. This year there is a fair likelihood of a better situation. The stimulus given to trade by Canada's great crops during the past year and by the extensive war orders for all kinds of supplies and boxes in which to ship them have created an abnormal situation and it is not unlikely that a fair demand for lumber will be worked up within the next few weeks and continue until it is added to by the opening of the usual spring business. The extensive trade resulting from the Government's requirements in shell boxes has to some extent shown a falling off as the Government has not been so great a buyer of boxes during the past month. Since the Shell Committee was superceded by the Imperial Munitions Board, the old system of shell box purchasing has been altered. We understand now that the Munitions Board is sending out specifications whenever it requires boxes and that the specifications are accompanied by blank forms upon which to tender. Prospective tenderers report that the result of this is much keener competition in the production of boxes and much less dissatisfaction from parties who formerly were not permitted to tender. While this situation may reduce the profits to be made in shell box production and may keep the volume of production down to some extent, the clearing of the air from the great number of complaints will be a benefit to all concerned. We hope to see it react to some extent and cause a fairly good and steady market for shell box material. There is a fair demand for most varieties of stock in Ontario, and although the actual volume of trade is light at present, prices are well maintained and stocks are light. Production this winter will in all probability show a considerable decrease as compaerd with previous winters and even as compared with last winter. Practically all the important factors are working together in the direction of a firm and steady market in the spring and if the building situation and the manufacturing activity of the country develop as present conditions would indicate, the year 1916 ought to be a very prosperous one for the lumber trade.

Eastern Canada

The lumber trade at Montreal is rather quiet on account of the winter weather and the annual stock taking operations. In general, however, the trade feels quite confident about business for 1916, and there is a fairly general belief that orders will show considerable increase during February and March. Stocks in the local yards are reduced greatly and are likely to be replenished for spring business. A fair revival in building operations is also looked forward to. Shell box production has been reduced considerably of late as the output has been ahead of deliveries. The trade with the United States continues in fair quantity and spruce prices have improved to some extent.

The spruce market at Boston is stronger. Millmen are asking a base price of $27 for frames. The demand for random is a little quieter, but there is a fair volume of trade. Quotations on random are:—2x3, $21; 2x4, $22; 2x5, 2x6 and 2x7, $21 to $21.50; 2x8, $24.50 to $25; 2x10, $26 to $27; 2x12, $27.50. There is also a fair enquiry for boards and prices are quite firm. The spruce market at New York continues strong. Clear stock is very scare, and there is a good demand for low grade stock. Prices are all firm. The demand for hardwoods at Boston continues to improve and quotations are firm on all lines. The best grade of 1 in. plain oak has been bringing $64, and $61 is the lowest price that has lately been received. There is not much enquiry for quarteerd oak, although a little improvement is noted. One inch 1sts and 2nds are offered at $99 to $100. There is quite an active trade in maple and birch. The hemlock market at Boston shows improvement. Stocks of hemlock boards are rather heavy, but millmen have been marking up their prices and holding them firmly. A prominent wholesaler is holding clipped boards 10, 12, 14 and 16 ft. for $22. Shingles at Boston are quiet. Prices are about steady. Some of the best makes of white cedar extras are offered at $3.40 and fairly good extras are bringing $3.30. Clears are selling at $3 and second clears are $2.65 to $2.75. Lath continue to grow firmer in price. The lowest price asked for 1⅝ in. by the mill is $4.25 and some are asking more. Quotations for 1½ in. lath have been advanced by some mills to $3.90, but some can be bought at $3.60.

Great Britain

The consumption of wood on the spot market at London, continues in a steady manner. Weather conditions have been quite mild and as a result forward purchases have continued to some extent, in spite of the heavy charges of freight and exchange. Values continue to advance, more particularly for the lower qualities, and the prices of all kinds of box-maxing material are very high. Fresh arrivals have been on a very moderate scale. Indications are that all wood goods will gradually increase in value and that present stocks on hand are sufficient for requirements until next open water.

At Liverpool, the demand for spruce is still a very important feature, and prices appear to be going ahead steadily. Eager buyers are on hand for anything reported to be coming forward. A spot cargo of 7 in. and 8 in. and oddments was sold recently at a very substantial advance on former prices. Only a few odd parcels are expected to arrive in the near future. Freight room commitments have so far been very limited. An interesting event lately was the sale of timber used in the construction of the Liverpool exhibition. This was disposed of by auction at prices much above the original cost. The hardwood market at Liverpool is marking time. Prices are quite firm and sellers are not anxious to take many orders, believing that their present stocks are worth holding. Arrivals of hardwoods are moderate. Quebec birch shipments are at an end for this season, and stocks of particular thicknesses are less than they should be. This is particularly the case in 1-in. to 2-in. Prices are high, but are very likely to go higher, as the demand is quite strong.

At Manchester, the steady advance in the value of wood goods continues, and it is difficult to say what the maximum will be. Spruce at present is selling at £21 for 3 in. x 9 in.

The volume of business at Glasgow continues fairly large, and prices continue to advance. Spruce is still the chief feature of interest and prices are continually stiffening. Each succeeding sale seems to be at a higher price than the preceding one. There is already a very apparent shortage in most sizes and the position is likely to be aggravated considerably before spring. The scarcity and high price of spruce are creating an interest in the cheaper grades of yellow pine, numerous transactions being reported of late in 3rds and 4ths, particularly in the narrower specifications. But yellow pine prices have also been advancing quickly and stocks are now much reduced.

United States

Lumber trade conditions in the United States during the first two weeks in January were naturally inclined to be quiet on account of the inventory season being in full swing. In spite of this however, there has been a good volume of trade and market conditions continue on the same favorable basis as they have been for the past month or two. In Chicago, for instance, trade is quite active. The volume of building operations is large and is being rushed in most cases. The factory trade has been good and yards catering to this business have been making steady shipments. During the week ending December 31st the receipts of lumber at Chicago amounted to 54,230,000 feet as compared with 30,444,000 feet for the corresponding week a year previous. The total receipts for the year 1915 amounted to 2,379,729,000 feet, an increase of 164,033,000 feet as compared with 1914. Shipments for the week ending December 31 were 25,055,000 feet, an increase of 10,010,000 feet as compared with the corresponding week in 1914. The total shipments during 1915 were 1,133,417,000 feet, 124,351,000 feet more than during 1914.

The demand for northern pine fell off as was to be expected during the last week of 1915 at Chicago, but wholesalers are quite confident that the prospects for early spring trade are good. Prices on all grades continue firm and the best demand at present is for the lower grades. The volume of trade in northern pine at Minneapolis is comparatively large and prices are firm. There has been a strong demand from woodworking concerns. The low grades are scarce and in good demand at firm prices. At New York, the northern pine trade is active and enquiries are quite satisfactory. Prices continue strong and receipts are light. White pine has held up well in price at Buffalo, although the usual quiet at the New Year season was in evidence. Prices continue firm and wholesalers are not carrying heavy stocks. Everybody is expecting a better year than last, and the spring business outlook is good. Similar conditions prevail at

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. Bole, Pres. F. H. Goff, Vice-Pres. E. C. Barre, Gen. Mgr. W. A. Saurwein, Ass't. Mgr.

North Tonawanda and there are also indications of a good winter trade. Enquiries are more numerous and more definite.

The hardwood market at Chicago is in better shape than it has been for two years past and wholesalers are looking forward to one of the best years that they have ever experienced. Inventories have shown that the consuming manufacturers have small stocks. Prices continue very firm and manufacturers are not in a hurry to make contracts for next year at present levels. The hardwood markets at Minneapolis are rather quiet, but the situation is strong in all lines. Some lines of birch are low and clear maple is also scarce while oak is firm. At New York, the hardwood trade continues active. Enquiries have fallen off a little during the inventory period, but prices are firm. The demand for oak, birch and maple is good. There is a stronger demand for hardwoods at Buffalo than there has been for some time and dry stocks are in fair demand. Oak, maple and ash are selling well.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Montreal Trade Confident About 1916

Montreal, January 11th. (Special to the Canada Lumberman): Although business is slow just now owing to the winter conditions, and to stock taking, there is a general feeling of confidence as to the current year's trade, some lumbermen holding the opinion that February and March will witness an appreciable advance in orders. The local yards are very short of stock, having used up most of the large amount of lumber which was on hand at the beginning of 1915. Consequently they will be bound to order more freely for the spring; the building program may not be extensive, but it will probably be sufficiently important to cause a fair amount of trade for the wholesalers and retailers.

The continued shutting down of some of the factories making shell boxes has restricted the sales of birch and spruce. Production is ahead of the deliveries, and now that the rush for boxes is over, it is probable that the factories will work on shorter time than has been the case for some months.

Inquiries and orders for timber are improving. The latter are not as large as was usual in the days of the great industrial activity, but it is significant that they have lately picked up in an encouraging fashion.

There is still a fair amount of trade for United States account, and prices for spruce have in some instances improved.

The Montreal building permits for December totalled $2,044,425, an increase of $1,683,290, but this apparent large gain is explained by the fact that the total is made up almost entirely of buildings for the Harbour Commission for the year, which are not bound to be included under the law. Without these buildings, the permits would show a decline. For the year the permits were $8,511,221, or a decrease of $8,883,023.

While ground wood is dull, on account of the small requirements of United States buyers, sulphate pulp is a strong and advancing market. Prices are likely to go still higher, in view of the limited stocks coupled with restricted importations to the United States from Europe.

Ottawa Trade Handicapped by Embargo

Ottawa, January 9th, (Special to the Canada Lumberman):—Local lumbermen are not overtaxed with orders at the present time, but they have good foundation for complaint in view of the fact that the orders they have in hand for the United States cannot be shipped. The embargo recently placed on the New York Central lines on material of export is hampering and annoying the firms here, who have thus far been absolutely unsuccessful in getting even the small orders through to New York.

The soft weather, which lasted for a few days this week, if followed by a good cold spell, will result in a great deal of good and improve conditions for the woods operations. It will soften the thin sheet of ice on the river and with the return of the cold weather drawing will be carried on with greater activity. Local men also look to an improvement then in the roads, which will also result in allaying the difficulties of hauling now being experienced.

Stock-taking is occupying the attention of lumbermen in Ottawa and vicinity just now, and they do not look for any improvement in trade during the next few weeks. A few orders for birch and pine have been received lately but none of any proportion to speak of. There have been practically no changes in prices.

North Shore Cut Reduced Twenty Per Cent

Thessalon, January 6, (Special to the Canada Lumberman):—The weather during the month of December was ideal for lumbering along the North Shore, but during the fall months of October and November it was most unfavorable, with rain nearly every other day. It was almost impossible during October and November to get any work done; in fact some camps broke up for a month. Just at present the weather is soft and there is only about six inches of snow in the woods and no hauling can be done. If no snow falls within the next two weeks the situation will be serious. There will be a falling off of 20 per cent. in the output in this district during the present season as compared with a year ago. Some firms have very long hauls to the water this year. One firm has about 300,000 ties to haul over six miles. The finest stock of logs seen here for years is being cut on the reserve by the Estate of E. B. Foss, who are taking out about 20,000,000 feet this season.—Algoma.

London Markets for Canadian Wood Goods

Churchill & Sim, London, Eng., in their monthly wood circular dated December 3rd, say:—The month's deliveries from the docks are about equal to those of last year, but some 9,000 standards less have been delivered overside as compared with November, 1914, when the importation was exceptionally heavy and stock was immediately required for urgent work in connection with the war. The scarceness of all descriptions of red and white wood available for immediate use has intensified the firmness of the market, and prices were again stronger all round. Forward business with Swedish shippers was resumed at the higher figures quoted in October, and some considerable lines of stock changed hands. Freights were appreciably dearer, necessitating some very high quotations towards the end of the month, including a guaranteed rate of exchange, but the demand was strong enough to warrant merchants paying the prices, and the whole market has had a lift up in consequence.

Stocks of timber, deals, etc., at the public docks on December 1st included:—

Colonial	1915	1914	1913	1912
Pine deals and battens in pieces	365,000	478,000	589,000	512,000
Red pine ... ... in pieces	79,000	49,000	21,000	24,000
Spruce ditto ... .in pieces	1,310,000	694,000	849,000	538,000
Oak timber ... . in loads	.....	.....	.....	.....
Oak planks, etc. (American), ... in loads	2,789	5,332	3,415	1,207
Birch timber ... . in loads	1,259	310	319	226
Birch planks ... ... in loads	2,589	3,917	6,737	5,003
Elm timber ... . in loads	1,055	2,071	1,540	547
Ash ... ... in loads	14	45	.....	12
Yellow pine timber .. in loads	45	225	1,030	956

From the St. Lawrence there has been imported:—

Pine deals, 425,000 pieces, against 248,000 pieces in 1914.
Spruce deals, 1,894,000 pieces, against 763,000 pieces in 1914.
Birch planks, 322,000 pieces, against 174,000 pieces in 1914.

and from New Brunswick, etc.—

Pine deals, 69,000 pieces, against 28,000 pieces in 1914.
Spruce deals, 1,812,000 pieces, against 793,000 pieces in 1914.
Birch planks, 322,000 pieces, against 383,000 pieces in 1914.

Shipments both of pine and spruce have been lighter during November. There has been a sympathetic rise in the price of pine deals, especially of the lower qualities, in harmony with the firmness of the general softwood market. Spruce has been particularly susceptible to the altered conditions, and the upward tendency of values shows no signs of being checked.

There is no alteration in the market for Canadian hardwoods, but birch planks have shared in the general improvement.

C. S. Battle, Vancouver, B. C., has been successful in his suit against Frost & Company, Chicago, in the Supreme Court at Vancouver, to recover $145,000, representing principal and interest due on the sale of 15,250 acres of timber land in the Rupert district of Vancouver Island. The sale took place in 1910, when $50,000 was paid on a total price of $190,000, and the balance with interest was sought in the court action.

It's all over for 1915

The year started in with a slight feeling of uncertainty permeating the channels of trade, but as the months went by a feeling of confidence was forced to the front which reached its culmination when the big North-West grain crop was assured.

As far as our own particular business is concerned we struck out at a good gait from the drop of the hat, and for the first few months showed an advance in our sales over the previous year of forty per cent. We were not able to hold this all through the year—you will agree that it would have been most remarkable if we had—we did, however, pull out at the end of business with an advance of twenty-five per cent. over 1914.

To a force of salesmen working in thorough sympathy with the house, a staff of able assistants in the offices and warehouse, who are ever zealous to push our business to the highest notch of efficiency, and to a bunch of loyal customers who are thoroughly appreciative of our anxiety and desire to serve them in the most capable manner possible, we attribute the splendid results which we have accomplished during the year under review.

And Now For 1916

We've got our programme ready—our plans are laid, and we're going to keep on doing more business, because we're going to make ourselves so attractive by values which we will offer, and by service which we will render that you will be prompted to push more business to our shop, and when you do we'll promise to take good care of it, for we haven't reached our capacity yet in our new premises and equipment, and if, and when we do, why of course we'll make another expansion in our facilities, for be assured we want to continue to grow, and to enable us to do so we want a lot of live-wire buyers to come along with us.

If you're one of this kind hitch up with us for 1916—we're not bad company to travel with—ask anybody who knows us—ask him what kind of an average he gets from us. Our boys are now out hunting for orders and have a number of inviting propositions for you. If you don't happen to be in their path why just send us an enquiry for samples and prices.

We wish one and all A Happy and Prosperous New Year.

CHURCH ST. AND ESPLANADE TORONTO

Work Up Business during the Winter

A year has now ended, but which brought more or less of disappointment to business men, particularly those who began it with exaggerted expectations, which were not realized. I think this year, however, has been one of minimum disappointments as far as volume of business is concerned. The slowness of trade caused by the late spring, has been compensated for by the rush of business in the late fall and first month of the winter, and probably the retail lumbermen have never faced a new year with greater probabilities of having a good business during the coming season than they do at the present time. The agricultural tank of supply is full. The pressure of demand will be great in consequence and it will be up to lumbermen to obtain their share. To insure this for the retailers, it is not enough for them to let their stock offer itself for sale; but they must realize that the prosperity of the farmers will naturally tend to excite the desire in them for having more and better things for convenience and improvement in their business and for the enjoyment of life in general.

You know that most people when they have plenty of money in their pockets have an itching desire to spend some of it. In the lean years they have thought of what they would have when the time came that they were able to buy, and usually they do when that time does come. The average farmer now looks forward to the time when he will be able to buy an automobile. This is one of the principal things he is aiming for in the future. To many, no doubt, this time has already come, and they already have what they planned for, but there are others who will be influenced by seeing the machine their neighbors have got, and with sufficient means from this year's crop, they, too, will feel like buying one. Now, you know, there is many a farmer who needs a better house; more and better conveniences for the wife to do her work; more room for his growing family and a larger degree of attractiveness for them. He needs, too, a building for sheltering the machinery he has got. All these and other things he needs more than he does an automobile. But the question is, how is he to be convinced of this? Every lumberman will ask this question and scratch his head over the problem. He will see farmers buying machines whom he knows ought to have better living conveniences than they have. But the makers of automobiles and their agents have beat him to it and gotten in their work ahead of him. All the year round they have been bombarding him with their advertisements and plausibly worded literature setting forth the economy, pleasure and the advantages of owning a machine. All this has so worked on his thought and imagination that unconsciously it has created a desire to have one. During this period of desire incubation, the lumberman has been silent. He has allowed the mind of the farmer to be swayed by others who are after the money the farmer has to spend. This is the answer to one side of the question and shows why he has lost out.

What the Retailer Must Do

The other side is a plain indication of what he should and must do if he would reap the full benefit of this year's crops. He, too, must work upon and cultivate the mind of the farmer to the end that he may see and be convinced that he and his family need the things I have named more than the machine. He must be educated to see and understand that his wife and children are more to him than all his other possessions; that if he would have his wife contented he should provide her with the degree of room and conveniences for her work as he has for his own; that if he would have his boys and girls interested and satisfied with farm life and keep them from leaving home for the attractions and modern conveniences of living in a city he must provide them with the comforts of a modern dwelling and give them a chance to develop their social instincts as well. Moreover, make the farmer understand that the automobile is secondary to these considerations; that it is an auxiliary and a necessary part of the home attractions, but only a part, and not the whole thing, for the machine is but the connecting link between the attractive home and the social diversions of the town, and therefore, as I say, secondary in the living of a farm life.

There is no line of business but that is hot on the trail of the farmer's surplus. "As a man inclineth himself so is he," and these competitors of the lumbermen are all the while working on the inclinations of the farmer and directing them for their special benefit. The lumberman, therefore, must work upon and cultivate the farmer's mind and incline it in their interest as well. But some will ask, "How the dickens am I going to do all this together with my other work in the yard?" In times past this was reason enough to deter any dealer from attempting to do anything of the kind, but the real reason why most dealers don't attempt any educative advertising policy is because they lack both the will and the ability to do it effectively. Then again, they don't recognize the value and importance of it. Their principal idea is to sell lumber. An important feature of selling is creating in the mind of the party a desire for the particular thing you are trying to sell him. When this is done the sale is half made. Now apply this to what I have been talking about and you will understand that by stimulating the farmer to consider those things and creating in his mind the desire and determination to have them, the sale is already made in his mind and it is up to you to do the rest and make the contract between you and him and the contract also for the material. This is nothing new, for it is being done every day, and in some degree, by yourself. I am simply bringing out what a sale really is. Ordinarily, the making of a sale is selling to the customer what he has already made up his mind to buy. It is, of course, not to be expected that every dealer feels himself competent to create a desire for lumber before people themselves think they want it, but this is one of the essential features of modern merchandising. The idea can be carried out in a small town as well as in a large city, because all people are actuated by motives and desires of practically the same character.

It is not very comfortable riding around in the country calling on the farmers these winter days. You don't see as much of them as you do at other times in the year. Those bad roads and cold weather put an embargo on your social visiting. When they do come to town you see comparatively few of them. Both you and the farmers have more time in the winter for social intercourse, but you can't get at each other. You would like to talk with them about what they are thinking of building this coming year, but you have to wait till you see them. This was all very well years ago and was accepted as being in the natural order of town and country intercourse. But the old order of things has changed. The farmers are being "farmed" by your outside competition every month in the year. In fact, they choose the winter months for extra efforts to get in communication with them. They use this season as their seeding time for implanting the seeds of desire in the farmer's mind for what he would like to have. They have a salesman in every farm house in the country to stimulate this desire. Having nothing from their home dealers, the farmers allow this salesman to talk to them and it stands to reason they are influenced by it. You would be, too, if you were shut up in a farm house on a stormy winter day and had two or three catalogs and a lot of other attractive trade literature to read and pass the time. You can't help being influenced by what you read, and it is a curious thing that we form our opinions more by what we read than what we hear in other ways. This is an important fact for you and every other merchant to remember.

Use Your Local Papers

Now, to counteract the influence of this foreign salesman in the farmer's home this winter, you can use the same method if you will, and send out one of these paper salesmen every week, and let him be your agent for talking and telling the hundreds of farmers what you would say if you were talking personally with them. They know you, and they don't know the other fellow who lives at a distance of a day's travel on a limited train. The medium for doing this is right at your hand, never mind if you don't personally like the editor. His paper reaches and is read by hundreds of people you would like to visit and talk with. Let his paper act as a phonograph to tell folks what you want to say to them. Or, to use another figure of speech, let the paper act as a press drill to sow your business seed and informing knowledge of lumber and building matters. It would cost you time and money to travel around and call on these people you want to see. Why not pay for space in the paper and let the post office do the travelling to deliver your printer's ink salesman and agent?

If you feel unable to write yourself what you would like your paper saelsman to say, employ someone who knows how to do it, just as you hire a bookkeeper to do what you are deficient in. You always want an employe to be efficient in his work, why not, then, employ an expert that will get you up advertising matter and other information that will make people read it and thereby pay you for the investment? Most of you fellows are pretty fair salesmen or you wouldn't be holding your jobs. It's the way you have, and the way you talk, that makes you a aslesman. Now if you will transfer these selling qualities into written words, using practically the same language, you will have written a pretty good ad.

The great fault with most lumber dealers in the advertising is, they attempt to advertise their whole yard. This is a mistake, and an expensive one. Besides, it doesn't do what is wanted. The proper and most effective way to advertise is to confine it to one or two articles at a time and be sure they are seasonable, of course. Tell the public why you do it. Tell about where they come from, how they are made, how to use them, why they are best for the purpose. People will read an advertisement of this kind, because it tells them something in a personal way. If you want to advertise the whole yard, have a large photograph taken of it, and get several hundred copies printed, frame them and present them to your customers. Another good idea, too, when you sell a house bill get a picture of the house when completed, give a copy to the owner and retain one to hang up in your office, after a while you will have a good picture gallery of your prowess in bill selling. These little things cost a few dollars 'tis true, but thy help to keep you in the mind of the public,

"Everything in Canvas"

Contractors to the Army and Navy of the British Empire

DURING the past few years our manufacturing facilities have increased fourfold. The amalgamation of the Woods Company, with the Smart Bag Co. into which it is now known as Smart-Woods, Limited, offers for your approval the products of one of the strongest and most reliable manufacturing corporations in the whole of Canada.

AS a result of this amalgamation, not only have our manufacturing facilities been wonderfully increased, but we are now in a much better and greater position to offer you all lines previously stocked, as well as many others that come direct from our recently added factories.

In addition we may say, "Our foreign trade has increased by leaps and bounds—both European and American—and we are prepared to enter into competition in every civilized portion of the globe."

Smart-Woods' Special Surveyor's Tent. Write for Catalogue.

WE are now open for competition in every thing that is possible to be made out of canvas, as well as all lines of Lumbermen's and Contractor's Supplies, such as Blankets, Clothing, etc., etc., it being one of our greatest pleasures to quote prices at any time. Our wonderful large stocks of raw material and increased number of factories, (Ottawa, Toronto, Montreal, Winnipeg, Renfrew and Welland), enable the execution of largest orders on shortest possible notice.

Samples and quotations will be furnished at any time and every possible expediency rendered to hasten shipments as soon after ordering as possible.

Smart-Woods LIMITED

OTTAWA - MONTREAL
TORONTO - WINNIPEG

Jenckes Boilers

The Jenckes Machine Co., Limited

Sherbrooke Montreal Cobalt So. Porcupine St. Catharines Toronto Vancouver Nelson

and make you talked about, which is an important element in advertising.

If you can get people to come to you in consequence of this sort of advertising and sending out your paper salesman every week, as I have indicated in the foregoing, it will do much to eliminate the price competition you complain of, for you will be pretty sure to sell far more bills without it than you do by the old way of doing, and the extra profits obtained will more than reimburse you for the money cost of the methods I have suggested.

What Every Dealer Should Have

A valuable thing for every country dealer to have is a list of the names of every farmer in his territory, and as far outside of that as he may choose, designating whether resident owner or renter. For convenience of reference, I would advise using the index card system, and on each card you can note many valuable particulars such as, in whose name is the title of the farm, whether mortgaged or not, the number and kinds of buildings on the place, the credit character of owner or renter, the location of farm and sub-division of section, and any other particular that will be handy for referring to. It will also serve as a mailing list; which is something that is greatly needed in every lumber office. You can get some of this information from the public records at the county seat. It will take a little time to gather all this information and enter it on the cards, and the beginning of the year is a good time to start it. If you are too closely confined to the yard business, it will pay to hire someone who is not doing much this winter to canvass the territory for you. I had a list once of 2,500 names of farmers living in our county, and what do you think? I was fool enough to sell a copy of it to a dry goods concern in New York City. They offered me a good price and I fell for it. That was before we had heard anything about mail order houses and their ways of doing things. We have learned a whole lot since then, haven't we?

Finding the Year's Results

I presume this issue will reach most of you at a time when you will be too busy to read it, your whole atttention will be given up to the job of invoicing and figuring it out, and whether owner of the yard or manager, the great idea that will obsess your mind until it is finished is the amount of profits the results will show. The concrete interest of the owner is the amount it will add to his wealth. For the manager it means the degree of success that has attended his year's running of the yard. Doubtless he will also have a shade of expectation of getting a raise in salary if the results are good, but no matter whether he is justified in this or receives it he has the natural feeling of a good business man of wanting to know at least the fact of his having "made good" for the year. Even though a manager don't get a "raise" it is a satisfaction to know that he has done well for his employer. It acts as an encouragement also, and puts an edge on his determination to keep up his efforts and surpass them if he can for the coming year. The yard owner and his manager should be business associates with the same communion of interests for the promotion of the success of the business and, therefore, it is a part of wisdom for the owner to let his associate know that he has done well his share in the year's business. It should also be incumbent on the manager to show that he is worthy of this degree of confidence and refrain from taking advantage of it in any way. He who works for his salary only gets only his salary out of the business. But in working with his employer and taking the interest of a real business associate in the business he gets both pleasure and salary out of it. The reward for loyalty don't always come when we think it should. But sooner or later it surely comes.

C. H. KETRIDGE, in the Mississippi Valley Lumberman.

Always in Your Stable
Stops Bleeding

The wise horse owner will always have in his stable a supply of Douglas Egyptian Liniment. It is so easily and quickly applied and always proves a rapid cure for the many ailments of horses.

It is the only liniment on the market that **will stop bleeding at once.**

Free samples and literature mailed on request.

Douglas & Company
Napanee, Ont.

Liverpool Markets for Canadian Woods

Alfred Dobell & Company, Liverpool, Eng., in a report upon November trade in Canadian woods, say:—"Waney board and square pine—No change. Oak—There was only a limited consumption. Prices higher. Rock elm—Logs of large dimensions are in request, but small wood is neglected. Birch—Logs—The moderate arrivals, which were from St. John and Halifax, met a good demand at firm figures. Planks—The import was heavy. There was a good consumption at unchanged quotations. Pine deals and boards—An improved enquiry at higher figures. New Brunswick and Nova Scotia spruce deals—The import to the Mersey and Manchester was 670 standards more, while the consumption was 1690 standards less than for the corresponding period last year. The quantity going into consumption is governed by the restricted transport facilities. The combined stocks stand at 29,110 standards. Values are advancing.

Penobscot Operations Reduced

A despatch from Bangor, Me., says:—Indications are that the lumber cut on the east branch of the Penobscot River will be about one-third less than average this season, and will total close to 25,000,000 feet, and including a few small independent operations. Last year, the total drive from the Penobscot east branch was about 41,800,000 ft.

The Eastern Manufacturing Company, which formerly cut 20,000,000 feet or more on these waters, is cutting none this season. Last year, this concern cut only about 3,500,000 there.

On the upper waters around Chamberlain Lake, C. Murphy & Son, of Old Town, have an operation which will turn out about 3,000,000 feet, and at Grand Lake, Moses Wadleigh, of Old Town, is cutting between 3,000,000 and 4,000,000 feet. Lower down on the branch at Seboois stream, E. G. Bryson, of Houlton, has an operation of about 5,000,000 feet. Paul Gagnon is cutting about 2,000,000 feet in the same section. Between Seboois stream and Grindstone and on Seboois stream, about 12,000,000 feet are being taken out by the Jordan Lumber Company, of Old Town, and the Barker Lumber Company, of Milford.

Much pulpwood is being cut on the east branch waters by the Lincoln Pulpwood Company. This is in four-foot lengths and will come along after the drive in the spring.

Great Britain's November Imports

Great Britain's imports of wood goods from Canada during November 1915 and 1914 amounted to the following totals in quantity and value:—

	Quantity.		Value.	
	November 1915.	November 1914.	November 1915.	November 1914.
Wood (sawn or split fir) ..	79,650	79,459	380,614	267,930
Wood (hewn)	1,428	969	13,800	8,857
Wood (sawn or split, planed or dressed)	5,110	4,611	25,948	17,989

The Mountain Lumber Manufacturers' Association has transmitted to the Hon. W. R. Ross a copy of a resolution passed at the recent joint meeting held at Calgary between the lumber manufacturers of Western Canada and the Western Lumber Retailers' Association. With reference to the market extension work carried on by the department, the meeting resolved: "That the people of the West owe a debt of gratitude to the officials of the Forestry Department of British Columbia for their efforts in inaugurating more effective and modern methods of assisting the farmers of the West to give preference to Canadian products, and rendering more efficient the service between producers and consumers."

HIGH QUALITY FOOD

is essential to the working energy of your lumber jacks. It is our pride that all products leaving our mills are inspected to see that only the highest quality is shipped.

Tillson's Rolled Oats
Rainbow Flour—Top Patent Manitoba.
Goldie's Star—Famous Blended Flour.
Lily Flour—For Pies and Pastry.
Split Peas, Pot Barley and White Beans,
Bran, Shorts and Western Feed Oats.

GUARANTEED ABSOLUTELY PURE

EDGINGS

Ontario

Nathan Calder, Listowel, Ont., will erect a planing mill at a cost of $5,000.

The city of Ottawa will call for tenders about the end of January for the supply of plank and cedar for 1916. The mayor of Ottawa is N. D. Porter, and the city engineer is F. C. Askwith.

The Mettagami Pulp & Paper Company, which had intended to erect a large pulp and paper mill at Smooth Rock Falls, Ont., have decided to let the plan remain undeveloped until the money markets become more favorable.

The Canada Cement Company, Limited, have been granted supplementary letters patent by the Dominion Government to carry on, among other things, the business of manufacturing and dealing in logs, timber, lumber, pulpwood and the products of the forest generally.

The Upper Ottawa Improvement Company, Limited, has filed plans with the public works department at Ottawa for new works to be constructed during the coming season. Piers and booms will be placed in the river at Culbute, Culbute Chenail, Rocher Fendu and Reid Island, in Chichester, Waltham, Allumette, Calumet, and Clarendon townships in Quebec Province, and at Westmeath, Ross and Horton, Ont.

The Wood Products Company, Limited, have been granted a Dominion charter with capital stock of $100,000 and head office at Toronto. The company is given wide powers, including the destructive distillation of wood, the manufacture of charcoal, wood alcohol, etc., and to carry on business as timber and wood growers, to build and operate pulp and paper mills and to manufacture and sell pulp and paper. Toronto capitalists are behind this enterprise.

The Canadian Western Timber & Fuel Company, Limited, has secured an Ontario charter. The head office of the company is at Fort Frances, Ont., and the provisional directors are P. P. Elliott, and L. Delany, lumbermen, and A. D. George, promoter. The company is authorized, among other things, to carry on business as timber merchants and sawmill proprietors. It will probably take over the various contracts and timber operations of P. P. Elliott. The capital stock of the company is $40,000.

H. Richards, lumber manufacturer, Dacre, Ont., whose mill and yards were recently destroyed by fire reports that he lost 1,175,000 feet of lumber, 750,000 shingles and his sawmill, shingle mill, planing and lath mill. The loss amounted to about $40,000, and he carried no insurance. He has started to rebuild and expects to be operating by the first of May. The new mill will cost about $5,000. It is to be operated by water power. Dacre, Ont., is in Renfrew County, about six miles from Caldwell's Station on the G. T. R., and is served by rural mail delivery at Hyndford, Ont.

Eastern Canada

The General Lumber Company, Limited, has been incorporated with head office at Montreal, P. Q.

The Violette Lumber Company, Ste. Flavie, P. Q., has under construction a mill to manufacture lumber, lath and shingles.

The planing mill and woodworking plant at Riverside, N. B., formerly belonging to Capt. Edmond Kinnie, has been sold to Hall Lea, of Moncton, N. B. Mr. Lea is moving the plant to Moncton.

None of the tenders for the purchase of the estate of Richer & Freres, sash and door manufacturers, of Montreal, has been accepted, all being too low. Fresh tenders will be asked in about a month.

A co-partnership has been formed between F. C. Coburn and E. M. Coburn under the name of F. C. Coburn & Son, to carry on business as manufacturers of lumber. The head office of the company is at Ripples, N. B.

A co-partnership has been formed between Louis Malenfant and Alfred Malenfant under the name of L. & A. Malenfant, to carry on business as manufacturers and dealers in lumber. The head office of the company is at Arsenault Siding, N. B.

The St. Maurice Paper Company, Limited, has been incorporated with head office at Montreal, P. Q., and capital stock of $10,000,000, to carry on business as manufacturers of wood, pulp and paper, etc., in all its branches. Those interested are A. Chase-Casgrain, E. M. McDougall, and P. F. Casgrain, all of Montreal.

J. Lewis & Sons, Limited, Stewiacke, N. S., who were recently incorporated, are taking over the business formerly conducted under the name of J. Lewis & Sons. No changes are being made in the control or objects of the company. They are manufacturers of wood shanks and machine pegwood and have factories at Stewiacke, N. S., Lewiston, N. S., and Brownville, Maine.

The Chicoutimi Pulp Company are applying to the Quebec Legislature

for the right to erect sluices and dams for storing water in Lake Kenogami and the lakes and streams emptying therein, so as to regularize the course of the Chicoutimi and Aux Sables Rivers. They are also applying for the right to sell, under an approved tariff, to persons who will require the same, the water thus accumulated.

Western Canada

The B. C. Timber & Trading Company, Vancouver, has been registered as a partnership, the members being E. Aiekin and R. R. Mackie.

The Comox Logging & Railway Company are operating full crews in their camps and are considering the opening of a new camp at the beginning of February.

The Cantelon and Cameron Lumber Company has been registered as a partnership at Vancouver, B. C. The members are David Cantelon and James M. Cameron.

Murray Brothers, Limited, have been incorporated with head office at Vancouver, B. C., and capital stock of $10,000, to carry on business as general lumbermen, including the buying and selling and manufacturing of lumber.

The Western Canada Lime Company, Limited, has been incorporated with head office at New Westminster, B. C., and capital stock of $100,000, to carry on, among other things, the business of manufacturers of wood in all its branches and to operate sawmill, shingle mill, box factory and barrel factory.

The Thurston Flavelle Lumber Company, Port Moody, B. C., are overhauling their mill. Two new extra boilers, two new slab conveyors, a new "hog" for cutting fuel and a new eight resaw are being installed. Besides these additions 1,000 feet of new piping are being installed in each of the five kilns.

Negotiations are under way for reorganizing the Canadian Puget Sound Lumber Company, Limited, Victoria, B. C. It is hoped that these will lead finally to the reopening of the company's plant at Rock Bay, although such an event is not considered likely until lumber markets have improved considerably and the tonnage scarcity has been relieved.

The Brooks-McVickers' shingle mill located at the head of Bessel's spur near Rand, B. C., will close down permanently about the middle of February. The plant will then be moved to Rosedale above Chilliwack, B. C., and will be enlarged. A logging railroad will be built at Rosedale. The firm has two years cutting in sight. The company will also establish a mill at Newport on the P. G. E., where it holds six timber limits. Mr. Charboneau, one of the members of the firm, reports that the demand for shingles from the Prairie provinces is excellent.

The Iowa Lumber Company, Sapperton, B. C., have leased the plant of the Port Hammond Lumber Company at Hammond, B. C., and will operate it for two years in the manufacture of spruce and cedar lumber and shingles. It is possible that subsequently the lessees may decide to purchase the mill. It is expected that the production will be about 50,000 feet per day. From 40 to 50 men will be employed. The president of the Iowa Lumber Company is Mr. C. J. Leyland, London, England. Other officers are N. R. Whittall, manager; E. Lafontaine, secretary-treasurer, and Frank S. Greene, sales agent.

St. Louis Hoo-Hoo Hold Large Concatenation

An important gathering of Hoo-Hoo was held at St. Louis, Mo., on December 30th, when about ninety members of the Order attended a concatenation and dinner. The Snark of the Universe, Julius Seidel, acted as toast master. A number of presents were made to various members of Hoo-Hoo who attended the dinner, the first and most important being an ink well holding a gallon of ink, and a pen about two feet long, together with a book of records 18 in. x 24 in., which were presented to secretary-treasurer Mr. E. D. Tennant. The meaning of this gift was symbolical, indicating that a new era in Hoo-Hoo had arrived which was to be recorded upon the clean white sheets of the new book of records.

The veteran Ottawa lumberman, Mr. J. R. Booth, has caused the piling, ready for burning at a safe time, of inflammable debris on a narrow strip of his limits parallel to a portion of the Canadian Northern Ontario Railway, east of North Bay. This progressive action in connection with forest fire prevention will materially reduce the fire hazard to valuable timber lands in the vicinity. Similar action by other limit-holders would undoubtedly be a paying investment.

There has lately been a material improvement in lumber shipping facilities from Pacific Northwest ports. The firm of Charles R. McCormick & Co. has completed a vessel with a capacity of 2,000,000 feet to put in the trade between the Pacific coast and European ports. Another vessel of practically the same capacity had been ordered. The vessels will be four-mast and have semi-Deisel auxiliaries.

Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

W. W. Cory,

Deputy Minister.

Department of the Interior, Ottawa,
December 20th, 1912.

When You Overhaul Your Mill

THERE are wet places in every saw and pulp mill where nothing but the highest class belting can "make good". It is for these wet places that we recommend what most mill-men swear by—our

"ACME WATERPROOF" BELT

This belt is especially made for a rough and trying service. It has less stretch than any other belt by 15 to 25 per cent.

When you are overhauling try a Goodhue "Acme Waterproof" belt. Other Goodhue belts are "Extra" and "Standard."

Prices and Particulars on Request.

National Trucks

The production of Motor Trucks by the National Steel Car Co., Limited, is a logical development of the resources of the Company.

More than a year ago the National Steel Car Co., Limited, commenced to use its resources and facilities in the designing and manufacturing of Motor Trucks, its progressive steps being directed by careful study and analysis under laboratory conditions, supplemented by service tests of exceptional severity.

In announcing the National Motor Truck we confidently state that it will give a service that will be one of utmost satisfaction.

WRITE FOR CATALOGUE

It is a matter of the greatest importance to the purchaser that he should know that he can depend upon the guarantee of the manufacturer as well as upon the future service he will receive from the Truck Maker, no matter where the truck may be in use.

Details of the specifications and the service which goes with every National Truck gladly sent upon request. Address enquiries to Hamilton Office.

DRAFT for Burning Shavings

Sturtevant
(REG CAN. PAT. OFF)

Turbo-Undergrate Blowers

are operating successfully in lumber mills and wood-working establishments all over the world.

Their universal adoption is due to mechanical superiorities which enable them to operate without trouble or shut-down and with practically no attention.

The bearings are large and generous—with oil ring lubrication. The reservoir needs filling only once every few weeks. Individual nozzle control makes it possible to turn off any desired number of nozzles when operating at light loads. This gives good economy. These sets have no ball-bearings to rust or crack.

Bulletin 214C will explain

Not altogether what we say but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

We make a Specialty of

Conveyor Chains

For Lumbermen

WE make them from carefully-selected iron, and every link is guaranteed ***strictly hand-made***—not the inferior machine-made.

The point is worthy of special emphasis.

We make the chains according to any dimensions desired, guarantee splendid workmanship; uniformity; dependability.

Prices are the lowest possible for the class of work we furnish, and Quality above criticism.

Let us quote for your needs.

Send for catalogue giving estimated weights of various sizes of chain; prove test; breaking, straining and safe-working loads, and giving hints regarding the care of chain which will prolong a chain's usefulness.

Woodhouse Chain Works

Canadian Made Locomotives

There is no need to go outside of the Canadian market in order to obtain the best logging locomotives. We have been specializing in this line for fifty years. You will find the design of our locomotives complete and the sturdy construction equal to every test of the severe service of logging operations.

Repair parts can always be had on the shortest notice.

This engine is 13½ ins. x 18 ins. and weighs 35 tons.

Grey Iron Castings—any size or shape—ordinary or intricate—made promptly. New foundry, splendidly equipped We would be pleased to quote on castings—singly or by contract. We also make drop forgings of all descriptions.

LOGGING LOCOMOTIVES

The designs of our Logging locomotives are the result of wide experience, extending over a period of 80 years.

The material used in their construction is thoroughly tested and is the best of its kind.

All details are accurately finished to standard gauges and are absolutely interchangeable on all locomotives of the same class and size.

This cuts out long delays at critical times of the work, as parts liable to wear can be kept on hand or shipped promptly from our works.

NOW

Clothing

Shoes

Silk Hose and

Breakfast-food

are among the commercial by-products of wood. About one-fourth of the tree goes into lumber. The values in the remaining three-fourths are not known.

Ten Years from Now

Lumber may be the by-product of our forests. The economic changes in utilization developed by the meat packing industry will be paralleled with wood.

SCIENCE is discovering new values,
ECONOMICS is eliminating waste,
GOOD BUSINESS is solving the problem of utilization.

Stumpage, bought with discrimination, continues safe, stable, profitable. The present offers investment opportunities that may never be repeated.

hauled in by chain or cable and being returned by gravity. This rig can be made in any desired proportions or combination of parts. We have several sizes.

In No. 1 the drum shaft is 2-7/16 in. diameter with iron friction 42 in. x 8 in. and drum 5 in. in diameter, 42 in. between flanges. The driving shaft is 1-15/16 in. diameter with paper friction 8 in. diameter by 8½ in. face. There is an eccentric or rocker bearing provided with this shaft, and a standard pillow or post box for the opposite end where the drive pulley is located.

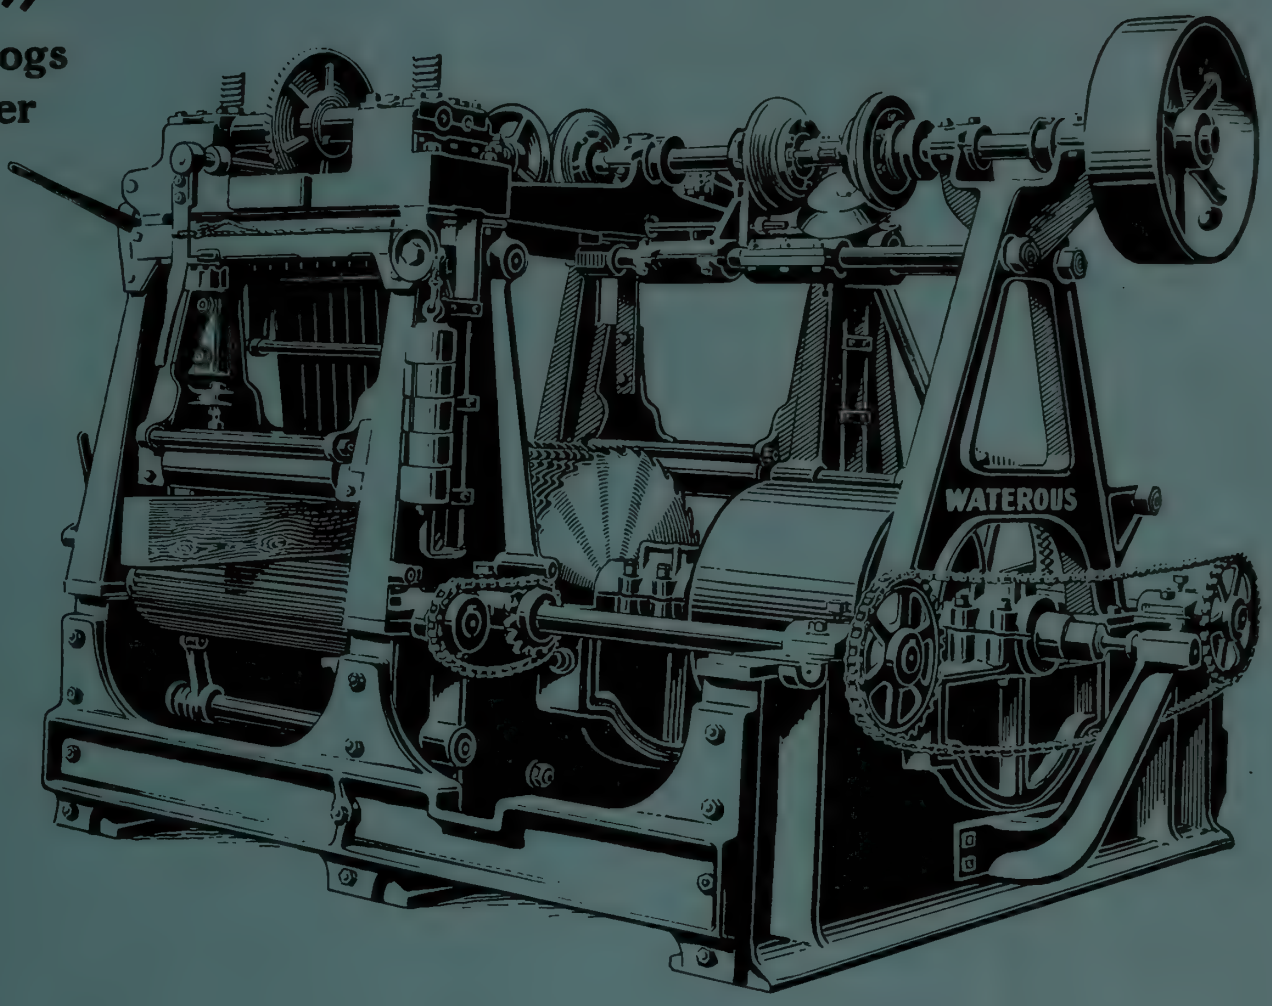
Cut Those Small Logs Into Perfect Lumber Economically—



With The "1916 Model" Kendall Circular Gang

The Kendall Circular Gang meets the demand for a machine to turn small logs into merchantable lumber economically—*profitably*.

Having an enormous capacity as compared to the Band Saw or Circular, this machine, by reducing the time of handling small logs, keeps up mill production and keeps down costs.

The Kendall Circular Gang takes cants from 4 in. to 12 in. thick, and at the rate of 2500 to 3000 a day turns them into lumber, perfect in finish and cut evenly from end to end.

Other Gangs will cut lumber fast, but none of them can equal the Kendall on *quality* of lumber sawn.

The "1916 Model" machine is the latest development in the Kendall patents. New features that mean increase in capacity, increase in cutting quality, greater safety and convenience, have been added.

Let us show you why it will reduce lumber sawing costs for you.

A Letter

"We have sawn as many as 2,500 logs in 10 hours, and if we could keep the Gang running without any stops or delays we could run 3,000 through it in 10 hours. But taking into account delays, changing saws, etc., we can easily saw over 2,000 cants per day. We run five logs per minute, which is about 65 to 75 feet feed per minute. It does not make any difference what sized cant we run, the feed is the same. We run 11-in. cants when our saws are full size and only 10-in. after the saws are worn down too much to take 11-in. cants.

We have been well satisfied with our Circular Gang and would certainly advise any person requiring a machine which puts out a lot of lumber, to install one. This Gang does not only cut up a lot of lumber, but it cuts it even from end to end without any variation in thickness, which no Band Saw will do, neither any Circular Saw."

"FROST KING" METAL

$5,000,000.00
worth of mixed metal sold annually.

Our thirty-five years experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 30c per lb., Fort William and East; West of Fort William 35c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our FAULTLESS BABBITT will stand where all other metals will fail. Price, Fort William and East, 40c per lb.; West of Fort William, 45c, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

FOR SALE: Machinery and Timber

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the town of Parry Sound, Ont.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Special bargains in the townships of Burpee, Falconbridge and Street for small mills.

We have the following Sawmill Machinery for sale:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

All of the above open for inspection at Parry Sound.

To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

ARKANSAS SOFT PINE
TRADE MARK

What You Dealers Have Always Wanted

of course is a lumber which will lift you out of the turmoil of price competition, and place you and your merchandizing methods on a higher level.

You would naturally prefer to be known as the merchant who sells a material of established value, for which you charge a fair and deserved profit, and in consideration of which you deliver value received to the purchaser.

Arkansas Soft Pine

will help you to this position.

WHY?

Because it is a wood of specific superiority for particular uses, and as such is nationally advertised. It is moreover, identified by trade mark which implies that it must adhere to set standards of excellence in quality and manufacture.

The foregoing facts are in the consumer's mind when he comes into your office. Consequently when he (your buyer) asks for Arkansas Soft Pine, he does so because it is the wood he wants. Price is a secondary consideration.

Shall we quote by wire or letter?

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 36 Toronto, February 1, 1916 No. 3

Has Sir Robert Borden Missed His Chance of Being a Great Man?

Do we understand from Sir Robert Borden's attitude in the House that he refuses to hold an investigation into the charges that have been made in connection with the letting of Canadian munition contracts?

If he knows that the charges are false, would one not expect he would jump at the chance of clearing the reputation of his friends? What is the inference if he refuses?

If he persists in sidestepping the issue we believe Sir Robert has missed the chance of a lifetime to show himself a really big man. Will he prove to be what men are saying of him to-day, or will he measure up to the standard of his opportunities?

The Attorney General seeks to draw a herring across the trail in placing responsibility on the British Government. That's not the issue. The Canadian people want to know whether the men holding executive positions have conducted themselves as becomes appointees of a party holding a great public trust, in accord with the honor of citizens of our great Empire and in the best interests of the efficient conduct of our war.

The original Shell Committee undoubtedly deserves credit for the despatch with which they placed orders among manufacturers, who were naturally shy of accepting the responsibilities of big and uncertain capital expenditures. But what conceivable excuse is there for refusing these same manufacturers further orders—even to the extent of turning down an offer to furnish **at cost?**

Before the public press became aware of the existing conditions, rumors of what was transpiring reached this paper, and we felt it was our duty to bring certain matters to the attention of our readers. Under the caption "In the Public Eye" we have touched upon, possibly, no more than ten per cent. of the information that has reached us, much of which at the present time is unprintable. It has been our endeavor to cover only such points as would further the common cause, and interfere as little as possible with our national military operations.

As we expected, even in this we have found the path of the pioneer proverbially unpaved. We have the satisfaction, however, of having started a protest that is now being taken up by the independent press even of the Conservative party, and that is ringing from coast to coast among our citizens of influence and power who love honor and efficiency more than money or party. We have the satisfaction of hundreds of friendly assurances that our course has been right, and believe we are backed by thousands more who have read and silently approve our stand. The final results will prove that our course has been absolutely justified.

And now, let us get along with our share in this big war. We have placed ourselves on record, and for the present will let matters rest there. No matter how badly we are led, Canada is in it to our last man, our last dollar, and to our last shirt.

Government Refuses Shell Committee Investigation

The people of Canada have been given a nasty dose to swallow by the Dominion Government in connection with the course to be followed by the Government regarding the operations of the defunct Shell Committee, which was in fact the Department of Militia and the Minister of Militia. We take it for granted that most of our readers are acquainted with the events that occurred at Ottawa during the debate upon the speech from the Throne. Some people may not have followed the situation closely and we will briefly outline it. So serious were the charges made in regard to irregularities in the work of the Shell Committee which were discussed throughout the whole of Canada before Parliament opened, that the Hon. Wm. Pugsley, of St. John, N. B., discussed them at some length during the debate upon the speech from the Throne and concluded by asking the Government to have the situation investigated by the Canadian Parliament. The Government's attitude in regard to the situation was announced by the Solicitor General, Hon. Arthur Meighen, who sought to reduce the matter to the level of party politics, declaring that the Hon. Dr. Pugsley had made "the most bitterly partisan speech since the war began," and that there was "less foundation in fact for it than for any speech ever made in Parliament." The Solicitor General announced that the Government would not hold an investigation. The reasons he gave were that the Shell Committee was answerable only to the Imperial authorities, that contracts were given to Liberals and Conservatives alike, and that the Liberal Government which was in power at the time of the South African war had then refused an investigation of purchases in Canada for the Imperial Government.

The people of Canada will not support a Government in this stand. If the Government persists in its course it can at best only postpone the day of reckoning. We feel satisfied that Liberal and Conservative members of Parliament alike—if they are animated by the same spirit that animates those other Canadians who have gone to the front—could face this matter out, during an investigation, with a determination to rout out the evils and make the future work of the Government in furnishing munitions a much simpler and quicker business. The present is a time for confidence in one another and co-operation towards the one supreme purpose of winning the war. It is no time for accusing one another of partisanship.

Our own leanings have been strongly towards the party which is at present in power, but we are firmly convinced that they have made a false step in refusing an investigation. It is no use saying that an investigation may be held later on under "proper conditions and at a proper time." The chief object of an investigation is to clear the tracks and make better work possible. By delaying the investigation until the war is over no good will be done in this direction. The only benefit to be secured by the present Government would be the doubtful one of transforming the matter into a purely political one. The honest, fearless, straightforward and reasonable course to adopt is to face the situation boldly to-day, hold the investigation, make it absolutely thorough, and then have done with it. Nothing else will persuade those who have enquired privately into some of the features of the situation, that there has not been much grafting and favoritism.

Nothing else will clear the Government of the suspicion that it is taking shelter under a paltry subterfuge and is waiting purposely until time has mellowed the harshness of some of the charges and has made it possible for them to handle the whole affair on a political basis.

Of the reasons given by the Solicitor General for refusing an investigation, all but one are of a political nature. This one alone concerns the Canada Lumberman and its readers, namely, the assertion that for the speech made by Hon. Dr. Pugsley, there was "less foundation in fact than for any speech ever made in Parliament." If this is the case let the Government cause an investigation to be held. The less foundation there is for the charges the quicker the air will be cleared by an investigation. But there is foundation, and plenty of it, and if the present Government will not order an investigation, it must know, from its acquaintance with Canadian history, that an investigation will be forced upon it and that the consequences will be more disastrous to them the longer it is delayed. We believe that the present Government, by taking a straightforward course, would come out of this ugly situation better than in any other way, and that the whole matter could be cleared up, greatly to the improvement of our ability to assist Great Britain and the allies.

The shell box feature of the situation, though to some extent a minor one, seems to us to demand an investigation on its own face. As the Government wishes the people to believe that less foundation for demanding an investigation exists in this matter than in connection with any investigation ever asked for in the Canadian Parliament, we think it well to repeat the essential points in connection with the cases which we have reported in previous issues of the Canada Lumberman, all of which have to do only with shell box contracts granted by the late Shell Committee.

In our first reference to this subject we complained of firms such as the Deakin Construction Company and the Cedars Construction Company of Montreal securing contracts for the production of shell boxes. Such firms and many others who have received contracts were not equipped for the production of boxes and had either to buy or secure control of woodworking plants. At the same time we received letters from all parts of the country sent us by woodworking firms with modern and extensive idle equipment, who were unable to obtain contracts. Many of these firms told us that in reply to their applications for contracts they could only receive short letters, or none at all, from the Shell Committee, advising them that all contracts had been let. At the same time contracts were being continually given to the favored ones.

A case which we reported in our issue of December 1st was a typical one. A man who was in the specialty business in a western Ontario town, got a contract for 25,000 boxes. He had no plant, he had the shooks manufactured for him by another party. He nailed the shooks together, delivered them to the Shell Committee and claims to have made a profit of $5,000. In the first place this man had wanted a contract for manufacturing a part of the shell. He was turned down at first, but subsequently was given a contract for shell boxes.

In our issue of December 15th we referred to a case at Niagara Falls, Ont. A shipping clerk in the Dominion Suspender and Necktie Company at that place, who had no experience in the woodworking business, secured a contract for the production of shell boxes. He had no plant, but erected a small one, bought some machinery and made the boxes. Subsequently he received another contract for a large quantity of boxes, although other firms in the same town and elsewhere throughout Ontario were being told that, for the time being, there were no new contracts to be given.

In our issue of January 15th we reported a case at Fenelon Falls, Ont., located in the constituency represented by the Minister of Militia. In this case we were informed that C. W. Burgoyne secured a contract for 5,000 shell boxes. Burgoyne is in partnership with his father in a general store business. He made over the contract to Alfred Tiers, of Fenelon Falls, who conducts a planing mill business there. Subsequently a partnership was formed between C. W. Burgoyne and Tiers under the name of C. W. Burgoyne and Company, and this firm secured another contract for 25,000 boxes.

We have not sought to dig up these stories. They have come to us unasked, from lumbermen and woodworkers in many parts of the country. We have not had the time to search for the evidence in more than a few cases, but each case that we have enquired into has been a clear one of a contract being improperly let. There have been no blind trails so far. We have heard of many other cases which we have not followed up, because our time is occupied too fully in other directions. We have little doubt, however, that other cases we have heard of would be shown, by an investigation, to be equally improper.

None of these stories have been contradicted. The Government must know that contradiction is impossible. In the face of this and of many worse charges which have been made regarding the letting of contracts for shells, the Government tells us that there is less foundation for a demand for an investigation than there ever was in connection with any similar demand made in Parliament.

We think we have gone quite far enough in our disclosures regarding shell box contracts to show that **there is ample ground for a thorough investigation.** The Government wants the public to think otherwise, and has made up its mind to stave off the investigation if possible. Our disclosures have been so thorough and definite that it would be futile to try to reinforce them with others. We mean to leave the matter alone for the time being, but so soon as the Government becomes aware of its bounden duty in regard to this matter we will be ready to go into the matter as much further as necessary.

Canadian Firms Likely to Get Portable House Trade

The Canadian Timber Products Association recently received, through the Department of Trade and Commerce, a communication from Mr. Philippe Roy, General Commissioner for Canada, Paris, France, stating that the French Government has authorized him to make enquiries into the possibility of obtaining a large number of shelter houses in Canada, to be used in the devastated portions of France which have been recovered from the enemy. The communication states that if the houses can be turned out at a suitable price the French Government will place an initial order for a very large quantity and that further orders are likely to follow.

Working upon this enquiry the Canadian Timber Products Association has appointed a committee to consult with architects, and already have, in conjunction with Mr. John M. Lyle, who represents the French National Relief Society at Toronto, made very definite progress towards the preparation of plans for a couple of houses of different design. Each of these houses is to contain three rooms, two being bed rooms and one a kitchen and dining room. Mr. Lyle is now completing the plans and as soon as they are in shape, one of the members of the Canadian Timber Products Association will have one sample of each house built. The Canadian Government has promised, through Sir Geo. E. Foster, Minister of Trade and Commerce, that in connection with this business it will guarantee that transportation facilities will be available.

The other propositions previously taken up by the Canadian Timber Products Association, relating to the donation of a number of houses by Canadian lumbermen, woodworkers, and the Government, is for the time being in abeyance. The Ontario woodworking firms represented in the Canadian Timber Products Association have given definite undertakings to do their share in this work and when the other provinces have been heard from the matter is likely to be brought to completion.

French Government Makes Large Enquiry

Montreal, January 24th; (Special to the Canada Lumberman):—The Hudson Bay Company, Montreal, purchasing agents in Canada of the French Government, have sent out enquiries for the following lumber, totalling 71,459,000 feet, together with windows and doors:

2,800,000 ft. B.M. 2 x 6 x 12/16 spruce, Nos. 2 and 3.
4,950,000 ft. B.M. 4 x 4 x 12/16 spruce, Nos. 2 and 3, D4S.
1,320,000 ft. B.M. 4 x 6 x 12/16 spruce, Nos. 2 and 3, D4S.
5,449,000 ft. B.M. 1 x 8 x 10/16 Shiplap.
12,650,000 ft. B.M. 1 x 6 Clapboards.
10,620,000 ft. B.M. 1 x 5 Clapboards.
560,000 ft. B.M. 1 x 8 x 14 D4S.
3,740,000 ft. B.M. 2 x 8 x 14 D2S and 1 Edge.
3,100,000 ft. B.M. 2 x 8 x 12/16 D2S and 1 Edge.
7,550,000 ft. B.M. 2 x 5 to 8 in. D1S T. and G.
6,480,000 ft. B.M. Furrins 1 x 1 x 12 D4S.
12,240,000 ft. B.M. 1/4 Round 7/8 x 7/8.
40,000 Windows, 3 ft. x 4 ft. 9 in. Sash frame and casing complete, 6 lights.
20,000 Doors, 3 ft. 9 in. x 7 ft. all complete, frame and casing.

The lumber is to be spruce, hemlock or red pine.

Lumber Trade Conditions During 1915

A Year Dominated By the War—Sluggish at the Outset—Lively at the End —Tonnage Problem Unsolved

The history of the year 1915 so far as the lumber trade of Canada is concerned was dominated and controlled almost entirely by the war situation. At the beginning of the year, trade was very slow. The country had scarcely been able to get its bearings, from a commercial and industrial point of view, during the five months which had elapsed since the opening of the war. Lumber producers were in a quandry regarding their woods operations. Banks had discouraged extensive cutting of timber and numbers of the smaller operators were thus kept out of the ranks of the producers. Firms that were in a position to finance their own operations, however, in many cases foresaw that before many months the war would create an abnormal demand for all kinds of timber and for a great many products of wood. They therefore, in many cases, went into the woods on a fairly extensive scale. They were of course justified by events later in the year.

Confidence Revived

For the first few months of the year lumber trade conditions were unquestionably slow. Shortly after the opening of spring, however, there appeared to be a revival of confidence which spread throughout Canada. The improvement was due almost entirely to the great quantity of money coming into Canada in payment for munitions of war and military supplies required by the Allied Governments. This condition continued until the fall and by that time the amount of money put into circulation throughout Canada had created a much better industrial situation. With the arrival of fall there was added to the improvement caused by war orders a greatly increased feeling of confidence resulting from the abnormal crops which were then assured to Canada.

In the beginning of the year, prices of lumber and timber were very low and they continued so for some months. The improvement which commenced in the spring was gradual and slight until the middle of the fall. Then there came a great wave of optimism flowing out of the conditions above referred to and prices commenced to rise rapidly. Those lines of lumber which were in special demand for military purposes, and especially the lines used for the production of shell boxes led in the advance. Chief among these were spruce and hardwoods, particularly birch. These lines became so scarce on account of the shell box consumption that substitution of other lines became necessary and the price improvement then became more general.

Throughout the year the market for pine has been quiet. Today there is a feeling that pine prices will improve. This is expected as a result of the removal of the competition of yellow pine. Yellow pine at the beginning of the year, was, like every other line of lumber experiencing a very quiet market. On account of the large producing capacity of the south and the comparatively short ocean voyage between the southern shipping ports and Great Britain and France the allies turned first of all to that source of supply and flooded it in the late summer and early fall with such abnormal orders that the price of yellow pine commenced to soar. Prices, however, were not being considered by the allies. What they wanted was material and when they found the production of the south was not sufficient for their imperative wants they went to the markets of the Pacific Coast. They are today purchasing enormous quantities on that coast, and trade in the United States has therefore felt the stimulus of the war demand from east to west.

Spruce Benefiting from Export Demand

In Eastern Canada, following upon the rise in the price of yellow pine, it is expected that white pine may soon be in fair demand. So far as eastern Canada is concerned, however, the export business during the past year has been to a very great extent confined to spruce and birch. Spruce, being a cheaper wood than pine and nearer the ports of shipment has been purchased in great quantities. The difficulty in securing supplies of timber and lumber from the customary sources in Europe has also been a strong factor in directing the demand towards spruce from Eastern Canada. In connection with the export situation one of the most important features during the past year has been the great scarcity of tonnage. If it had been possible to secure sufficient tonnage there is no doubt that every stick of suitable spruce in Eastern Canada would have been shipped to Great Britain and Europe during 1915. As it is, by one means or another the shipments have been heavy, showing a considerable increase over 1914.

An interesting factor in this situation has been the reappearance of sailing vessels in the Trans-Atlantic trade. Many years ago these vessels were forced out of the trans-Atlantic business by steam vessels and they had been confined to the coasting trade. When so many steam vessels were commandeered by the Government for military transport purposes, the sailing vessels again took a hand in the trans-Atlantic trade and they have been the means of relieving the situation to a very great extent. At present, the outlook in connection with ocean tonnage is absolutely dark. The probabilities are that we shall have to struggle along throughout 1916 as we have durng 1915 and that relief can only be expected with the end of the war. A few indications of an encouraging nature have appeared such as a report that the British Government has given the ship building companies permission to take on work in the construction of merchant vessels. To how great an extent this will be done, however, and how soon it can bring about any relief are matters of very great uncertainty.

In connection with the British Columbia export trade a very encouraging feature has recently been developed with the assistance of the British Columbia government. A plan is now being worked out for the construction of a considerable number of four-masted schooners with auxiliary Deisel engine equipment, having a capacity of from two to three million feet of lumber each. We understand that the initial intention is to construct about 30 of these vessels, and more at a later date as conditions warrant. These would assist British Columbia greatly in the marketing of her export stocks, and would enable the coast mills to devote their attention almost exclusively to the export trade, thus removing their competition from the prairie province trade and leaving it more completely in the hands of the mountain mills.

Effect of Panama Canal Blockade

In this connection it is important to note the situation regarding the Panama canal. This important connection between the Pacific and the Atlantic has been blocked for some months by land slides and up to date we have no definite assurance as to how soon it will again be opened for traffic. This has been a great blow to the B. C. lumber export trade. Large orders for export to Great Britain were received and others were expected. These have been delayed and it is questionable whether they can now be carried out. Only with the final opening of the canal will B. C. be able to compete successfully in the markets of Great Britain and Europe, and also in the markets of the Eastern States. During the short time the Panama Canal was open to traffic British Columbia had made remarkable advance in establishing its products in the markets of the Eastern States. It is certain that the renewal of traffic by this route will make British Columbia lumber and timber one of the most important factors in the eastern markets.

In the local markets throughout Canada, the year 1915 was a quiet one, with a fair amount of improvement during the last few months in the eastern parts of Canada and greater improvement in the west. The local trade situation in Eastern Canada, however, is not encouraging. Building operations almost ceased during 1915, particularly in the large cities. In the country districts a fair amount of building followed the harvesting of the large crops. The beneficial effect of the big crops was felt to the greatest extent in the prairies and British Columbia. Prairie farmers had been struggling along for several years without improving their buildings or adding to their equipment for the production of stock and implements. 1915 crops were so great that the farmers found themselves obliged to do a large amount of building. The railroad companies were not able to remove more than a small percentage of the crop before weather conditions made it necessary to give the balance protection. This situation was foreseen at an early date. Many granaries were constructed and barns and implement sheds were put up, all being constructed almost entirely of lumber. Moreover, the farmers, as soon as they commenced to receive returns for their grain began to improve their dwellings or to build new ones. The prairie farmers have lived, to a great extent, during the past in a class of buildings notable more for giving shelter and sleeping accomodation than for comforts or luxuries. They are now, in many cases, putting up buildings of quite an expensive class and the indications are that during 1916 the demand from the prairies will continue good. Throughout Western Canada, in fact, the result of 1915 trade is most encouraging and the people of western Canada are all optimistic regarding the outlook for 1916.

Ontario Production Decreased in 1915

A Drop of Over 74,000,000 Feet as Compared with 1914—Lath Output Slightly Greater—Shingle Production Smaller

The production of lumber in the Georgian Bay and Northern Ontario districts during 1915 showed a decrease of 74,885,663 feet b. m. as compared with the production during 1914. The total production for 1915, as shown by reports to the Canada Lumberman, amounted to 725,526,840 feet. The 1914 production shown by the same reports amounted to 800,412,503 feet b. m. This decrease was due in a large measure to the fact that when operators were going into the woods in the fall of 1914 the war situation was such that nearly everyone was in the dark regarding the trade outlook for 1915. Moreover the banks were discouraging operations and those who operated on a large scale were ones who were able to finance their undertakings extensively by themselves.

The production of lath in Ontario according to the same reports amounted during 1915 to 252,154,530 pieces as compared with 246,877,250 pieces during 1914. The shingle production was 41,233,750 pieces during 1915 as compared with 43,993,570 pieces duirng 1914.

Further Improvement Expected

Editor Canada Lumberman:— Owen Sound, Ont., January 7th.

Trade generally is in better condition than twelve months ago and we look for still further improvement during 1916, increased shipments of lumber to the United States being one of the main features.—John Harrison & Sons Co., Limited.

Ottawa Valley Lumber Production

Output of Lumber, Lath and Shingles all Show Increases—1915 Trade Better than 1914 — Outlook Good

Ottawa, January 22nd, (Special to the Canada Lumberman):—Notwithstanding conditions which, throughout the year, have not been any too favorable, the lumber cut in the Ottawa Valley in 1915 exceeded by more than seventeen million feet the total cut for 1914. Although several firms have not operated their mills, the majority have done remarkably well. The total output in the Ottawa Valley for 1915 was 476,230,108 feet, as compared with 455,615,783 feet in 1914. The lath and shingle production has also been surprisingly large in comparison with last year and the season before. The lath output in 1915 was 81,490,300 pieces; in 1914, 73,833,400; and in 1913, 70,597,075, whilst in 1915 the shingle production amounted to 43,618,000 pieces, against 34,550,000 pieces in 1914.

Lumbermen generally are quite satisfied with their cut. At the beginning of last year the prospects for a large production were, to say the least, very poor. The season opened up with an exceedingly poor market, both in the domestic and export trade. Dull business continued for at least the first six months of the year, after which time the outlook commenced to appear brighter. Orders began to come in, keeping the trade much busier, and there was a marked improvement, until December last, at which time a falling off in trade is always expected until the middle of the first month in the new year.

In comparing the trade of 1914 with that of 1915, lumbermen here have no hesitation in declaring that on the whole the last year has been much better. Prices throughout the year remained very steady, the dealers preferring to retain their stock rather than dispose of it at reductions, so often asked for. There was a strong movement in spruce and birch, to a great extent due to the demands of the government for shell boxes, and many large orders for these lines were filled for points in the United States. There has been a great decrease in business with England, and exporting to other parts of Europe, owing to the scarcity of tonnage, and possibly, but only incidently to the heavy insurance rates prevailing.

There is no optimism lacking in the expressed opinions of the leading lumbermen in the Ottawa Valley, over the trade outlook for the coming year. They are quite confident that business will be better than even last year, or since the commencement of the war. Should the war terminate by any chance in 1916, it is predicted there would be an abnormal business for lumber trade with Great Britain and her allies. However, if this is not to be the case, it would seem that nothing can be done towards improving the shipping facilities, and foreign exports will continue to be carried on on a small scale. Even larger orders, however, than have been received here during the last year, will be placed in Canada during 1916 from the United States.

As is indicated by the list attached, the lumbermen in the vicinity of Ottawa have done remarkably well. Although only 37,000,000 feet of lumber was cut in 1914 by the J. R. Booth plant, the same firm during 1915 produced 80,000,000 feet. McLachlin Brothers, Arnprior, did not do so well as in 1914, and the only other firms who did not cut as much as a year ago, were those of Gilmour and Hughson, Hull; Gillies Brothers, of Braeside, and the Dennis Canadian Company, Whitney, Ont. The other firms at least reached their last year's output, or exceeded it. The log output will be greater this winter by forty per cent., declare some manufacturers, and possibly greater, providing the weather is good for drawing.

Ontario Timber Production on Crown Lands During 1915 and 1914

Statistics of timber production on Crown Lands in Ontario, and of the revenue, etc., during 1915 and 1914 are as follows:—

Pine sawlogs, square timber, etc

	1915	1914	—Decrease +Increase
Pine sawlogs, sq. timber, etc.	407,874,044 ft. b.m.	382,582,027 ft. b.m.	+ 25,292,017 ft. b.m.
Sawlogs, etc.. other than pine	59,308,403 ft. b.m.	77.451,857 ft. b.m.	— 18,143,454 ft. b.m.
Pulpwood	301,061 cords	104,544 cords	+ 196,517 cords
Ties	729,164	5,439,845	— 4.710,681
Area under license	15,712 sq. mls.	17,333 sq. mls.	— 1,621 sq.mls
Revenue	$1,629,640.60	$2,009,122.43	— $379,481.83

Ottawa Exports to the United States

The following table shows the quantity and value of lumber exported from Ottawa to the United States during 1915, with comparisons for the calendar year 1914, as furnished by the United States Consul General's office:

	1915		1914	
	Quantity	Value	Quantity	Value
Rough lumber	73,463,359	$1,824,718	77,062,595	$1,650,544
Dressed	9,734,874	224,113	5,402,527	137,371
Dressed (T and G)	42,303	858	759,202	19,054
Lath	35,780¼	125,073	21,041¼	79,727
Pickets	6,349½	34,907	3,902½	29,184
Shingles	7,393	24,688	8,344	30,348
		$2,234,357		$1,946,228

Ontario Review in Tabloid Form

Trade Conditions as seen by a Toronto Wholesaler

When comparison is made with the conditions prevailing a year ago there is good reason for hopefulness regarding the future.

A year ago manufacturers and wholesalers were carrying all of the 1914 purchases and part of their 1913 stock also.

Few dealers, if any, were doing enough business to cover expenses and it is safe to say that the majority were losing money both through loss of business and loss of profit.

The building trade in the cities has been almost dormant during 1915.

The statement of permits issued by the Toronto City architect's office shows a tremendous falling off, when compared with previous years, and it must be remembered also that many permits are taken out for proposed erections that may be held over for months, or may not be proceeded with at all. In the towns and villages there was some building in the spring of 1915, but the fall trade was, speaking generally, a disappointment.

The demand for special sizes and kinds of lumber for shell boxes gave a stimulus to business during the autumn months, and some lines of white pine and spruce have been pretty well taken out of the market.

The box factories have been fairly busy and were able to stock up for their requirements at comparatively low prices.

The contractors for shell boxes have now completed their orders and some complaints are being made that deliveries are being held up because shell contractors are behind with their work.

No new contracts have been allotted as yet, although tenders were called for and have been in the hands of the Imperial Muntions Board for some time.

Stocks of hemlock and spruce are lighter than usual in spite of the limited demand, and any approximation to normal trade conditions would no doubt bring an advance in price. But at present the trade is inactive, and all that can be said is that sellers are not disposed to make concessions for the sake of forcing business.

The yellow pine manufacturers have advanced prices on all grades, and this has shut off the importation of this lumber into Ontario.

U. S. hemlock manufacturers have also advanced prices and no hemlock is now being imported.

The war tax of 7½ per cent. has also tended to restrict the importation of hemlock and yellow pine.

The supply of eastern spruce, which used to reach Ontario, has been largely cut off by the export trade with the United Kingdom.

White pine stocks are not heavy and some large sales have been made from Georgian Bay and North Shore points to the United States.

It is reported that the stocks being taken out in Ontario east of Lake Superior will be lighter than usual.

As to the future there does not seem to be much warrant for expecting any marked activity in Ontario trade, but the prospects for improvement in the Eastern States are good, and it is to this market we must look for business during the coming year.

There is a decided improvement in the way of inquiries, from the U. S. and as the yards and factories have been going short of stock, it is reasonable to expect larger demand and better prices during the coming year.

Expect Continued Activity During 1916

Editor Canada Lumberman:— Pembroke, Ont., January 8th.

We are pleased to report a vigorous trade enlivenment during the past fall with a plentiful supply of shipping orders on hand at the present time. As compared with previous years, conditions prevailing now are abnormal on account of the demand for suitable lumber for carriers for munitions of every description. We think the present situation will continue during the coming season, and anticipate an increase in the price of all grades of lumber with the possible exception of "good."

The demand for lumber for box making from the United States is unprecedented.—The Pembroke Lumber Co.

* * *

North Shore Stocks Bringing Higher Prices

Editor Canada Lumberman:— Bay City. Mich., Jan. 7th.

Stocks to be cut next season in the upper Georgian Bay district are pretty well sold up already at a strong advance over 1915 prices. No. 1 and No. 2 mill culls and Norway are especially strong and inquiries for the same are numerous. The bulk of the stock sold for cargo shipments, is to the United States wholesale yard dealers and box manufacturers.

As to the trade conditions in the Saginaw Valley, there is a much better outlook for business this year than there has been for some time. All lines of lumber are stronger and in a great many grades and sizes the demand exceeds the supply of dry stock. We expect a big demand in all grades of pattern lumber and in narrow widths of common. Maple flooring has had a strong advance and hemlock is also in good demand and much stronger in prices.

With the present outlook we think there will be a shortage in most kinds of lumber this coming season. This is especially true for the first six months of 1916 or until such times as the new cut of 1916 is available for shipment.—Estate of E. B. Foss.

Looking for Improvement

Editor The Canada Lumberman:— Marmora, Ont., January 20th.

Stocks in this vicinity are much smaller than they were a year ago. So far as we know, logging operations hereabouts will be very small. As the general lumber trade during last year could not be much worse, we are hoping for an improvement, due to the record crops of 1915, and the very marked decline in logging operations and manufacture of lumber. The reported improvement in lumber circles in the U. S. will doubtless tend to help the lumber trade in this country, and in the opinion of the writer the timber supply of this country is very much smaller than is generally believed. When the public realizes this, stumpage should be considerably enhanced. For this reason it has been our policy for years past to conserve our limits as far as possible. The great trouble is to prevent fire losses. Prevention methods are still far from adequate, especially in the protection of abandoned licenses, which should be much more carefully looked after by the Ontario Forests Department. It is well-nigh useless trying to protect our own limits when contiguous territory is unprotected by the Government.

We have read your various articles regarding the shell box business, and it appears to us that there has been considerable grounds for complaint.—The Pearce Co'y Ltd.

Gradual Improvement Expected

Editor Canada Lumberman:— Ottawa, January 11th.

At the present time there is very little domestic demand and stocks are generally heavy. The prices of spruce and low grades of Norway and white pine are fairly firm. We look for a gradual improvement from now on until the end of the war.

In regard to the shipping situation, we find the railroads well able to take care of any business that we can supply them.

The export situation from a tonnage standpoint could not possibly be worse. We have been in the market for space, for whole and part cargoes, for some months offering enormous figures for the space, even under present conditions, and have not yet had a counter offer during this period. We look for the export situation to get worse and ocean rates to advance gradually and steadily beyond even what they are today. At the present time one might say that there is no market in connection with tonnage as compared with ordinary times. Recently $45 per thousand on lumber has been paid from the Gulf, $37.50 to the Plate and even 200 shillings on sailers to the U. K. and Atlantic French ports.—Bartram Brothers Limited.

Ontario Situation Greatly Improved

Editor Canada Lumberman:— Toronto, January 12th.

The year 1916, in respect to the manufacturing and merchandizing of Ontario timber products, starts off in a very encouraging fashion.

The process of liquidation and adjustments, which has been a feature of 1915, has had its effect in a marked depletion of stocks in the hands of consumers and retailers, so that normal uses are bringing forth an increased amount of inquiry and purchase.

The marked improvement in business in the United States is bringing purchasers from that side who have not been in this market for several years, and stocks that for the last few years have been consumed largely in our domestic trade, are now being taken across the border.

At mill points stocks are not large, and very little remains of 1915 product still in the hands of the producers. Practically everything is now in second or third hands.

We look for a large volume of trade for this year, at firm and advancing prices.—Ontario Manufacturer.

Mr. Arthur Graham, manager of the Lower Ottawa Forest Protective Association reports that during 1915 there was a reduction of 38 per cent. in the amount of green timber damaged by fire in his jurisdiction which is a strip of territory 200 miles long by 75 miles wide at its widest part and embracing 8,500,000 acres. The cost of fire fighting during the year showed a reduction of 33 per cent. There are 58 forest rangers in the territory under four inspectors. Lookout towers have been established at important points which are connected by telephone with the inspectors' offices and with Mr. Graham's office in Ottawa.

During the season of 1915 shipments of lumber through the American and Canadian canals at Sault Ste Marie amounted to 456,451,000 feet, an increase of 4,303,000 feet as compared with the season of 1914.

Montreal Trade Improved Materially

Exports Increased Over 35,000,000 Feet—Shell Box Business Created Good Demand for Stocks—Outlook Promising—Ocean Tonnage Still Scarce

Montreal, Jan. 25.—(Special to The Canada Lumberman):—The position of the Montreal lumber trade during the past year may be summed up in a few sentences: Poor local business, except for shell box lumber, a famine in dry descriptions of the latter, a fairly good demand from the United States, and a substantial increase in shipments to the United Kingdom. Taking the situation as a whole, there was a distinct improvement on 1914. The opening months were by no means satisfactory, but towards the end of the year there was a partial revival. As in the previous year, the country districts were not affected in the same degree as the city, as there was a fair amount of building, chiefly, however, of churches and schools.

The heavy demand for lumber for shell boxes was the redeeming feature of the year. The stringency of the Government requirements involved the consumption of large quantities of 9 in. and 10 in. dry stock, and this became so scarce that the Shell Committee were forced to amend the specifications, allowing the sides and tops to be made in two or three pieces. Even with this alteration, it became exceedingly difficult to secure the requisite dry stock, particularly of birch. Inquiries for lumber came from all parts of Ontario and Quebec, and representatives of United States firms making shell boxes for allied Governments visited Montreal with the object of buying box lumber. Some of this came from New Brunswick. The natural result of this demand was a strong advance in prices of such lumber as was suitable. Montreal has several factories, including some hitherto devoted chiefly to furniture and pianos, turning out shell boxes, and many woodworking firms, such as those making sash and doors and boxes, complained that it was impossible to get orders from the Shell Committee while others with no connection with the lumber or woodworking industries were able to secure very substantial contracts. For a time there was great pressure to produce boxes as fast as possible, involving night and day shifts, but lately production was ahead of deliveries, and some of the factories were closed for a short period.

Business with the United States was satisfactory, and one large manufacturer substantially increased the quota of spruce sent to New York. The advance in the price of southern pine helped the spruce market, as it not only prevented the dumping of low grades in Canada, but tended to promote buying, by United States firms, of Canadian spruce in preference to southern pine. The closing of the Panama Canal by heavy earth slides was another cause of the advance in values, by restricting the shipments of comparatively low priced Pacific Coast fir to the eastern markets.

There was only a small business in hard woods, the poor building trade affecting this branch of the lumber industry.

How Local Trade Was Affected

In the absence of important building schemes and with only a limited number of new houses and apartments, local business was quiet, with a slight improvement at the end of the year. The building permits tell the tale of the slump in the contracting field—$8,511,221 as against $17,394,244 in the preceding twelve months, and $27,037,297 in 1913. Fortunately the shell box orders counterbalanced this condition to a certain extent. Wholesalers state that retail yards are practically bare of stock, owing to the fact that merchants drew principally on the stocks which were in hand at the commencement of the year. In consequence buying was, almost throughout 1915, of a hand to mouth character, retailers naturally selling the lumber in stock before ordering further supplies. It looks therefore as if retailers will soon have to order on a fairly good scale, although it is not to be expeeted that building will be any better than in the past year—unless war conditions undergo a radical change.

There were two or three rather important failures during 1915, but collections were better than in 1914.

Woodworking Industries Dull

If exception be made of those with shell box orders, firms engaged in the manufacture of sash and doors, boxes, piano and furniture were not over-burdened with orders. The first class named is mainly dependent upon construction, and as 1915 was a lean year in this regard, it suffered accordingly. A few orders came in from the Province of Quebec, where building was comparatively active, owing to the results obtained from good harvests and remunerative prices, while some contracts left over from 1914 enabled two or three firms to keep their employees busy during the early part of the year. With general trade picking up towards the end of 1915 box makers' business slightly revived, and this is also true of the piano trade. Furniture makers, who specialise in high-class, production, found orders very difficult to secure, as people restricted their expenditures, as a rule, to cheaper articles. It will be noted that there was, in woodworking industries, a distinct tendency to improvement in the fall, and from the early indications of the present year, it looks as if 1916 will prove more satisfactory than the period which has just closed.

Brighter Outlook for Timber

During the greater part of the year the timber department was slow. Important works, like harbors, dams, and railroad construction were comparatively few, owing to the disinclination of the Governments, various companies, and financiers to expend large sums of money under the conditions prevailing. Towards the end of the year, however, there was an improvement, and some fairly good orders were placed. A more confident feeling then commenced to prevail. Mr. P. D. Gordon, of Messrs. Mason, Gordon and Company, Montreal, is of opinion that the worst phase of the slump is over and that we can look forward to a much better period during the current year. The large amount of money which is being poured into the country in payment for war contracts must have a beneficial effect upon Canadian industry, in which nearly all sections will participate, and indeed the effects of this outlay are already being felt. While the orders for timber are not so extensive, in the matter of amount, as they formerly were, it is satisfactory to know that they are increasing in volume. In the west, the position has brightened considerably; the demand for lumber has expanded, and prices have advanced from the very low level which followed the collapse on the coast. The orders for car stock constitute an important factor in this improvement. It is probable that the local demand for lumber for building will not be very good, but it will be more than compensated for by the business which will undoubtedly be placed for industrial and railway purposes.

Exports to United Kingdom Increase

Two features characterized the export section—an enormous rise in freight rates and a large increase in the lumber shipped. The year 1914 was a difficult one for shippers, but 1915 was an even more trying period, owing to the high freights, uncertainty of cargo space and general delays. The following gives the details of the shipments:—

	1915 Ft. B.M.	1914 Ft. B.M.	1913 Ft. B.M.
Watson & Todd Ltd.	23,445,439	26,165,790	34,596,642
E. M. Nicholson	15,239,280	5,284,731	7,695,305
Bennett Lumber Co.	11,000,000	.....	.....
W. & J. Sharples	9,847,219	6,196,006	13,571,128
R. Cox & Co.	8,852,632	11,336,151	18,326,191
J. Burstall & Co.	7,762,353	6,708,937	8,905,256
E. H. Lemay	7,000,000	3,339,582	3,522,941
Cox Long & Co.	5,130,576	474,818	1,878,741
Dobell, Beckett & Co.	4,446,160	2,677,768	3,527,783
Railway, Steamship Lines and small shippers	13,791,365	9,117,618	13,795,180
Total	106,515,024	71,401,401	105,819,167
	71,401,401		
Increase over 1914	35,113,623		

The season commenced in very slow fashion, and it looked as if there would be a decline from the poor total of 1914. Space was limited, and in addition there was at first a certain amount of perplexity as to the course of British markets. As the available tonnage became greater owing to the Government releasing transports for war work, thus relieving the liners, shipments of lumber gradually increased, and in July and August very large quantities of lumber were sent to the United Kingdom. In the fall, there was a rush to export food stuffs and commodities required by the Government, and in consequence there was little or no room for lumber on the regular liners, which, in normal times, carry the great bulk of lumber. The season therefore closed at an unusually early date. Throughout the year exporters were never sure as to the space available, for the Government had the first claim on the vessels, and a firm would sometimes find that, at the last moment, the space arranged for was commandeered by the Government. This meant expense for demurrage and also additional trouble. The utilization of a number of lake boats and the chartering of a few tramp steamers helped the situation, but it is certain that the total exports would have considerably increased had more vessels used the St. Lawrence route.

The freight situation was an unpleasant surprise to a number of

the old established firms. They had no idea that prices would take such an abnormal rise, going from about 100s. standard at the beginning of the season to 200s. in the fall, the highest known at the port for many years. There was a slight check to the advance when grain shipments fell off, but this was not for long. The Bennett Lumber Company, a new comer in this branch of the trade, was fortunate enough to book a large amount of space at the smaller rates ruling in the first part of the season, and of course reaped the benefit of their policy.

The advance of 35,113,623 feet brings the total up to just over the 1913 level. It is shared in by all the firms with two exceptions, and is due to the increased demand for spruce and birch, much of this for Government account, and for shell box making. The call for spruce was especially good, while the gain in birch may be judged by the fact that Mr. E. M. Nicholson, who specializes in this wood, has increased his exports nearly three fold, and now takes rank as the second largest shipper of lumber from the port. The whole of the firm's increase was not in birch, spruce forming a factor in the larger shipments. The demand for hardwoods, other than birch, was very satisfactory. The pine market was the disappointing feature, the exports of Messrs. Watson & Todd, Limited, the chief exporters of this class of lumber and the largest shippers of the port, falling off by nearly two and three quarter million feet. The amount of lumber, especially spruce, cut for the British market last season was unusually large, some manufacturers laying themselves out for this branch and reducing their production for domestic and United States requirements.

The outlook for next session is the merest guesswork. The duration of the war is the great factor, it will determine the extent of the demand and also the course of freight rates. Should the conflict continue one must not look for lower rates, and the probability is that the demand for spruce and birch will be as great as ever.

Pulp and Paper Business Below Normal

The past year was below normal so far as the pulp and paper business were concerned. Some of the mills did exceptionally well, but others did not come up to expectations. The closing months generally showed an improvement over the earlier period, and the current year promises to be excellent, notwithstanding that the prices of most raw materials have risen considerably; this is notably so in the case of sulphur, bleaching powder, alum, caustic soda, china clay, fillers and coloring matters.

Ground wood was a slow market. Canadian mills are dependent for the sale of a large amount of their product upon United States customers, and if the mills over the border have sufficient high water to grind their own wood the demand for Canadian ground wood is naturally affected. The United States mills grind a surplus during periods of high water to provide against low water periods. Years in which the water is below normal involve a scarcity of pulp, with the necessity of buying largely in Canada. Years in which the water is normal involve a diminution of purchases on this side. Last year the conditions were favorable in the United States. Stocks there, however, are being gradually depleted, and it is likely that the market here will advance until the spring. Canadian stocks on hand showed a considerable diminution during the last two months of the year.

For the first eight months sulphite was very dull, owing to the fact that Canadian and United States book and writing paper mills were running only 70 per cent. of full capacity. An exception was the newsprint mills, which generally ran fully all the year round. The small production of paper naturally restricted the orders for sulphite. In the fall there was a pronounced revival in the demand, owing to the better conditions in the paper trade, and also to the lessened importations of European sulphite to the United States. The latter resulted in a more active requirement from the United States, prices advancing very considerably. One cause of the shortage in European pulp was, it is said, that Germany used sulphite fibre for ammunition purposes in place of cotton, the supplies of which have been cut off. Germany has purchased enormous quantities of sulphite from Sweden, and has entered into contracts for a very large amount to be delivered during the current year, paying very stiff prices for the pulp fibre. The diversion of the product to Germany is a most important factor in the situation, and until the war ends there is no likelihood of the position being altered. Germany is now an importer instead of an exporter. The costs of lumber, coal, labor, sulphur, etc., have also gone up in Norway and Sweden, and this, together with the scarcity of pulp and the difficulty in getting ships, has resulted in the advanced prices. As an illustration of the higher values, it may be noted that bleached sulphite in England is worth about £21, as against £10 three years ago. A considerable quantity of Canadian unbleached sulphite which would have gone to the United States in normal times found a market in Great Britain and France during the past year. Ordinarily, the United States is the best market for our pulp.

Canada seems to have nearly reached the limit, for the present, in the matter of new pulp and paper mills. We have been adding to our plants at a pretty good rate, and it would appear as if there is not likely to be any important additions for some time to come. Some of the enterprises have proved excellent propositions, but in others the introduction of an abundance of watered capital has proved a great handicap to the companies. In 1915 the St. Lawrence Pulp and Lumber Corporation, Chandler, P. Q., commenced to manufacture unbleached sulphite, the capacity being 100 tons per day; while the Bathurst Lumber Company, Bathurst, N. B., came on the market with 50 tons per day of the same class of pulp. During the month of February this company will bleach its sulphite. The Riordon Pulp and Paper Company intend, at their Merriton, Ont., plant, to instal machinery for an electrolytic bleaching system in order to convert their unbleached sulphite into bleached sulphite. The plant will, it is expected, be ready on June 1st next. The Union Bag and Paper Company announce that sulphite, kraft, and newsprint mills will be erected at Cap Madeleine, P. Q., by the St. Maurice Paper Company, a concern controlled by the Union Bag Company, which has already a ground wood mill in the same district. It is reported that the International Paper Company intend to erect a newsprint mill in Canada. The Belgo-Canadian Company, Shawinigan Falls, P. Q., has lately installed one of the largest newsprint machines in the world, having earlier started a sulphite plant with 25 tons per day capacity. The Abitibi Power and Paper Company put in operation during the summer a 200 ton newsprint mill, and it is reported that the Donnacona Paper Company, Donnacona, P. Q., will instal a second newsprint machine during the year.

The Canadian Pulp and Paper Association, Montreal, has continued its operations, one of its most useful features being the technical meetings at which questions affecting the manufacture of pulp and paper are discussed.

Quebec's Annual Report Upon Forests

The annual report of the Hon. Jules Allard, Minister of Lands and Forests for the Province of Quebec, was laid on the table of the Legislature on January 18th. Mr. W. C. J. Hall, superintendent of the forest protection department, in his report states that he has made a study of aeroplanes from the point of view of his department, and has come to the conclusion that they would be of great benefit to locate fires, and enable them to be localized. However, he found that the cost at present would be prohibitive, but later when the cost of the machines dropped they could be used serviceably by the Government for forest protection. Mr. Hall also refers to the importance of protecting the birds which destroy moths and other insects that attack the forests of the country. He incidentally mentions that in the United States the annual loss caused to the woods by the different kinds of insects represents nearly one billion dollars.

On June 30 last there were 7,156,207 acres of public lands divided in the province. This shows an increase of 286,621 acres over the figures for the previous year. Of the total, no less than 214,443 acres have been sold for agricultural and industrial purposes, and the receipts for these sales have risen to $72,222.93.

The woods and forests provided a revenue of $1,736,605.62, made up as follows: Ground rents, $359,834; rights for cutting timber on limits, $1,288,708.83; penalties for infraction of regulations, $16,436.09; accrued interest $27,280.85; premiums on transfer, $10,002; premium on cutting of wood rentals, $34,343.85.

The receipts of the department have risen to $1,840,346.45, and Mr. Allard states that for many years the receipts have been growing, and he is happy to remark that the figures this year are higher than at any time since confederation. He considers the figures satisfactory, showing as they do the progress that is being made in colonization in the province.

Quebec Trade Conditions During 1914

The Montreal manager of the Canadian Bank of Commerce in his annual review of business conditions, has the following to say regarding the lumber business: "Lumber operations were carried on during the winter of 1914-15 on a reduced scale, the outlook being unsatisfactory owing to the general depression in the building trade and the large stock of sawn lumber carried over. The market has been exceedingly dull throughout the year and prices have been low. Sales in Canada have been at a minimum, and there has been a marked falling off in the volume of shipments to the United States. Shipments of deals to the United Kingdom, however, have been larger than usual, and the demand seems likely to continue, though the trade is hampered by the continuous advance in ocean freight rates and the difficulty of obtaining vessel space. The export of pit props for use in the English coal mines is a new industry in which a moderate business has been done during the year. Shipments of soft-wood lumber have been made in about the usual volume to the South Ameri-

can market. Lumber manufacturers generally are carrrying over into next season a large stock of sawn lumber.

"Pulpwood has been more or less of a drug in the market, the demand from the United States being considerably below the average. This is due apparently to lessened requirements for paper and to the fact that the American mills have not only been cutting and using wood from their own properties, but have been using a larger percentage of their reserve wood. As a great deal of the pulpwood cut in the winter of 1914-15 is still unsold, it is expected that the quantity taken out of the woods this winter will be comparatively small. At the time of writing the demand from the United States shows signs of improvement."

Quebec Exports to U. S. Show Gain

Manufactured Paper Products Increase—Raw Material Exports Reduced — Lumber Exports Greater

The exports to the United States from the Quebec Consular district for the year 1915, show a marked increase over those of 1914. Their total value in 1915 was $11,233,409 against $10,185,308 in 1914, an increase of $1,048,101.

Wood and manufactures of wood constituted by far the greater share of such exports in both years, as shown by the following table:

Wood and Mfrs. of—	Unit of Quantity	1914 Quantities	1914 Values	1915 Quantities	1915 Values		Increase or Decrease
Paper: Printing	lbs.	113,848,772	$2,360,702	170,963,066	$3,291,185	+	$ 930,483
Sheathing	"	.....	.....	537,356	10,257	+	10,257
Wrapping	"	3,449,299	103,631	9,365,083	285,805	+	182,174
Pulpboard	"	553,840	11,038	101,899	2,054	—	8,984
Other		.....	3,560	.....	2,510	—	1,050
Total	lbs.	117,851,911	$2,478,931	180,967,404	$3,591,811	+	$1,112,880
Pulpwood: Rough	cds.	74,325	$ 461,880	97,482	$ 560,456	+	$ 98,576
Peeled	"	164,267	1,203,520	114,963	797,976	—	405,544
Rossed	"	54,314	510,002	49,012	410,701	—	99,301
Total	cds.	292,906	$2,175,402	261,457	$1,769,133	—	$ 406,269
Lumber n.e.s.	m.ft	43,978	$1,034,364	59,016	$1,112,585	+	$ 78,221
Lath	"	21,304	62,500	32,429	90,254	+	27,754
Woodpulp: Mec'y Gr'd	lbs.	134,736,336	$1,163,744	124,589,835	$ 951,897	—	$ 211,847
Chem. Unbleached	"	78,253,571	1,535,833	113,238,177	2,041,085	+	505,252
Sulphite	"	.....	.....	3,251,168	48,927	+	48,927
Total		.....	$8,450,774	.....	$9,605,692	+	$1,154,918

From the above it will be seen also, that it was wood and wood products that account for the increase in the exports from this district, such increase for 1915 amounting to $1,154,918. The chief decrease of all other exports being chargeable to that of Aluminum, a decline due undoubtedly to the war, which has curtailed the exportation to Europe.

Among the manufacturers from the products of the forests it is again the remarkable increase in the production of newsprint, and other papers, that has helped to swell the volume of exports in 1915 from this district, such increase aggregating $1,112,880. The manufacture of this article of export to the United States has made a more rapid advance than any other export article—in fact it has advanced by leaps and bounds, the value being $173,561 in 1910, $211,616 in 1911, $270,181 in 1912, $1,059,597 in 1913, $2,360,702 in 1914 and $3,296,185 in 1915. Lumber exports have made no such record, but have nevertheless held more than their own—these aggregating $1,034,369 in 1914 against $1,112,585 in 1915, an increase of $78,221.

This is not a bad showing especially in view of the conditions of the lumber trade in the United States during the past year, which as a whole, according to the Lumber World Review has had the most unsatisfactory and peculiar business in its history.

"Lumber," it says, "more than any other article of commerce lacks uniformity of measure, both as to qualities and quantities. No two acres of ground and no two trees on the same acre of ground produce an exactly similar quantity or quality of product, hence lumber is never quotable as to values, actual or comparative,—hence the utter impossibility of making a conventional report of so-called market conditions as compared with other products of the soil."

"Lumber is not controlled as to price by the known volume of stocks on hand, as the production is so diversified among the 45,000 sawmills of the country, that the amount of stocks on hand can never be stated. Even the number of sawmills, cutting lumber, may increase or diminish a number of thousands in the course of a month, influenced alone by the demand for lumber."

The exports of pulpwood from this district, for the first time for some years, show a decrease, amounting to $406,269, for 1915. This decrease is chargeable to the peeled and rossed wood exports, the latter declining by about $100,000 and the peeled by $405,544, a decline in both, which was only partly counterbalanced by the increase in the rough pulpwood exports, which show an increase of nearly a hundred thousand dollars.

It is too early to assign a reason for this decline in wood exports, all of which have always gone to the United States, but it may be assumed, that the great increase in paper manufacturing in this district may account for the decreased exportation of the raw wood material.

The most gratifying conclusion to be drawn from the above figures to the people of this district and the Province of Quebec as a whole, must be, that this section of the Dominion is fast becoming one of the great paper manufacturing districts of the world. In 1910, only five years ago, this class of exports represented a value of only $173,561,, while in the past year they aggregate $3,591,811. The exports of paper from this district thus constituted nearly one-third of the total exports, while those comprising all of the products of the forest exceeded 85 per cent. of the total exports from this district in 1915.

Such development of the industries of this province based on its forest resources, should bring home to its people the great need of forest protection, and re-forestation, where possible, to ensure the continued prosperity of its most important industry.

Quebec Cullers' Report for 1915

The following shows the quantity of square and waney timber measured through the office of the Supervisor of Cullers at Quebec, P. Q., during the year ended 31st December, 1915, and the previous year:—

Description of Timber—	1915 Pieces	1915 Cubic Ft.
Waney White Pine	7,345	401,680
Square Oak	2,661	144,520
Square Elm	1,094	48,960
Waney Ash	48	840
Waney Birch	2,355	48,880
Waney Maple	34	1,240
Waney Walnut	528	9,400
Square Hickory	65	3,040
Round Aspen Logs	3,317	12,680
Total	17,447	671,240

Banking on Continued Improvement

Editor Canada Lumberman:— East Angus, P. Q., January 20th.

We are of the opinion that the lumber business is in a much more prosperous and healthy condition than it has been for some time. Our entire cut for last year has been sold and is now being shipped out as fast as we can secure the cars, and we are also of the opinion that the lumber trade will continue to improve over the coming year. As we do not make any sales ahead, taking chances with the market, we anticipate a very substantial increase in prices in the near future.—Brompton Pulp and Paper Company.

Outlook in Eastern Canada Improved

Editor Canada Lumberman:— Montreal, January 10th.

The outlook is better than it was at this time last year. No doubt the trade with Great Britain will be equal to that of the past year, and the markets of the United States are improving every week.—A. MacLaurin.

New Brunswick Trade During 1915

Remarkable Price Fluctuations and Uncertainties in Demand Handicapped Manufacturers

St. John, N. B., Jan. 21st—(Special to The Canada Lumberman)—The year just gone by has been the strongest year in the lumber trade for many years. Conditions unprecedented, caused by the war, were arising not only month by month, but day by day. In the first part of the year, English buyers were out to pay any price asked by manufacturers, and sales of English deals were made on a basis of about $19 to $19.50 per M. on wharves at St. John. In fact even higher prices were paid to some manufacturers on the North Shore of New Brunswick, one concern having, it is said, received $21 per M. right through for their cut of deals for 1915, the highest price ever paid for deals. Stocks on the yards were light, both at shipping and at receiving centres. Consumption in England was beyond normal as the admiralty were taking anything they could get. All through the winter these conditions prevailed, but when spring came the whole bottom seemed to drop out of buying and deals were a drug on the market. The trouble was not because of no sale for stocks but for want of bottoms to carry cargoes. Freight through the winter had advanced from 100 shillings to 175 shillings by spring, with no tonnage even at that offer. The British and other foreign governments allied themselves, and, when they wanted cargoes, sent out their own requisitioned vessels, but outsiders stood a pretty small chance of getting anything at any price. Hence, buyers became frightened and quit buying along in May and no sales were made from St. John of deals until December. Any persons who went to sell deals were told they were not wanted, or if they were in financial difficulties and had to sell, a price was offered which would not bring the cost of the log, let alone the cost of manufacturing added. These conditions pertained through the season, and when fall came, no one had the heart to go into the woods to cut logs, as no inducement was offered to them in the way of a chance to sell. Of course concerns who were well able to do their own financing and had plants to take care of have gone to the woods, but on a reduced scale.

During the whole season with the exception of the two last months the American market was in a stagnant condition. Prices were away off and sales were very hard to make, the base price at Boston being from $21.50 to $22.50 all season, and parties who had put on high priced logs would not get a new dollar for an old one.

Many mills did not turn a wheel, and those which did would have been better idle. Along towards fall a sudden revival took place, first in spruce boards, which all summer one could not give away. These advanced, following a sale of large quantities of North Carolina roofers to the allies. This, coupled with the demand for shell boxes, gave an impetus to spruce boards, running prices from nothing up to $18 per M. today at the mills. Following this came an advance in spruce dimensions from $22.50, until today it stands at $27.50 to $28, Boston base price. How long this will continue is hard to say, but if ever any business needed revival it is the lumber business, as, during the last few years it has been extremely hard for mills doing an American business to show a profit.

Locally, conditions have been bad. Very little building has been carried on and if any sales were made they had to be put through at cut throat prices. All kinds of refuse and low grade stocks were sold from $3 to $4 per M. less than a year ago. In fact it was almost impossible to give refuse away at any price. Boards were piling up all around with no chance to clear them off, as sheathing and floorings of all kinds were selling, when one could make the sale, at $4 to $5 per M. less than for a year previous.

British Columbia Fir was being sold at St. John for less than one could afford to sell spruce. Today, while building conditions have changed to no extent, stocks of boards and refuse are fast disappearing, being purchased for foreign markets and by spring very little of these stocks will be for sale, and unless something unforseen arises, better prices should be had in the local market. B. C. Fir has advanced $3 per M. during the last month and if it only continues to advance it should help our eastern pine and spruce.

Laths have held about the same all through the season, with the exception of a slight drop during the summer months, being worth today about $2.75 on wharves here.

Shingles remain in the same weak condition of a year ago, and no outlook of a change, although in this section stocks are not heavy, and very little cedar is being cut this winter.

As to the outlook for 1916; never was it so hard to forecast as it is today. While at the present moment the market shows a better tone, it may not continue for any length of time. A much less cut of logs and lumber is being made in this section than a year ago, but that will have very little to do with the position as a whole. Should the war end it is hard to say just what effect it would have upon the lumber business, there are many economic conditions to be thought and worked out and the person who can forecast correctly, will be hard to find, but it is to be hoped that 1916 may show a year such as lumbermen all over the country are looking for.

Expects Normal Cut on New Brunswick North Shore

A number of recent reports from lumbermen on the North Shore of New Brunswick have indicated that the output of logs in that district during the present winter will not be more than 60 per cent. of the normal output. One prominent lumberman, however, who has had a long experience in this part of New Brunswick expresses the opinion that the cut this winter will be normal, and will reach 100 million feet. He also states that he expects 1916 to be a very profitable year for the lumbermen of the North Shore. The European market he said, is good, but some shipments of lumber are still being carried on in the Baltic in spite of the war. The chief difficulty at the present time is to secure tonnage, and, as a result of the shortage of vessels during the past year, more lumber is being carried over this winter than there was a year ago. "Lumber prices today," he said, "are good. The weather conditions will not cut much of a figure, and there is nothing to prevent the season of 1916 being well up to the average."

St. John Exports to the United States

The U. S. Consul at St. John, N. B., reports that exports from his district to the United States during 1915 were valued as follows:

Lumber	$115,977.86
Wood pulp	144,163.57
Pulp wood	11,625.00
Laths	88,938.63
Shingles	9,620.00
Pine boards	5,693.59
Ships' knees	152.50

N. B. Firm Expecting Continuance of High Prices

Editor Canada Lumberman:—

The stocks that are being held in the northern part of New Brunswick are larger than for some years, owing to the fact that tonnage was most difficult to procure and also owing to the extremely high ocean freight rates. Most of the stock in the northern part of New Brunswick was sold by the millmen to the usual English buyers, and as far as the mills were concerned, they have been paid for the stock, as the contracts provided that any lumber unshipped was to be paid for on the first day of December. There is only one exception to this, so far as we know, a company which did not sell its stock and has a quantity variously estimated at forty to forty-five millions on their yards. It is unfortunate that the shippers had not enough foresight to have taken vessels as, even with the high rates asked today, 200 shillings and in some cases more, the lumber could be sent forward to these markets and sold at a profit. It is estimated that there is forty-five millions of sawn lumber on the Miramichi, thirty-five to forty in Campbellton and Dalhousie and from forty to forty-five million elsewhere.

There will be some curtailment in the cut this present season, partly brought about by the uncertainty as to whether the buyers would come forward as usual, and the fact that smaller operators were discouraged by their banks. The winter, however, has been favorable and there is no doubt that the larger mill men will cut as much as last season. The English buyers, who, by this time last year had closed for the new cut, have not done so this year and are still holding off. Thus, with the uncertainty of procuring tonnage and with the liability of having a larger stock to hold and pay for next year, buyers are very cautious and they can hardly be blamed for this atttitude. Our own opinion is that they will come on a little later and that prices will be equal to last year, which were the best that the millmen in this section have received in the history of the trade.—N. B. Manufacturer.

Everything Depending Upon Ocean Tonnage

Editor Canada Lumberman: South Nelson, N.B., Jan. 14th.

The lumber business of the northern part of New Brunswick is almost entirely in the manufacture of stock for the European market, principally that of Great Britain and Ireland, for which the class of logs we now have seem to be better suited, a very small proportion of our long lumber finding its way to the American markets. Consequently we are not affected by the U. S. markets except indirectly, as when prices are good in the American markets stock from the upper provinces and even from Maine which otherwise might come into competition with ours in Great Britain finds its way to the United States.

Therefore in dealing with our lumber situation it must be considered entirely in its relation to the markets of Great Britain.

After the outbreak of the war in August, 1914, the closing of the Baltic ports, and the development of a heavy demand for lumber for war purposes, prices in the English markets began to advance but as most of our manufacturers had disposed of their season's cut the advantage was with the middle

man. The season closed with prices strong and demand good and for the cut of 1915 manufacturers received the highest prices (so far as we know) ever paid for spruce in New Brunswick. These deals were all sold f. o. b., buyers providing tonnage. This proved to be no easy task, as, owing to the number of vessels being taken over for war purposes, freights advanced very rapidly, for instance from 40 shillings to 42s. 6d. in normal times to 130 shillings and even, we understand, as high as 175 shillings per standard for deals from Miramichi to English ports. Even at this excessive rate the required vessels could not be procured. The result being that the buyers were unable to remove their purchases and a large stock is being held over.

It is rather early to predict what will happen in 1916, owing to the difficulties in securing vessels, the large stock held in England or on this side, and the general business uncertainties. Operators have been rather reluctant about cutting stock during the present winter and it is generally conceded that the stock available for manufacture in the spring of 1916 will be less than usual.

So far, we have had a favorable winter, and this may have the effect of increasing the output somewhat. As to probable prices we are still confronted with the freight problem, but if the lumber is required and the Baltic ports still remain closed, we are the principal, if not the only, source for a class of lumber which is very largely used and while perhaps we cannot look for much advance we certainly feel prices should not fall below those of last season, especially as the recent advance in prices in the United States will no doubt, as already intimated, have its effect indirectly.

Nova Scotia Deal Shipments Increased

Shipping Situation Governed the Trade—Small Schooners Did a Fine Trans-Atlantic Trade—Woods Output Reduced

Written Specially for the Canada Lumberman by Elihu Woodworth

It was to be expected that great changes in business conditions throughout the world would be effected by the great war in Europe. Such expectations have been fully realized, but in many cases the results are very different from those that were anticipated. Some commodities, such as cotton, have been declared contraband, and their export has been prohibited under pain of forfeiture; some goods which were the exclusive products of one of the warring nations, are not to be had at any price. Flour at one time showed a disposition to reach an altitude very uncomfortable for the consumer, but bountiful grain crops have brought prices down to something like a normal condition. Prices of nearly all the necessaries of life have advanced to a greater or lesser degree, and any goods which have not felt the upward tendency of prices are those for which there is no pressing demand. Taken altogether the conditions are not so bad as might be expected in war time; and while some manufacturers have been forced to shut down, the loss has been much more than made up by the activity prevailing in the new business of manufacturing munitions.

The lumber season of 1915 opened with exceptional promise for the lumbermen of Nova Scotia. The practical closing of the Black and Baltic Seas cut off a large portion of the usual lumber supply of the British market, while the enormous increase in freight and insurance rates from other ports in northern Europe rendered shipments from them almost prohibitory. In these conditions the British lumber buyers naturally turned to this side of the Atlantic, and in Nova Scotia and the other maritime provinces the prospects of a highly prosperous season appeared to be excellent. The winter's cut had been large, the demand was strong and prices ruled high. Apparently there was nothing to do but take advantage of the golden opportunity. But just here a new and unexpected condition confronted the lumber shippers. To reap the benefit of the great advance in prices it was desirable to get their deals to market as speedily as possible. To do this successfully it became absolutely necessary to secure the required number of carriers but, unfortunately, the needed carriers were not to be had except in ridiculously inadequate numbers. A dozen years or so before this, steamers had begun to crowd sailing ships out of the lumber trade and drive them off the seas, and it seemed that they had almost completely accomplished their purpose and that the day of the "wind-jammer" was done. Owners of staunch Nova Scotian ships, finding they could no longer compete successfully against steam, sold their vessels for whatever they could get for them, and saw them converted into barges for carrying coal or gypsum. Some of the older vessels, not strong enough for barges, were sold to the Norwegians, who, through buying the ships for almost nothing and by running them at the least possible expense, were able to maintain a desultory contest with steam. During the first year of the war the Norwegians largely reinforced their fleet by the purchase at very low prices of a number of English sailing ships and a few old steamers, but when the British government found it necessary to commandeer British merchant steamers for war purposes, the fleets of neutral nations were found to be entirely inadequate to meet the requirements of the world's traffic.

Enter The Small Schooner

About the time when sailing ships ceased to be profitable the shipbuilders and ship owners of Nova Scotia commenced building a fleet of staunch little three masted schooners of from three hundred to five hundred tons register. These vessels found employment in carrying our lumber to the United States and to the West Indies, with an occasional cargo to South America. In the early winter they carried cargoes of potatoes to Cuba, and there they usually got charters for further south, which kept them employed until the next lumber season opened. This business was usually fairly profitable, and some of the tern schooners acquired a reputation as money makers. When the shipping season of 1915 opened and the scarcity of bottoms became an undoubted fact, it was suggested that schooners be used to supply the deficiency in carriers. The suggestion received little favor at first, for it was contended by some who claimed to know all about the matter that only square rigged vessels were fitted to cross the Atlantic. Meanwhile the American market was dull, and very few coasting charters were offered, so some of the schooner owners who were also interested in lumber decided to find out what the schooners could do as ocean carriers. Accordingly a few cargoes were shipped early in the season to test the matter, and, as the schooners made good time and returned safely, the remaining vessels of the same class were soon in commission as deal carriers. One Parrsboro tern schooner, the Exilda, of 350 tons register, has made something of a record since engaging in the new business. Since sailing from Parrsboro on March 18th, 1915, she has discharged three deal cargoes in England, and on the 11th of January she arrived at Havre with her fourth cargo. All the schooners have done well, with the exception of the L. C. Tower. This fine Parrsboro vessel, of over five hundred tons register was torpedoed near the English coast before completing her first voyage. Her place will be filled next spring by a vessel of about the same tonnage, built in the same yard and having the same owners. It is not expected that sailing ships will be able under normal conditions to compete with steam, but last season proved that they are still useful in emergencies, and Nova Scotian schooners hitherto regarded as practically a negligible quantity in ocean traffic, have been able with the aid of Norwegian, Swedish and Danish barks and a few small steamers of the same nationalities to carry from this province to the United Kingdom more deals than were ever shipped in one season before.

Shipments Show an Increase

The total lumber shipments from Nova Scotia last year are estimated at five hundred million superficial feet. The word "estimated" is used advisedly, for it is practically impossible to obtain the exact figures, and the most definite statement must be, to some extent, a matter of estimation. The measurements of deals, boards and battens, may be obtained with sufficient accuracy, but in the case of some other products classed under the general head of lumber, the cost of ascertaining the exact dimensions would be much greater than any advantage that could be derived from it. When the exports from one country include, in addition to regular lines of lumber, such items as piling, of varying lengths and sizes; maple logs, barrel shooks, boat masts, flag poles, clothes line props, and pit timber it is evident that it would be difficult to reduce the output to superficial feet. When one mill turns out annually from three to four million dowels of various widths and varying from twelve inches to forty-eight inches in length it is reasonable to assume that the only way in which the quantity of lumber in the lot will be reached will be by estimation. The estimates of last season's shipments were probably inaccurate and may have been wide of the mark, but it is pretty certain that the deal shipments to Great Britain were larger than in any other season, and would have been still larger but for the scarcity of vessels.

The enormous increase in freight rates was another condition arising from the war which, of course, had a marked effect upon the lumber trade, and which could scarcely have been fully anticipated. The freight on deals to England, which had been as low as twenty-eight shillings per standard, but which had gradually increased before the war, naturally made a rapid advance when hostilities commenced.

The rate had advanced to about seventy shillings per standard when the season of 1915 opened, and it immediately began to soar. The rate mounted with marvellous rapidity, and even the slump in prices in the British market did not arrest its upward course. At the end of the year it had risen to the almost unbelievable height of two hundred shillings and, apparently, the end is not yet in sight, for it is reported that a vessel has been chartered to load at Halifax at two hundred and twenty shillings. Small wonder if shippers hesitate to charter in advance at such rates, for it may well be doubted whether next season's prices in the British market will justify paying such exorbitant figures. The prevailing freight rates and their very pronounced upward tendency are having the effect, as might be expected, of reducing this winter's lumber cut.

Another condition created by the war, and one that affected the lumber trade very materially, was the marked reduction in the rate of sterling exchange. The value of the pound sterling was at one time down to $4.50, and the average reduction in rates during the season would probably amount to one dollar per thousand feet in the price of lumber. This, in some cases, would mean to the shipper the difference between a fairly profitable transaction and actual loss, and, combined with the increased cost of insurance and very heavy war risks, caused a marked reduction in the net receipts. Exchange with the West Indies was also extremely high, and, while it did not prevent large lumber shipments to West Indian ports, will undoubtedly have an injurious effect upon next season's business unless some guarantee can be had of more reasonable rates.

Outlook for 1916 Uncertain

The outlook for next season's lumber trade is by no means clear. The business has been so completely revolutionized by the new conditions which have arisen that it is extremely difficult to make satisfactory forecasts. The difficulty is increased and intensified by the fact that some of the disturbing conditions are constantly changing and new and important conditions are liable at any moment to arise. Some operators will cut as much lumber this winter as in former years, but others are as dissatisfied with the prospect that they will largely reduce their output. Some well informed lumbermen estimate that this winter's cut will not be more than two-thirds of the annual output of recent years. Assuming this estimate to be approximately correct it is yet possible that under favorable conditions a big business may be done next season, for, in many parts of the province, large stocks are being carried over.

The largest shippers in the Maritime provinces are George McKean Company, Ltd., Malcolm McKay Company Ltd., and John E. Moore Company Ltd. All three firms have their headquarters at St. John, N. B., and all have agents in Nova Scotia. The George McKean Company, shipping from Quebec as well as from the Maritime provinces, handled last season approximately two hundred million feet of spruce, pine, hemlock and hardwood, nearly all of it going to the British market. The John E. Moore Company did a much larger business in Nova Scotia last year than ever before, and a large part of the one hundred and twenty-five million feet, or more, shipped from Halifax was handled by that firm.

Making pit props has long been a flourishing industry in the vicinity of our coal mines, but it remained for the great war to develop an export trade from Nova Scotia by causing a shortage in the supply from the ports of northern Europe. A number of these humble but important pieces of timber found a place in last season's shipments, and it is said that there will be a largely increased output this winter. It would seem, however, that only an abnormal demand and the consequent increase in price can make the British market for pit props a profitable one for our lumbermen. With ante bellum prices and a reasonable rate of freight we should be unable to compete successfully with Newfoundland, which has cheaper labor and an unlimited supply of suitable timber within easy reach of shipping.

One feature of the situation which perhaps deserves passing notice is that nearly all the late shipments from this province went to France instead of the United Kingdom. This is a new departure in the Nova Scotia lumber trade, and if this new demand should continue, it may be assumed that it will be possible to repeat or continue the unprecedented business of last season, even in the face of a continued scarcity of ships and excessive freight rates.

Editor Canada Lumberman: Wilkins Siding, Queens County. Jan. 8th.

The outlook for 1916 depends very largely upon securing a sufficient number of vessels to move the stock needed in European markets. This applies to the United States as well as to the Maritime Provinces, as car competition from the Southern states dominates the New York and New England markets when they are unable to ship across the water owing to scarcity of vessels, and facing a shutdown, or selling at a "dumping" price in car lots.

The "dumping" price always gets the decision. Then the retail yards are able to stock up at prices the near-by manufacturer cannot afford to meet. Then Nova Scotia and New Brunswick commence shipping boards and randoms into Boston and New York, manufactured with but little attention to the requirements of those markets, and this of course adds to the demoralization and consequent unsatisfactory returns.

If the lumber manufacturers on both sides of the boundary would put in less time in fighting about the tariff and more in studying market conditions and transportation necessities, we would have less "dumping" and demoralization. It would be an "eye opener" if Canada and the United States could know how much in actual cash, shipping conditions have cost them during the past fifteen months.

It seems strange to me that we lumbermen who have squeezed each department of our manufacturing cost down to the last possible cent, continue to advocate shipping laws and conditions that are bleeding us to the tune of dollars in our marketing cost, with no possible way to recoup ourselves from the final purchaser.

It is true that the United States manufacturer is worse off than the Canadian, by reason of foolish coastwise shipping laws, but that does not help Canada to market in Europe. Think it over and watch that British Columbia government ownership scheme.—Rufus S. Webb.

Nova Scotia Situation Uncertain

Editor Canada Lumberman:— New Glasgow, N.S., January 6th.

The lumber cut for export in the central and eastern portions of Nova Scotia, nearly all finds a market in Europe, especially in Great Britain. As a result of the hitherto unheard of high ocean freights prevailing, and the general industrial conditions in Britain, consequent upon the war, the prospects for the export lumber market at present are not at all favorable. It may be that the very high prices for lumber prevailing this time last year have somewhat spoiled operators on this side. It is certain, however, that the present difficulty of obtaining tonnage, the long detention at ports on the other side, owing to the congestion there, and the fact that there is small demand for wood products in Britain, except for Government purposes, all tend to make lumbermen exceedingly cautious in regard to present operations. Stocks in this part of the country are very low, and as far as the writer can estimate, the cut in this district will be not more than one-half of last season. This reduced output, if general throughout Canada, should tend to stiffen prices later in the season. If ocean freights continue at their present high level, prices must certainly stiffen if the stock is to go forward. It would seem, however, that all things considered, this was a time for operators to go slow.—R. M. MacGregor.

New England Conditions Promising

Editor Canada Lumberman:— Boston, Mass., January 3.

We have about the usual mid-winter conditions here, although we think trade is possibly a little better than the average winter trade. We have had snow lately and a good deal of bad weather, which has not improved business. The lumber business in New England we think could be considered good for this time of year, with prospects quite good, barring some accidents in the political line, that is, if this country keeps out of foreign entanglements we seem to have every reason to expect good trade this year. There has been a rather limited supply of dimension spruce, which has kept the price pretty fairly high, spruce frames selling as high as $26 to $27 per M. We would say that the average price today is about $26.50. Random has not advanced so much, but has advanced $1 or $2 per M. Southern pine and N. C. pine in the lower grades, which are largely used in matched boards called roofers, have advanced all the way from $3 to $5 per M., nearer $5 than $3. Other grades of Southern pine have advanced $2 or $3 per M., possibly more. Prices are very irregular.

We understand that there is a pretty strong demand in the interior of the United States all through the Mississippi Valley section. On the other hand, the scarcity of tonnage is seriously handicapping the exportation of lumber, and in fact is hampering the coast-wise trade, and may have an immediate bearing on the price at the mills.

So far the English trade seem to have been afraid to take hold of their usual cuts of deals, as they do not know how they are going to get it across the ocean or what they will have to pay for tonnage. It would look for the time-being as though the spruce market here was stationary, with a little tendency to sag. This is usual during the winter months. There is usually some falling off in price during January and February. We hardly think this year will be an exception.—New England Wholesaler.

Nothing But Sunshine Ahead

Editor Sanada Lumberman:— Boston, January 20th.

The lumber manufacturers have certainly been having a very severe depression. First came many large cargoes of Douglas Fir from Pacific Coast via Panama Canal, which were sold irrespective of, and way below cost of production, and dumped onto an already dull market. Then came declaration of war and everyone began to pull in and no new buildings were planned, yards stopped buying.

In addition to above causes, and antedating them, was the hostile attitude of the Inter-State Commerce Commission, which hammered the railroads so hard that now quite a goodly percent are in hands of receivers. This in-

sane work of the Commission put the roads out of action as consumers and it is a well known fact that they are, (if given a chance), the largest consumers in the country. Things looked very black indeed, and our country, under present government, was dropping astern very fast in exports, in fact had dropped from an excess of some six hundred millions exports over imports to nearly that amount excess imports.

Then the war countries came to the rescue and orders by the hundred million dollars poured in, changing again the excess exports and literally throwing vast quantities of money here, for goods sold at fabulous profits. The easy money and orders have at last had effect and general business has improved and late in 1915 lumber began to advance very sharply and we have placed on our books for United States market large orders for winter and summer sawing at better than $28 base for frames, which frames were $22.50 to $23 in the summer of 1915. Mr. George VanDyke for some years before his death predicted $30 frames. If he had lived to the spring of 1916 I am beginning to think he would have seen his prophecy come true.

The war started us on the up swing and we are now a very large creditor nation and it has given such an impulse that nothing can stop it this year, as we have not only munition business to care for but the regular staple lines are extremely busy and many new mills and additions are being built and planned.

A friend just back from abroad says: **"Pay no attention to the sales end at present. Get a good big stock of logs, as the foreign demand must have it all."** When one considers the immense foreign demand not only for regular lines but for consumption for soldiers' huts and for use in the trenches at the front, his ideas are perefctly sound.

There is one change we may see as regards values and that is that 9 in. may and will go the same value as 10 in. and the difference between wide or 9 in. and up and the 8 in. and under is to be more marked.

Even though the war should cease, and I see not the faintest chance of that happening at present, business in lumber it seems to me is bound to be good for some time as so much of the destruction must be rebuilt as fast as possible. The year 1916 certainly has nothing but sunshine ahead.—F. B. Cutler.

New England Trade Suffering Because of Embargo

Editor Canada Lumberman: Boston, Mass., January 21st.

There is no active business at the present time and nothing can be shipped into New England now from Canada anyway on account of the embargo. This includes nearly all points in New England. Nothing can be shipped from west of the Hudson River or north of the Canadian border to B. & M. or New York, New Haven & Hartford points, which includes practically the whole of New England. As to how long this will last nobody seems to know The railroads of the United States seem to have broken down. They do not seem to be able to take care of the business offered them and the munition business has taken up so much of their capacity that other business seems to suffer. We are in hopes that the railroads will gradually improve their facilities and that with spring weather things will go better. At present it is very seriously handicapping business. We are inclined to think even after the present embargo is declared off there will be so much stock rushed in that the railroads will have to declare another one, so we look for intermittent shipment of lumber and other things for some time to come. There will probably be a short time when stock can be shipped and a time of embargo again, but we are not given particular hopes that this embargo will be off for two or three weeks. However, information is practically impossible to get in that line.—Shepard & Morse Lumber Company.

A Banker's Review of the Lumber Trade

Mr. Edson L. Pease, general manager of the Royal Bank of Canada in his annual review of the bank's activities during 1915, dwelt extensively with industrial and trade conditions throughout Canada. In the course of his remarks he made frequent reference to conditions in connection with the lumber trade and industry.

In British Columbia, he said, lumber conditions were unsatisfactory during 1915 and prices were low until late in the year. The last two months however, had seen a distinct improvement in demand and price, particularly from the United States. Important orders had been obtained from the British Admiralty. Exports of lumber for the nine months ended September 30th had amounted to 50,408,000 feet as compared with only 29,516,000 feet during the corresponding period in 1915. Only the lack of adequate shipping facilities had prevented the further offsetting of the decline in the home demand for lumber.

In Ontario, lumbering operations had been less extensive than for some years past and operators had not yet sufficient courage to take out large stocks of logs. A shortage of men had brought wages from the low level of the previous year quite up to the average. Building permits issued during 1915 in twelve of the principal centres in Ontario showed a total of about one-third of those issued during 1914.

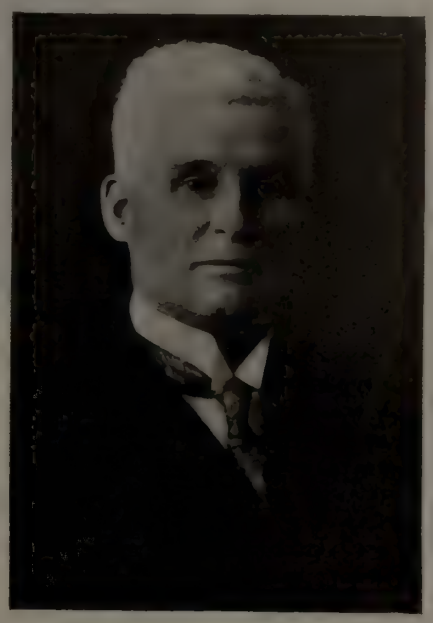
In Quebec, the lumber interests experienced poor results similar to those in the west, owing to the light demand from local markets and from the United States, and to the scarcity of shipping facilities for export. The value of new buildings erected in Montreal during the year showed a decrease of nearly 50 per cent

In the Maritime provinces, lumber operations had been conducted on a larger scale than usual. Manufactured lumber shipped to the British markets had been disposed of at maximum prices, and the high freight rates had been borne by the importers, so that the results were not seriously effected by the low prices prevailing until recently in the American market.

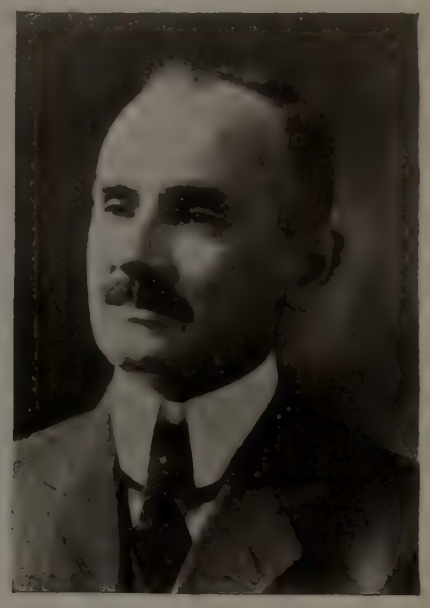
In Newfoundland, more timber had been cut during 1915 than in several preceding years, the demand being good and prices high. The pit-prop industry had developed considerably and there was every prospect of further profitable expansion.

Shingle Men Report Better Trade

Canadian White Cedar Shingle Association Annual Meeting—Outlook Good—Officers Elected



Angus McLean, Bathurst, N. B.



W. F. Napier, Campbellton, N. B.

The annual meeting of the Canadian White Cedar Shingle Association was held at Bathurst, N. B., on January 5th. There was a large and representative gathering from all the mills interested and the annual sales, etc., for the past three years were gone over in detail. This association succeeded the North Shore Shingle Association when Price Bros. & Company, Limited, and Fraser Limited joined. Practically all the large interests in the white cedar shingle manufacture are now members.

The same directorate was re-elected and for the fourth year Angus McLean, of Bathurst, N. B., was unanimously elected president.

A "sales and advertising board" was appointed as follows: A. C. Morrison, of Price Bros. & Co., Ltd., Quebec; W. F. Napier, of the Shives Lumber Co., Campbellton, N. B.; S. B. Bond, of the Bathurst Lumber Co., Bathurst, N. B.; W. Matheson, of Fraser Limited, Fredericton; F. G. Wheaton, Canadian Sales Agent, Amherst, N. S.

It was also decided to maintain a representative for Ontario and Quebec and the appointment was made of Mr. Alf. H. Gilham, 78 Pearson Ave., Toronto, who in future will call on the trade in this territory.

The discussion of trade conditions brought out the following facts:

The United States market has been improving steadily on "extras" and "clears." Of "extras" there is but a limited stock at any of the mills, while the "clears" are practically all sold.

In the lower grades from "2nd clears" down, all of which are marketed largely in the Canadian market, there are dry stocks available of the 1915 cut for immediate and early spring shipment.

The sales in eastern Canada for the past three years have shown but little difference. Ontario, on the other hand, fell off in 1915, but present enquiries from that province show a better feeling and with a representative on the ground there is no doubt there will be a substantial increase in the sale of white cedar shingles in that market.

As the merit of white cedar shingles is impressed on buyers the demand is bound to grow. In the lower grades, that is, "2nd clears," "clear walls," "specials" and "extra No. 1s," no such value can be obtained in any patent roofing or wall covering. The life of white cedar shingles is from twenty to thirty years, even in the lower grades, and no complaint is ever made by the users in regard to leakage. The outlook for 1916 in the United States market is excellent for white cedar "extras" and "clears."

The United States market for white cedar shingles improved both in demand and price throughout last fall. The association is looking for a heavy demand and high prices in that market next spring.

British Columbia Trade During 1915

Co-operation between government and industry promotes trade expansion—Export trade reviving—Prairie trade improving

Written specially for The Canada Lumberman by Hon. W. R. Ross, Minister of Lands for B. C.

Review of 1915:—No previous period in the history of the Province has so clearly demonstrated the underlying strength of the lumbering industry of British Columbia as the year which has just closed. After six months of war following upon one of the severest world-wide financial depressions of recent times, the prospects of the industry at the beginning of the year could hardly have been worse. Large stocks of lumber were on hand; the mills had been unable to collect on rail shipments made the previous years, and financial pressure was forcing further sales below cost of production. The lack of shipping had reduced export from the Coast to an insignificant proportion of the annual cut. With the further continuance of the war the prospects for 1915 were most discouraging. Many mills were shut down and others were preparing to do so.

Hon. W. R. Ross. Minister of Lands, Victoria, B. C.

It is a matter for congratulation that in the upshot the year proved better than had been expected. Before the summer was over the export trade showed some revival and kept a number of mills and camps in operation which otherwise would have had to shut down. In nine months, over fifty million feet of lumber were exported as compared with 38 million for the whole of the previous year. The total for 1915 may be expected to double that for 1914. This result was largely due to Government co-operation with the industry in securing British Government business. By August, as a result of the large crop then assured a decided change for the better in the prairie lumber market took place. The prairie crop proved even larger than was expected and later in the year further improvement took place in the lumber business and better prices prevailed. The demand for lumber for farm buildings which had been unduly curtailed by the force of circumstances in previous years revived. To assist this movement to the full, pamphlets covering every form of building for the prairie farm have been prepared by the Department of Lands and are being widely advertised and distributed in the three prairie provinces.

A commercial service has been established on behalf of the lumbering industry in three of the most important markets for British Columbia products with experienced lumber commissioners at London, England; Toronto and Regina. The investigations now being carried on by Special Trade Commissioner H. R. MacMillan in other overseas markets are yielding most valuable results. Exhibits have been placed at important trade centres throughout the world, publications dealing with our forest products have been issued and distributed to buyers, and recognition of the qualities and uses of British Columbia woods is being obtained in every accessible market.

The outlook for 1916 is far different to that of a year ago. Lumber prices are increasing in the export market, demand is stronger and only the lack of tonnage prevents our mills from taking full advantage of the situation. The attention now being devoted to the shipping question by all interests concerned, will undoubtedly result in relieving the present export situation. A prosperous business in the prairie market is assured, while in Eastern Canada there is an excellent prospect of developing an important market.

Administrative work:—Owing to the conditions which existed throughout 1915, and the reduction of the forest service through enlistment, the amount of field work during the past season was less than in previous years.

Scaling:—The total cut from Provincial lands for the calendar year, as shown by the official scale returns, amounted to about 40,000,000 feet B.M. more than for 1914. The total was made up of 826 million of saw logs, 3,700,000 lineal feet of piling, 296,000 cords of shingle bolts, fuel, pulp wood, posts, mining timbers, etc., and 515,000 hewn railway ties.

The cut of sawlogs and shingle bolts was much larger while the cut of piling and ties was decidedly smaller than during the previous year.

Timber Sales:—The sale of small tracts of Crown timber adjoining active logging operations, and of tracts to supply local demands, by public tender for immediate logging, was very active, considering the condition of the industry, the number of sales and the quantity sold exceeding the figures for 1914.

In all, 98 tracts covering 13,000 acres and bearing nearly 100,000,000 feet of timber were sold, the average stumpage price in addition to royalty received being 80c per M. The amount of cedar and hemlock purchased greatly exceeded the figures of the previous year.

Examinations:—The expired licenses, leases, applications to purchase, pre-emptions and surveyed Crown lands examined in order to determine their legal classification, amounted in the aggregate to 193,000 acres, bearing a stand of 879,000,000 feet B.M. Of the total area 53,000 was found to be timber-land, and was recommended for reserve. while 81,000 was classified as agricultural land.

Inspection of Logging Operations:—During the year the field force made 669 inspections of ordinary logging operations, and 268 inspections of hand loggers operations.

Sawmills:—No new sawmills were erected during the year, the annual capacity remaining in the neighborhood of 2,500,000,000 feet.

Fire Protection:—In that part of the province lying east of the Cascade Mountains, the temperature and rainfall were nearly normal and no difficulty in controlling the forest fire situation was experienced during any part of the season. On the Coast, however, the summer was one of the driest and hottest known, and the fire hazard was serious throughout the season. Fortunately there were no strong, dry winds, and the losses were comparatively light. The force of fire wardens was smaller than in 1914, numbering 177 long term guards and 25 patrolmen, as against 190 and 121 respectively of last year. The fire permit system continued to be the greatest safeguard against the spread of clearing fires. In all, the patrol force granted 9,515 permits to clear 52,000 acres of land. Of this great number only 55 escaped control. Only 66 fires were set without first obtaining a permit. During the year 1,031 uncontrolled fires were reported. These fires burned over 244,000 acres and destroyed or damaged 187,000,000 feet of merchantable timber and $58,000 of logging equipment and other property, the total damage from fire being estimated at $166,000. In 1914 the number of fires amounted to 1,832, the acreage burned to 355,000, the timber destroyed to 102,800,000; damage to property $364,000.00; and the total damage to $436,000.00. The greater loss of timber in a less dangerous season is due to the necessity which existed for keeping fire fighting expenses to a minimum.

The cost of patrol in 1915 amounted to $160,000, of fire fighting $22,000, a total of $182,000. In 1914 patrol cost $23,000, fighting fires $144,000, a total of $372,000, just double the cost for 1915.

Permanent Improvements:—While war conditions prevented the carrying out of the programme outlined in previous years, for permanent improvements, considerable work was accomplished by the members of the regular force. With an expenditure of $5,000. Three hundred miles of new trail were built, 36 miles of telephone line erected, 12 cabins and 8 boats completed. The guards were able to clear out 800 miles of trail and repair 250 miles of telephone line without interference with their patrol duties.

Trade Extension Work:—The year 1915 marked the establishment of a new line of work by the Forest Branch, that of development of markets for the forest products of the province. A preliminary forest survey had shown that the annual timber crop which could be harvested was four or five times the present cut. The existing demand, however, could not even take care of the present production. The only possible relief for such a situation was by obtaining wider markets for British Columbia forest products, and the government entered vigorously upon such work as has already been outlined.

Toronto Branch Office:—Of chief interest to the lumber trade of Eastern Canada is the location, as an essential part of the department's trade extension work, of a branch office at Toronto. A lumber commissioner has ben appointed and offices have been taken in the Excelsior Life Building, corner Adelaide and Toronto Streets. An exhibit of British Columbia Forest Products has also been installed at this office and is open to lumber dealers, builders, architects, and the public generally.

The Lumber Commissioner will investigate the lumber market in Eastern Canada and pay particular attention to those lines which can best be supplied by British Columbia woods.

One of the Commissioner's most important duties will be to place before the trade the valuable qualities of Douglas Fir, Western Larch, Western Soft Pine, Western Red Cedar, and Western Hemlock.

B. C. Trade Facing Important Problems

Approach of Greater Activity Brings Forward Important Questions of Over Production, Price Cutting and Other Business Evils

Specially contributed for The Canada Lumberman by E. H. Newton

A year again has passed away, time swiftly speeds along;
We come again to praise and pray, and sing our greeting song.

The foregoing is part of an old familiar song which we used to sing when we were little boys and girls assembled together for the purpose designated therein, and we sang it with fervor and enthusiasm, because we were filled with a simple, trusting faith in one another, and in people and things generally. If it was the stage in our lives

Where Ignorance

was bliss, we were none the less happy on this account.

Today we assemble once a year or oftener, through your medium, or otherwise, not exactly to praise and pray, so much as to look back over the wreckage of time at close range and review with awe and consternation the treacherous outrages which have been perpetrated against our industry. No good comes from minimizing matters of such importance as these, and besides, I feel that there is a responsibility resting upon each one of us, and that there is too much at stake for us to shirk that responsibility, and besides we know that if we shoulder it as men there

Is Bliss,

and a feeling of satisfaction in knowing that we have done our duty as we see it, and with none other than this plea for mercy, I trust that I will be excused if I may have to say things that shock, in pointing out some of the dangers with which our industry has been surrounded.

'Tis Folly To

drift along unheeding these dangers, for they are lurking in our way, and are just as certain in their destruction of our industrial welfare as is the devilish ingeniosity of the wreckers of our ships of commerce.

With a full knowledge of the treacherous attacks which have from time to time been made upon our industry, is it not time for us to

Be Wise

and guard against the traitors which are sometimes found even within our gates? These people may not be part or parcel of the industry proper, but may be considered more in the nature of an appendix to the business end of it, and like that part of our individual anatomy, are capable, if they are over-fed and not closely watched, of deranging our whole system. These people call themselves brokers, but I think there should be a distinction of some kind, for there are some legitimate and honest brokers. (You see I do not go quite so far as the man who said that "All men are liars.") This other kind of broker may have a useful mission to perform, but the troublesome ones should be closely watched, for they are capable of doing irreparable harm, and over-shadowing all the good that they have ever done, and perhaps bringing reproach upon the name of all engaged in the business, causing us to wish ourselves back to the good old days when there were no appendixes.

We are here today friends, not because we have a song of trusting praise to sing. Perhaps many would feel like saying that they are here because they are the victim of circumstances, while others of us might say "We're here because we're here." I say that we are here, trying to conduct a legitimate and honorable business, and lift it from the depths of dishonor into which it has been dragged by causes, some of which have been beyond our control, and land it upon a higher plane.

The old ship upon which many of us have served a goodly portion of a lifetime has been tossed about by the storm of excessive violence for many months. The voyage has been rough and many good captains and crews have been washed overboard. We are the survivors, and as such, it is with renewed confidence and determination that we should take hold and steer the good old ship, which has already recovered sufficiently from the rigors of the storm to instill a feeling of safety in the minds of all on board, or in any way interested, on to greater, and still greater security.

The lumber business has not been the only one to suffer from the effect of all eyes having turned to study the map of Europe during the past few months; neither will it be the last to recover. But if indications count for anything, the demand which will be made upon lumber in the not far distant future will be such as will call for able men, and strong organization to handle it. When this demand comes it is not going to be smooth sailing for the manufacturer, nor are all the huge profits, which have their existence mainly in the imagination of the uninitiated public, going his way. There are breakers ahead, I can see them rolling in. You know there are people who think it is wrong to look out for trouble, and there have been instances where people have been washed from the decks of ships because they did not observe the breaker rolling in upon them, and seek safety before it struck them.

If all the mills in this province were to resume activity tomorrow, sufficient men could not be found in the land to operate them. This is a disagreeable truth, but it is a truth nevertheless. If the demand for lumber should be such that all the mills resumed operation, how many would be satisfied with operating one shift? If there are not enough men to operate the mills one shift, and part of the managers should decide to operate two shifts, what effect would this have upon the labor market both in the logging camps and in the mills when it is hard to get good men for the camps even now? I look for a good year's business for 1916, but I pray for the nervousness which has accompanied most of the transactions of the past year to discontinue. Let us plan as far as it is possible to do so, to anticipate both our needs and our difficulties. Nervousness is a disorganizer, so let us drop it behind for a change. The nervous customer who puts off ordering what he wants until he wants it in a rush, and then stands and snaps his fingers until he gets it, is an intolerable nuisance. We have read a great deal about frenzied finance, but nothing about frenzied lumber operations. We want a Lawson to write a book on this. There is plenty of matter. The man who is imbued with the idea that working at high tension, or constantly trying to do that which is bordering upon the impossible is conducive of best results in lumber manufacturing, and will produce greater profits than the thoughtful and carefully worked out policy applicable to good business and suited to the conditions, is laboring under a mistaken idea of things as they work out in practice. I maintain that when it is going to cost you two dollars to get one, then you are better off without the one, for to try to capture the one dollar under these circumstances would be a symptom of frenzy, and let us hope and pray that for the year 1916 no man worthy of being called a lumberman will develop any such symptoms.

There are several dangers which stand in the way of our real progress, and though they may be somewhat obscure now, they will be real and alive just as soon as the proper time comes. One of these dangers will be bumped into in the same place as it has been found in before. It is located in the narrow channel of over-production, and there does not seem to be any way to get by it without a bump. We have struck it so often in the past three years that we are now beginning to look upon it as a natural consequence. "Oh, but you just predicted great activity in the lumber business," I think I hear some one say. So I do, but it is not going to be an activity that will take care of the whole product of the log. We are going into strange markets, and most naturally expect strange demands to be made upon us. This may not be the best kind of business, and indeed it is pretty well agreed that business that only takes care of part of a stock is not the best kind, but then it is business, and it is up to us as business men and careful guardians to be thankful for small favors.

At the very best there are going to be certain grades and sizes which will accumulate on our hands, but if we all own nervousness or frenzy to seize hold of us and dictate our course, these undesirable acumulations will grow twice as fast, because in our haste to get out other sizes and lengths much stock will be sacrificed, or turned into this accumulation, and it is right here that the congestion starts. We begin to offer the broker inducements to move such stock, which in our frenzy we have piled up in haste, but must of necessity move at leisure, and pretty soon we find ourselves coming to the broker's terms on other stock in order to induce him to move some of the accumulation, and we figure that if we do run low on the good selling stock we can if necessary run double shift for a while and replenish it, quite forgetting, it would seem, that we are again doubling our accumulation of unsaleable stock, and doubling the opportunity for the broker to come back and set a still lower price on something more, always including some of the better stock, and so it goes. It is an old story, and the man who has watched the game played knows it, but what are we going to do to cure the evil? Whether there is work for the scientist to discover something that will give us more backbone, or whether we should go to the phrenologist to see if we are all following the right pursuits, I am not certain, but of one thing I am sure, and that is that nervousness and frenzy are twin brothers, and they are both destroyers of profits and disorganizers of system.

There has been a considerable demand from the other side of the line for some time past, as all know, which in itself is not an unfavorable indication. We can hardly interpret this to mean that the mills

over there cannot supply those needs, but the correct interpretation is more likely to be that the mills over there are standing firmer today than we are, and business, being a part of human energy follows the course of least resistence.

To see the way some people grab at low prices one would imagine that they thought they were giving the industry a stimulant, and were willing to make the sacrifice for the sake of performing a public benefaction. The Lord said, "The poor ye shall always have with you." So this is a settled fact, that some of us must always remain poor, but the unscrupulous "critter" we are not quite so sure about, and we wonder if he is always to remain in our ranks. He goes to the meetings, and he agrees to certain prices, always of course with a string tied to his undertaking with which he can play, and through which he can form a loop to get out if he wants to. This string may be attached to a certain number of cars to load which he will be allowed to accept business enough at the old price. As soon as this edict goes forth the wily dealers, or brokers send in a long list of half completed specifications, (the other being purposely left uncompleted) and they ask the mills for their lowest figures. The mill man who is playing with his string jumps at it, and offers a real nice price, and then when the orders have been accepted they are sent forward in their completed form, and this completion always adds something to the difficulties of filling them. The weak-kneed brother who grabs at this kind of business will never learn, and so long as he is allowed a string to his undertaking he cannot be caught, for he has made enough loops in his string that he can jump through them faster than any one can follow him. If he ships a greater number of cars than his string was attached to, of course they were old orders which he had on his books for a long time, and which he was in duty bound, as a man of reputation, to fill at the old rate. Were you ever there, brother? If all men are prevaricators, and we have it on good authority that they are, I do not wish to impute that all lumbermen are crooked or incapable. I know that such would not be supported by facts, and facts are the strongest support that any claim can have. Furthermore, it has not been my intention to deal in personalities in this letter, nor to point an incriminating finger at any one. I have no specific instances in mind to which I would point, and no other ambition impells me to write as I have done and am doing, except a wish to point out some of the weaknesses with which we are afflicted. If any person in our province or out of it finds anything in my remarks that fits them, or that they can make profitable use of, they are welcome to it. It is written for the common good of all, and with the hope that it will give offence to none.

And now let us pray that we may in future be delivered from the tempter's wiles so far that nothing may be offered to us that we cannot grab; that whatever we do grab may not work out to too great a loss if we did not have time to figure it carefully, or to get particulars, for fear that someone else would get on the wire ahead of us, and get the business from us. Let us console ourselves with the thought that we needed the business anyway, and that it really is not doing the other fellow any injury to get ahead of him, for quite likely he was bidding too low anyway to make the business of any real value to him. Let us forget the fact, and discharge from our memory for all time to come the thought that this business would be transacted just the same at a legitimate price if we only had the backbone to stand out for that price. Let us close our eyes to the fact that when the broker tries to impress upon us the desirability of any particular order, he may have interviewed others before us, and they may have quoted from experience. Let us believe that the broker has singled us out from amongst all the rest because he is interested in our welfare, and wants to see us prosper at the lowest possible prices. Let us forget that experience teaches us nothing unless we benefit by what it teaches.

Of course you have all read in the Book of Books where it says, "There is that which is crooked; who can make it straight?" And so if there is any crooked member in our fraternity who must go through life so, let us remember him, and offer him our sympathies. The way of the transgressor may be hard, but the way of a crooked man, if he must go through life so, must be harder.

Cold Weather Closes B. C. Coast Mills

Severe cold weather on the coast in B. C. which commenced shortly after Christmas has resulted in the closing of nearly all the mills and logging camps and has given quite a setback to the industry for the time being. Latest reports are that the snowfall has been very heavy making logging operations practically impossible, as most of the mills depend upon the logging camps for their continual supply of logs, the result has been the shutting down of the mills also. Many lumbermen see in this a blessing in disguise as it will have the effect of still further stiffening prices, which have already made substantial advances during the last few months.

Western Canada Agog with Optimism

Demand Increasing and Prices Advancing — Large Crops Create Good Trade—U.S. Orders Coming to Canada

Mr. Hugh A. Rose, eastern representative for the Canadian Western Lumber Company, of Fraser Mills, B. C., returned to Toronto on January 19th from his annual visit to the head office of the company at Fraser Mills. Speaking of trade conditions in eastern Canada, Mr. Rose had nothing but encouraging opinions to express. The demand for all kinds of B. C. timber, lumber, shingles, etc., has been increasing rapidly since the middle of last fall. This improvement has effected the whole industry and Mr. Rose states that every lumberman in western Canada is looking forward to a good season's trade during 1916.

There are several important factors that have brought about this improvement. One of the chief influences has been the enormous crop harvested in the prairie provinces last fall. The crop of 1915, as everyone knows, was abnormal, and it is hardly reasonable to expect that so great a crop will again be harvested in 1916. Every available farm hand was occupied late into the fall of 1915 in harvesting operations and in making shipments of the crop. The result is that there was, comparatively speaking, only a small amount of fall ploughing and there will, therefore, be a corresponding decrease in the acreage under cultivation for 1916 crops. In connection with the crop of 1915 there is apparently a serious problem before the country arising out of the extent of the crop as compared with the facilities for its movement. The indications at present are that, even with the three transcontinental railways, it will take the best part of a year, if not more than a year, before the last of the 1915 grain is shipped out of the west. This situation was recognized at an early date last fall by practically everybody in the west and the result was an immediate and widespread demand for lumber and timber to erect granaries so that the crops could be stored pending shipment. This was the commencement of the improved demand in the west. Shortly following this there came a great increase in the demand for lumber in the United States. This was caused by the great industrial activity in the first place by enormous war orders received by United States manufacturers. This put into circulation almost fabulous sums of money and it was followed quickly by an influence having an even greater and more direct effect upon the lumber industry, namely, the ordering of immense quantities of southern pine by the allied buyers for use in connection with the carrying on of the war.

Such an abnormal demand for lumber and so great a general increase in industrial activity naturally put an immediate and heavy strain upon the railroad companies which were driven into the market to secure lumber for car building material. In the course of a very few weeks it became apparent that the southern pine mills, driven to their utmost capacity, could not handle the great demand for lumber. Prices were rapidly advanced but the demand continued and in a short time the lumber mills in the Pacific Coast States began to receive the overflow orders. It was not long after this that even the Pacific Coast mills found themselves unable to handle all the orders coming their way. The demand has not only kept up, but has increased. The general industrial activity throughout the United States has led to the erection of warehouses and private homes to such an extent that practically every mill in the United States is now turning down business and many of the orders are flowing over into Canada.

British Columbia mills are today shipping extensive quantities of their product into the United States, bringing about a complete reversal of the situation of a few years ago, when United States mills were ruining the business of Canadian mills in the prairie provinces. Not only have the mills of B. C. been called upon to cater to United States trade, but some of the large spruce mills in the prairie provinces have been placed in a similar position. Several of these mills, which formerly were able to put their stocks into a few points in the middle west such as Chicago, and Minneapolis, are today shipping spruce right into New York city.

During January, the weather conditions on the Pacific have been unfavorable for manufacturing. Extreme cold has prevailed for several weeks and when Mr. Rose left B. C. he understood that there was scarcely a mill upon the Pacific Coast either in the United States or B. C. that was operating. This shutdown, of course, will only be of a very temporary nature, but when one considers the enormous producing capacity of the mills he will see that the effect upon trade conditions must be considerable. Moreover, this compulsory reduction in output has come at a time when stocks of lumber in all parts of the country are badly broken. Mr. Rose, during his trip to and from B. C., observed closely the conditions in the towns and cities through which he passed. He travelled by the Canadian Northern Railway and he reports that, practically everywhere, he saw retail yards in which the chief feature was the fence surrounding an almost vacant lot. The lumber piles had been reduced to practically nothing wherever he had an opportunity of making observations. De-

pendable reports which his firm had received from all parts of the country indicate that this condition is general.

Under all these circumstances it is natural that lumbermen in Western Canada should feel encouraged in regard to present conditions and the outlook. Mr. Rose says that he never came across in all his experience such remarkable optimism as prevails in the West today. No one will even listen to a suggestion of the possibility of anything but an enormous volume of business at splendid prices during 1916.

The closing down of the coast mills is the direct result of the heavy snow fall and cold weather in the logging camps. In B. C., the logging operations are carried on almost entirely by machinery and railroads. It is impossible to conduct these operations when the country is under a heavy blanket of snow. The mills count upon a continual inflow of logs from the woods, and when this is interrupted the production of lumber cannot continue. As the shutdown is universal no one mill is effected more than others. There is no fear of losing employees as there would be if one mill were closed and another running. The employees naturally remain and wait from day to day expecting the plants to be re-opened. The net result therefore is a great reduction in the volume of output which will naturally be an additional factor in stiffening prices. Prices on practically all lines of B. C. timber, lumber and shingles have increased considerably during the past few months and further advances are practically certain. The door trade situation in B. C. has been improving greatly of late, in a manner similar to the situation in connection with other lines of wood goods. Every door factory in fact from the California line north is loaded with orders, and prices have advanced from 5 to 7 points, or 28c to 35c per door in the last two months. This is due to several causes; increased demand, the increased cost of fir lumber and the scarcity of labor. The labor situation in B. C., partly as the result of the heavy enlistment for overseas service, has become acute.

One of the chief topics of discussion among the lumbermen of the Pacific Coast, Mr. Rose said, was the proposal of the Provincial Government to encourage the building of a number of Diesel engine schooners, as mentioned in recent issues of the Canada Lumberman. The proposition is being undertaken by a private company made up mostly of lumbermen, the understanding being that the Government will assist the undertaking by means of guarantees. Every lumberman who is interested in the export business today is also discussing the situation in connection with the Panama Canal and looking anxiously forward to the time when it will be re-opened for general traffic. It has been a severe blow to the industry upon the Coast that the Canal has not been available for shipments of late.

The Prairie Lumber Trade During 1915

Encouraging Conditions Growing Out of Several Years of Depression—Building Operations Increasing—Lessons Gathered from Adversity

There is no gainsaying the fact that during 1915 the lumbering and allied industries of Western Canada had a very quiet year. The war, of course, was the main cause, owing to the fact that the Prairie Provinces have hitherto obtained most of their money for railway building, municipal improvements and large engineering works from Europe. Another factor which made 1915 below the average was the poor grain crop of 1914. However, it should be noted that the entire year was not a dull one for the prairie lumbermen. Until September there was very little business obtainable except war orders, but during this month a sudden change came over the industry. About this time it became known that Western Canada had reaped its record crop—in fact two crops in one—it being estimated to value over $460,000,000. This naturally caused great optimism in all lines of business. At once there became a distinct revival in the lumber trade. The farmers began to pay their debts to the banker, to the government for their seed and grain, interest on mortgage loans, country store bills, machinery, and lumber bills.

Retail lumber dealers, who had been carrying extremely low stocks, began to stock up. This caused many mills, in order to meet this sudden demand, to start operations, and for many weeks the retailers were unable to obtain stock quick enough from the Coast and Mountain manufacturers to fill their orders. Most of these orders were for lumber for farm constructional purposes, to erect granaries, implement sheds and portable houses. Almost every dealer, consequent upon the huge demand for shiplap, six inch clear strips and dimensions, found himself cleared out of these commodities shortly after this revival, which continued until the end of November.

A strong advance occurred about November in prices in the yellow pine belt, occasioned by the large war orders which were given on account of the shorter ocean haul. This forced Eastern buyers, accustomed to having their requirements filled from the South, to place their orders on the Pacific Coast on both sides of the International boundary line. This factor, coupled with a shortage of stock, and the large number of mills closed down indefinitely, has caused a sharp advance in price by the manufacturers of all classes of lumber.

An encouraging feature of the review of the year's doings in the lumber trade in the Prairie Provinces is the fact that the years 1914 and 1915 have taught the lumbermen—both buyers and sellers—many lessons which can only be learned in the hard school of experience. One of these is in the matter of credits. The situation in this respect has materially improved in so far that the seller has discovered that it is just as important for him to give attention to getting paid for his material as it is for him to find a market in which to sell it. One large Winnipeg retail lumberman, when interviewed by the Winnipeg representative of the Canada Lumberman, said that the buyer has learned what it means to be in debt and to be obliged to sacrifice his holdings in a poor market in order to meet the demands of his creditors. This is one of the lessons which 1914 and 1915 have taught our Prairie lumbermen to remember. It is to be hoped that it will not require any further demonstration to make them see the folly of a loose credit policy.

A third point of interest in the retail lumber trade in the west is that many yards have been withdrawn from points where there was an over supply. This is a very important factor in weighing the pros and cons in the annual review of the lumber trade. This fact is one which should be entered upon the credit side of the ledger in estimating the losses and gains of the lumber trade of the Prairie Provinces for 1915.

It is difficult to forecast what is in store for the Prairie lumbermen for 1916. It appears certain that there will be more building than during 1915. To what degree this will materialize will depend very largely upon the extent to which the retailer may be disposed to throw open the "flood gates" of credit. It will, furthermore, depend to a great extent upon what attitude the banks find it possible to take in loaning money to farmers.

City building, however, will again be poor. In the country districts we cannot count upon much residential building in the larger towns, but we can, unquestionably, look forward to a brighter outlook in industrial building. Already there has been announced to be erected this spring a new bank building for the Bank of Hamilton at Winnipeg. One of the largest firms in Winnipeg is to erect a five-storey warehouse as soon as the weather moderates. Work will proceed on Winnipeg's new $13,500,000 aqueduct. $15,000,000 will be spent on road construction in Canada during 1916. On January 10 the Provincial Government of Manitoba sold bonds valued at almost $1,000,000 in New York. This money will be used for building purposes such as the finishing of the $4,500,000 legislative building at Winnipeg. At Regina a $1,000,000 oil refinery plant will be erected by the Imperial Oil Company. In Northern Alberta the sum of $10,000,000 will be spent this year on a scheme to develop a district lying between Athabasca and Fort Vermillion, a distance of 300 miles. The scheme includes the development of coal mines, the construction of a line of steamers for the Peace and Mackenzie Rivers, the manipulation of the by-products of minerals and other measures. It is anticipated that work will start early in the spring. Throughout Alberta, Manitoba and Saskatchewan new flour mills are being erected. Others will be started when the frost gets out of the ground. At Fort Frances, which, geographically is in Western Canada, there is to be constructed a new mill having a capacity of at least 2,000 barrels per day. All these construction features, which are only picked from many similar items, should undoubtedly tend to help the lumber trade in the Prairie Provinces.

In conclusion, there appears to be a great opportunity for the lumbermen of Western Canada to do a big business during 1916. The Prairie farmers will have plenty of money, and the volume of business possible is almost incalculable. They will erect dwellings, barns, sheds and outbuildings. A sign of what is forthcoming is shown by the fact that the Western Retail Lumbermen's Association recently issued 25,000 plan books of farm buildings and not one remains. A further issue, which has just been published, has been completely sold out.

After one of the worst periods of depression in the history of the lumber business of Western Canada it seems certain that the industry is now on the upgrade, and it is most probable that the spring of 1916 will see a distinct revival in the lumber industry of the Prairie Provinces.

In the Public Eye

A budget of comment on men and things of moment presented in the interest of our readers, independent of party politics and with malice toward no one.

Brigadier-General—pardon me, Sir Alexander—Bertram is off to summer lands in search, we are told, of new health, and hurling through the air in his direction goes a title. And surely no man ever tried so hard to earn the Government gratitude the title implies. Sir Alexander has loaded all the cares, crimes and virtues of the Shell Committee on his shoulders and tried to take them south with him. And the Government cares not where they go so long as they are out of sight and have any kind of a chance of being out of mind. But the public refuses to forget some things—and the Shell Committee is one of them. The public wants to know all about it, and is clamoring for an investigation so insistently and audibly that the Conservative party are hearing it even above the calls of party loyalty. That old-time Conservative organ the Hamilton Spectator is one of the latest to climb the fence and voice the sentiments of its subscribers. The Spectator hasn't made any half-way jump like the Ottawa Journal. It places the responsibility where it belongs—on the shoulders of the government. In an editorial dealing with the Shell Committee the Spectator says:

"Upon the Dominion Government rests the duty of setting on foot a most thorough and rigid investigation of its operations from beginning to end, and we cannot doubt that the ordaining of such an investigation will be regarded as one of the first tasks of Parliament at its approaching session."

How many more prominent Conservative journals will have to speak before Sir Robert Borden realizes that the machine oilers by whom he is surrounded do not voice the sentiments of the people?

* * *

Is Canada to receive no more shell contracts? This idea prevails in certain quarters. Still, it was only the other day that Lloyd George was appealing to the patriotism of Glasgow workmen. And that appeal surely carried a conviction that the Empire needs all the munitions her factories can make. Does it all mean that so far as munitions and munition contractors go Canada is not looked on as part of the Empire, but rather as a neutral country? Are our contractors put in the "cold business" class occupied largely by our Yankee cousins? Has Britain refused to forget that when men cried from the trenches for shells the Canadian manufacturer came forward with a dollar's worth of shell in one hand while the other was held out for $5.00? Are we to give our sons to the Empire by the half-million and yet to have a cold, hard, commercial rating that belies our loyalty? Is Canada as a whole to suffer that a few may become rich? These are questions we are not to ask. The answers might harm some of our alleged leaders. And we must be loyal to our leaders rather than to the Empire and the freedom the continuance of that Empire assures us.

* * *

"Three million dollars is the value of Manitoba Agricultural College buildings as they stand, including the site and furnishings, according to an official report made to the Government by the Canadian Appraisal Company of Montreal, appointed some time ago to make a valuation of the Provincial buildings. The Agricultural College cost the Province approximately four million, it was stated in Government circles. Where did the other million dollars go?"

Let me see, was not the Hon. Bob Rogers then Minister of Public Works?

* * *

The real test of sacrifice is now at hand. It comes not in the call for half a million men, but in the answering of that call. It comes when men who love not war but peace, not the blare of trumpets but the quiet fireside, are asked to prove that they love their country more than all else they hold dear in life. It comes when men are asked to give up good positions with the ease and comfort that accompany them, to serve as privates in the ranks—to face hardship and death, not for glory or love of excitement, but as their duty to that Empire that has guaranteed them liberty and the pursuit of a certain amount of happiness.

* * *

Nor has our business community yet learned the real meaning of rising to the occasion. Some lines of trade have been impaired by the war, but on the whole Canada is enjoying a very reasonable prosperity. We have given, some of us not over liberally, to the Red Cross Fund and the Patriotic Fund. But I venture to say that not one of us has been compelled to deprive himself to any serious extent in the giving, while most of us enjoy our usual comforts and luxuries in the same old way. It is no hardship to have to give half a loaf while the baker shop around the corner is still doing business and your bank account shows a goodly balance. It is when you have only one loaf and there is no more in sight that the giving hurts.

* * *

By the way, it looks from here as if Mr. Acton made an awful mess of that Hopkins clothing charge. He made his charge as bold as any lion and then when he got in front of Sir Charles Davidson he wanted to apologize so hard that he hired a lawyer to help him do it. He was evidently so unused to court procedure that he became nervous and engaged a lawyer even more nervous than himself. It never occurred to either of them to ask to have Hopkins' Toronto partner called for examination. To be sure he is a silent partner, but who knows but that the commission might have induced him to break his silence. There was Hopkins' bank account. Might that not have thrown some light on what happened to Hopkins in connection with one or more contracts that seem to have got tangled up with his real estate business. It might have shown where the money came from that is keeping Mr Hopkins in New York. Or, if Mr. Hopkins' silent partner had been called might he not have been able to explain just why Mr. Hopkins had at this somewhat inconvenient season ceased to bother about clothing contracts and taken such an extended vacation. Mr. Acton either went too far or not far enough. He should never have put his charge in print unless he intended to fight it all the way through. The sudden fright he developed reflects credit neither on himself nor on the trade press.

* * *

There has been so much Bertram in this column that some of his friends accuse me of harboring a grudge against the doughty knight. But far be this from the fact. I regret to report that previous to the appointment of the Shell Committee I did not know there was such a person as Sir Alexander on this fertile continent. But you will readily admit there has been much Bertram in the Shell Committee. According to his own modest statement he was simply all of it. He let the contracts and saved the money. Others had been appointed by the Government to assist him in this great work, but he wanted it well done, so he did it himself. Others might be swayed by personal preferences or outside influences. Of himself only was he sure. He burned the midnight oil and wore himself out in health that the Empire might live. We know he did, for he has told us so himself. Consequently, when you discuss the Shell Committee you must discuss Sir Alexander Bertram. All we ever asked for him was fair play—a full and free investigation that would show the grand work he has done for the Empire to which we belong and for Sir Sam Hughes, possibly the greatest of its citizens.

* * *

"We must take steps," said Mr. Walter Runciman, in the Imperial Parliament, "to see that Germany is unable to carry on a trade war against the entente allies after peace is signed." And it is pertinent to ask what Canada is doing in this connection. The allies are so busy whipping Germany into submission that they have little time for after-war plans. But no matter how badly the Teutons are beaten they will emerge from the war with their business organization unimpaired. They will be ready to jump in and command the world's markets the day peace is signed. They must have on hand a tremendous amount of manufactures for which the British fleet has prevented them finding a market. Once the seas are open the Germans will be busy. And the only way to curb their commercial invasion of the allied countries is to build a tariff wall around the central powers. Make it so high and strong that German trade aggressiveness will be held in check till the allies have had time to organize their commercial forces. This defensive measure is necessary from a military as well as a commercial standpoint. For so sure as Germany's commercial campaign is assured, just so soon will she proceed to prepare for another military onslaught on the world.

* * *

A national coal strike is threatened in Great Britain if conscription is put into effect. The Welsh Federation of Coal Miners, by a vote of 163 to 82, adopted a resolution in favor of a walk-out of miners in England, Wales and Scotland, if compulsory military service is inaugurated. If Lloyd George were the strong man his followers would have us believe he would take the leaders of these miners out and shoot them.

* * *

The Minister of Militia has asked that "men of standing in business, professional or mechanical life, will send their names to him." He conveys the idea he wants them as officers for he is further quoted as saying: "We want to know who is who before we make appointments or permit the raising of any new regiments under new auspices." But naturally the question arises as to whether the Minister means what he says or is simply making a bluff to cover some of the practices that have hitherto governed the appointment of officers.

Now if Sir Sam was as frank as he is loquacious would he not have wound up his statement with "only those having political influence need apply." For the past has shown that numbers of officers have been chosen not because of their fitness or capacity but for the amount of political pull they can develop. There are hundreds of incapable Canadian officers now stalled in England, so I am told. They may easily be found around the Savoy Hotel in London, having a good time at the expense of the Canadian taxpayer. With

rare exceptions the efficient have reached the front. They have helped cover Canada's name with glory. But thank heaven that every officer whose pull and influence secured him an appointment has not been allowed to reach France.

* * *

But why should this sort of thing be permitted in a country that is partially intelligent, more or less free and inclined to be democratic? Why should we be the victims of a party system that is all the more contemptible because it is half hidden under a cloak of hypocrisy? If "to the victor belongs the spoils" is to be the party system of this young country let us be open and above-board about it. Let us not fool ourselves with the idea that government is being carried on by the people for the people but announce to the world that our government is by the party for the party. In short, if we are to have a patronage system, give us one of the good old Yankee variety, where every office holder pays tithes to the party and knows the costs of a job beforehand. They make no bones about it. This sneaking method of pretending virtue while practising deceit fills us with disgust.

* * *

Canada has now more than a hundred knights—more than could find place at King Arthur's famous round table. She also has a minor aristocracy made up of honorary colonels, etc. And while the wearers are doubtless proud of their titles it is doubtful if even those who have honestly earned them are more respected because of them. There are others of course who hang to a rather precarious fame by the handle their title affords. But great Canadians do not require a title to keep their memory green in the minds of their country; others who have been "honored" by their country or rather by their party, do not receive more respect because they have been hung on a hook a trifle above the democracy that is the backbone of every new country. Sir John A. Macdonald is still "John A." to the men who loved and followed him; Alexander MacKenzie still holds a place in Liberal hearts that will never be attained by many a man who has been "decorated by his King." If titles have any value at all in Canada it is because they foster democracy. The man who refuses a title is a **patriot;** the man who accepts one is often more or less of a joke.

* * *

The same government which pays 5½ per cent. interest on war bonds keeps the rate of interest on post office savings at 3 per cent. Does said government wish to convey the impression that its bonds are twice as great a risk as money in the post office, or is it merely trying to create a market by offering bonds at bargain prices? Surely the government wants the people to save. Why not pay them a more attractive rate of interest till they have saved enough to invest in bonds? Why not encourage thrift among our people?

* * *

Will the Minister of Militia deny that he is directly or indirectly financially interested in the Ross Rifle Company?

* * *

The Shell Committee, its alleged crimes and self-asserted virtues, has been brought before Parliament by Dr. Pugsley, a Liberal statesman who has probably been taught that he who is without sin should throw the first stone. It is to be regretted that what should be only a business proposition is thus being made more and more of a political question. It is unfortunate that Sir Robert Borden failed to listen to the voice of the more independent of the Conservative press and order a full and free investigation into the workings of that committee. If there was nothing to hide he had nothing to lose. If there was something to hide a full investigation ordered by himself would free him from all blame and responsibility. Dr. Pugsley has made so many charges, though insignificant in comparison to the real facts, that an investigation should follow and if any or all of the charges are sustained the Government must share responsibility with the Shell Committee and the profiteers I have felt from the first that such an investigation was necessary for the protection of the manufacturing interests of Canada and with me those interests come before the political welfare of Sir Robert Borden, whom in many ways I admire.

* * *

In a recent issue, concerning shell committee charges, the Montreal Star, (Con.) says:

"In any case, the Government cannot permit these shocking and humiliating charges to remain uninvestigated."

* * *

After a long silence the peeved voice of the Opposition Leader is again heard in the land. He should be ashamed to criticize the Government, even if they deserve it. He has waved the British flag, he has told us what a great Britisher he is, but he has failed to live up to it. What is he doing to induce his countrymen to play their part in the cause of freedom? Is his a "soul so dead" that he cannot at least keep those of his own kidney, like Bourassa and Lavergne and Croquette quiet?

* * *

When are we going to get some information concerning the Ross Rifle? Rumors suggest that after the disastrous fight at Langmarck the British Government made a report to Ottawa concerning the rifle. If so, why is this report not made public?

SEARCHLIGHT.

Personal Paragraphs

Mr. Arthur H. Campbell, of the Campbell-McLaurin Lumber Company Limited, Montreal, has been appointed a member of the Transportation Committee of the Montreal Board of Trade.

Mr. Duncan McLaren of the Union Lumber Company, Toronto, recently underwent an operation and has been confined to the hospital for a few weeks. His many friends will be pleased to learn that he is making satisfactory progress towards a complete recovery.

At a recent meeting of the directors of The Shevlin Company, a holding concern for the stocks of the various Shevlin-Carpenter-Clarke Companies in Minnesota, Ontario and the west, Elbert L. Carpenter was elected president to succeed the late Thomas L. Shevlin, and Hovey C. Clarke was chosen vice-president.

The Canadian Western Lumber Company is increasing its selling force in Eastern Canada by appointing a representative at Montreal in the person of Mr. R. H. Underhill who will cover Quebec province under the direction of the Eastern sales office at Toronto. Mr. Underhill formerly covered Western Manitoba for the Canadian Western Lumber Company.

The many friends of Mr. J. Douglas Moir, of Wm. Whitmer & Sons Inc., will be glad to hear that he passed the crisis in a very acute attack of pneumonia on Monday January 24th at St. Luke's Hospital, Ottawa, Ont. Mr. Moir left New York on the sleeper on Sunday, January 16th to attend the 8th Annual Meeting of the Canadian Lumbermen's Association and was taken ill suddenly on the way up. He was conveyed from the Chateau Laurier to the hospital by ambulance shortly after his arrival. It will be two full weeks or more before Mr. Moir will be able to return to New York."

Campbell & Johnson Dissolved—New Firms Formed

The firm of Campbell and Johnson, Traders Bank Bldg., Toronto, one of the best known wholesale lumber firms in Ontario is being dissolved by mutual arrangement of its members. Two of the members of this firm, Messrs. J. L. Campbell and W. G. Paynes are entering upon the lumber business in partnership under the firm name of Campbell and Paynes. Mr. J. P. Johnson and his son Mr. A. K. Johnson will also open offices in the Traders Bank Bldg., at an early date and carry on a wholesale lumber business.

Messrs. Campbell and Paynes will continue to occupy the offices formerly occupied by Campbell and Johnson at 1521-22 Traders Bank Bldg., Toronto. The character of the business carried on by them will be the same as that heretofore carried on by Campbell and Johnson, namely, a wholesale lumber business, dealing especially in eastern Canadian woods and B. C. shingles and lumber.

Mr. J. L. Campbell is one of the best known wholesale lumber dealers in Ontario. Before coming to Toronto he was in business for a number of years in the west and still retains his connection with the firm of Campbell and Ferguson, Melita, Man., a progressive retail lumber and hardware business. Mr. Campbell started business in Toronto in 1907 with the firm of Campbell and Carman which was shortly afterwards succeeded by the firm of Campbell and Johnson. Six years ago the firm took Mr. W. G. Paynes into membership. He has been a member of the firm ever since. The new firm of Campbell and Paynes will be represented on the road throughout Eastern and Western Ontario by Mr. W. G. Paynes and Mr. J. L. McCormack of Brantford, Ont.

Abitibi Pulp and Paper Company's Progress

According to a statement by Mr. F. H. Anson, president, the Abitibi Pulp and Paper Company, now employs 800 men in the pulp and paper mills and about 2,400 in logging operations. During the summer 1,500 men are engaged in the mills and in the woods. Of this number 1,000 are employed at Iroquois Falls, where a model town has been established. The buildings include rooming houses, cafe, hotel, and 45 employees' dwellings, and it is proposed to construct 55 additional dwellings. The output of newsprint totals 215 tons per day, most of it going to the United States, and it is expected that the company will soon be turning out 225 tons per day. Mr. Anson states that the mills have proved to be efficient in every respect. Of the 25,000 horse power generated by the company at Iroquois Falls, 22,000 horse power is now being utilized, and the balance will be required when the maximum output of the mills is reached. The company is manufacturing 250 tons of ground wood and 50 tons of sulphite.

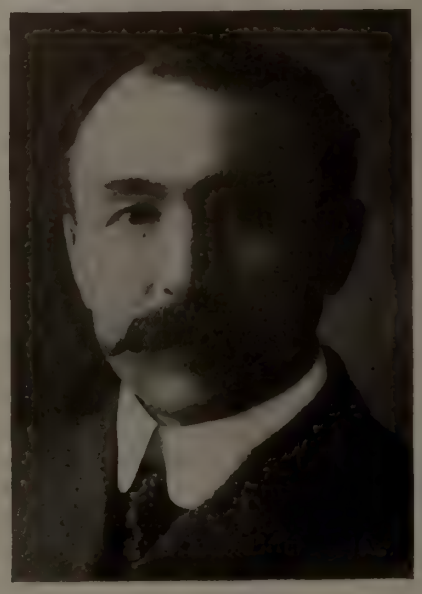
Forty-six vessels sailed from the port of Dalhousie, N. B., during 1915, carrying 17 million feet of deals, etc., 21,575 cords of pulpwood and 3 million laths.

Mr. P. D. Gordon, of Mason, Gordon and Company, Montreal, has been appointed treasurer of the Montreal Board of Trade.

Eighth Annual Meeting of the C. L. A.

W. E. Bigwood, Toronto, Elected President—Important Resolutions Carried—Officers for the Current Year

W. E. Bigwood, Toronto, the new President.



Senator George Gordon, Cache Bay, the retiring President.

The eighth annual meeting of the Canadian Lumbermen's Association was held at Ottawa, in the Chateau Laurier, on Wednesday, January 19th. One of the chief events of interest of the meeting was the reading of the president's address. The report referred to the fact that, notwithstanding the abnormal situation brought about by the war, trade conditions in Canada could not be called desperate. Reports of various recent annual bank meetings indicated that Canadian finances were on a solid foundation. Referring to the lumber trade the report stated that for some months past articles had appeared in the press regarding the enormous quantities of lumber that are being consumed at present by the allies and the possibility of disposing of still further tremendous quantities of lumber, portable houses, etc. Other reports had been published regarding the presence in Canada of alleged representatives of the Belgian and French Governments looking towards the placing of large contracts for lumber, etc. In every instance careful enquiry had been made by the Association, and so far they had yet to learn of any duly authorized representatives of these governments being in Canada.

The serious difficulty in regard to this branch of the business was the prohibitive freight rates for ocean transport. The president referred in detail to the situation in regard to tonnage but was unable to afford any definite encouragement in this regard.

Referring to the work of the Association the report stated that the time had now been reached when they must decide whether they should further develop various branches of their activities.

The report of the treasurer showed that the Association had had a successful financial year, coming through it with a substantial credit balance.

The report of the Executive Committee stated that there was a very strong feeling that the trade report branch of the Association should be developed to its full capacity, somewhat on the lines of the trade report branch of the National Association. To carry this out it would of course be necessary to increase the staff of the Association. The executive also asked that the Association should be authorized to develop the work of collecting claims or debts.

Reference was made to the importance of seeking the co-operation of architects in promoting the use of wood. The secretary of the Association had been in Toronto recently and had been invited to attend a luncheon of the Lumbermen's Section of the Toronto Board of Trade, at which there was a discussion regarding a proposal of the Toronto city architect that lumbermen should assist in securing proper consideration for lumber in proposed new city by-laws. In connection with the Forestry Branch of the Department of the Interior, the report stated, tests were being made at McGill University in order to establish statistics regarding the strengths of all kinds of timber. This was a most important step in the interests of the lumber industry of Canada.

An interesting reference was made to wood block paving, and the fact that most of the business in this line had gone to longleaf pine. Investigation, however, had shown that Canadian Norway pine was as good as, or better than any other wood for this purpose.

The committee also suggested the advisability of organizing a campaign for the advertising of lumber as against substitutes for wood.

The report of the committee on transportation dealt extensively with matters which had been under consideration throughout the year, such as ocean freight rates and the eastern freight rate case.

Secretary's Report

The secretary's report showed that Canada's imports of merchandise (not including coin and bullion) during the twelve months ending November 30th, were as follows:—

1913	$665,196,828
1914	495,935,908
1915	435,342,586

or a total reduction in the two years of nearly $230,000,000. Exports on the other hand were as follows:—

1913	$419,362,646
1914	397,905,887
1915	559,152,052

or an increase in the two years of $139,789,406. In the two years Canada had therefore improved her position by $369,643,648.

Exports of products of the forest for the same periods were as follows:

1913	$42,875,089
1914	41,954,640
1915	48,925,230

Officers for 1916

The election of officers for the year 1916 resulted as follows:—Hon President, J. R. Booth, Ottawa; President, W. E. Bigwood, Toronto; 1st Vice-President, Angus McLean, Bathurst, N.B.; 2nd Vice-President, Arthur H. Campbell, Montreal; Hon. Treasurer, R. G. Cameron, Ottawa; Directors: The Hon. Geo. Gordon, E. A. Dunlop, E. R. Bremner, W. C. Laidlaw, R. C. Walker, Duncan McLaren, A. E. Craig, Gordon C. Edwards, W. E. Bigwood, W. J. Lovering, His Hon. Sir. D. C. Cameron, K C M G., A. L. Mattes, Angus McLean, Arthur H. Campbell, George W. Grier, Alex. McLaurin, W. G. Power, W. C. Hughson, J. B. White, John Hendry.

A number of resolutions were carried, among them being the following:—

To take such action as is necessary in connection with the approaching visit of premiers and cabinet ministers from Australia and New Zealand, and also in connection with the proposed Imperial Trade Conference which may be held shortly in England;

To take such action as is necessary in connection with the probable enquiries from Great Britain and the allied nations for lumber, timber, portable houses, etc.;

To assist the "Economic and Development Commission" in every way possible;

To communicate with engineers in all cities, towns and municipalities urging the use of Canadian woods, particularly for wood block pavements.

A resolution was also passed by the Association to appoint a committee of three members to look into the question of insurance on lumber mills. It is expected that the outcome will be the formation of an insurance organization among Canadian lumbermen.

In the evening a joint banquet was held by the Association and by the Commission of Conservation, the Canadian Forestry Association and the Canadian Society of Forest Engineers. The banquet was exceptionally interesting and successful. The speakers of the evening were:—Hon. Sir Geo. E. Foster, Rt. Hon. Sir Wilfrid Laurier, Hon. Dr. Roche, Dr. Michael Clark, Dr. F. D. Adams, Dean of Science, McGill University, Attorney-General Daniels of Nova Scotia.

Quebec Spruce Deal Stocks Heavy

Editor Canada Lumberman:—

The demand for spoolwood is good owing simply to the thread manufacturers being unable to secure their usual supplies in Europe via the Baltic. We do not look for it to continue after the war is settled.

Large stocks of 3 in. spruce are on hand in all the yards. The output this winter will be reduced to some extent. Prices are about the same as in 1915.

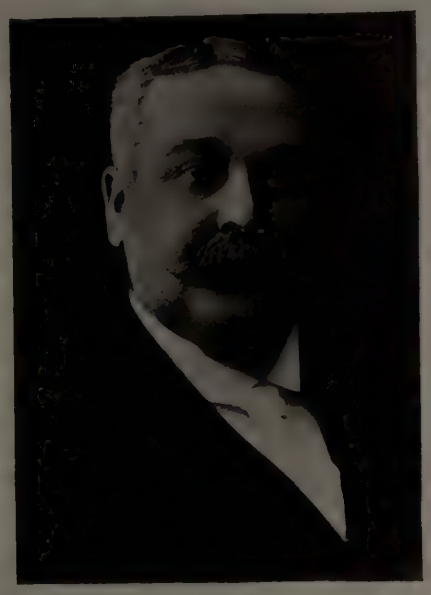
Stocks of planks and boards are heavy. A very small quantity was moved last season, and prices are low. This refers to narrow widths sawn after cutting the 3 in. We expect that the market will improve in the United States this summer.

Ocean freights are a much unknown quantity. Buyers are leaving now to charter in Great Britain.—Quebec manufacturer.

Toronto Lumbermen Annual Meeting

Board of Trade section elect officers for 1916—Retiring chairman's interesting address

G. W. Boake, the new Chairman



J. L. Campbell, the retiring Chairman

The annual meeting of the Lumbermen's Section of the Toronto Board of Trade was held on January 17th and was largely attended. The chief item of business for the meeting was the election of officers, which resulted as follows:—chairman, Mr. G. W. Boake, of the Boake Mfg. Company; vice-chairman, J. B. Reid, of Reid & Company; executive committee, A. E. Clark, T. H. Hancock, T. E. Rathbone, A. E. Eckardt and C. W. Wilkinson; secretary and treasurer, H. Boultbee; programme committee, J. L. Campbell, A. E. Eckardt, W. J. Lovering and H. Boultbee.

An amendment to the by-laws was carried so as to provide that in future the annual meeting of the Section will be held on the first Friday in the year instead of the third Monday as formerly. This change was made so as to prevent the annual meeting from clashing with that of the Board of Trade.

Retiring Chairman's Address

The retiring chairman, Mr. J. L. Campbell, delivered a short address, opening with an expression of the appreciation which he felt at having been president of the Lumbermen's Section of the Toronto Board of Trade during the past year. Such work as it had involved on his part had been entirely a labor of love. The part he had enjoyed most of all was the social feature of the meetings of the Section. These meetings had given him an opportunity of meeting the other lumbermen of the city and of coming into close contact with them, which he had found to be very much to his advantage. There had been other important advantages also. The Section had been able to discuss many questions of mutual interest to the members from a business point of view. Mr. Campbell felt that possibly the members did not yet realize the advantages of association, provided by such an organization as the Lumbermen's Section. It was a good thing, not only to have an opportunity to discuss business questions, but also an opportunity to get together and become well acquainted with one another. In all business there was a great deal of competition and the impressions which men were likely to form of one another under the strain of competition were liable to be very diverse. On the other hand, if they had the opportunity of meeting one another socially they were certain to find out that the other fellow was not such a bad fellow after all. Social intercourse among business men promoted to a large extent a greater feeling of satisfaction and mutual confidence, which was after all, a most valuable asset in all business relationships. Business was conducted almost entirely on the basis of confidence. If by meeting together they could improve the confidence existing between themselves, their meetings were sure to be of great value.

In regard to the actual benefits derived from the Lumbermen's Section of the Board of Trade, these, on the surface might not appear to have been very extensive. The Section might not have accomplished a great deal in definite results. It had, however, accomplished a few things which he had already mentioned and in addition it had inaugurated a movement which had lead to the creation of a Lumbermen's Credit Bureau among the retail trade in Toronto, which would prove of great advantage to its members and, inasmuch as it enabled the retailers to place their business upon a more practical and a safer basis, it would be a corresponding benefit to the wholesalers.

In addition, the lumbermen now formed a part of the Toronto Board of Trade. Mr. Campbell felt that possibly they were inclined to under-estimate the value of such an institution as the Board of Trade. The services of the Board of Trade to its members were indeed of great importance. Large questions of general interest to the business men of the city were continually coming up and only through the co-operative action of a Board of Trade could they be handled to mutual advantage. Such questions as those regarding freight rates, and transportation matters in general were continually coming up for consideration and the only watch dog the business men of the city had was the Board of Trade. He believed that the Toroto Board of Trade had looked after its work in these lines very well. As an example, there had come up last year the important question of sanitation of railway cattle cars. The railway companies had wanted to charge $3.50 per car for this service. The Toronto Board of Trade had taken the matter up and brought about a reduction in the charge to 75c, thereby effecting a very great saving to the whole Dominion.

The Board of Trade had been the only body in Toronto that had had an eye to the Hydro-Electric By-law when it was submitted to the citizens for a vote. This by-law may have been a good thing or a bad thing. He thought that in principle it was a good thing. The Board of Trade, however, had been able to discover that certain things in connection with the by-law had been done in a slipshod manner. For instance, the by-law had been passed through the City Council without being considered clause by clause. He mentioned this merely to show that the City Council passed a good deal of loose legislation for which the people of the city had to pay the piper and it was a good thing, therefore, to have a watchful Board of Trade which would at least make an effort to protect the citizens' interests. The fact that the Hydro Electric by-law had been handled by the City Council in a slipshod manner was evidenced by Sir Adam Beck's promise to bring in legislation in the Ontario Legislature to overcome the weak points in the by-law. If the Board of Trade had not been on the watch this would not have been done and the by-law would have been sanctioned by the people without Sir Adam Beck's additional guarantee.

If the Board of Trade was thus able to demonstrate its usefulness to the citizens of Toronto it was their duty to support it and it was the duty of the lumbermen to do their share towards its maintenance. The Lumbermen's Section of the Board of Trade might not have been of any great benefit to the Board, but he thought that the influence which it had exerted was of a cumulative nature and had been appreciated by the Board itself.

In conclusion Mr. Campbell repeated his appreciation of the honor he had felt in acting as president of the Section during the year and expressed his hope that during the coming year the Lumbermen's Section would increase in members, usefulness and influence.

On motion of Mr. A. E. Clark, seconded by Mr. G. W. Boake, a vote of thanks to Mr. Campbell for his very capable and successful work as chairman during the year was unanimously carried.

Mr. Campbell then retired in favor of the new chairman Mr. G. W. Boake who conducted the rest of the meeting.

The Board of Trade elections resulted in two candidates nominated by the Lumbermen's Section being elected. These were Mr. J. B. Reid, elected by acclamation upon the Board of Arbitration, and Mr. Walter C. Laidlaw, elected as a representative upon the National Exhibition Association.

Better Trade Conditions in United States

R. S. Kellogg, secretary of the National Lumber Manufacturers Association in a report upon the trade during 1915, says:—"The close of the year 1915 finds the lumber industry of the United States emerging from a long period of depression—a longer one, perhaps, than that passed through by most of the other leading industries of the country. The immediate cause of this depression was the European war, which, for a time, cut off practically all export trade, and also, by reflex action upon the other industries in the United States, brought about a heavy falling off in the domestic demand for forest products in almost every form.

"Beginning last September, heavy foreign orders for lumber were placed in the South; the railroads which had been out of the market for a long time, came in with large requirements for car repairing and car building, which have been steadily maintained, while an exceptionally open fall facilitated building operations throughout the United States on an unusually extensive scale.

"From the middle of March, 1913, until the first of September, 1915, lumber production throughout the United States averaged greater than lumber shipments, with an inevitable increase of stocks on hand and a weakening of the market. Since the first of September conditions have been reversed. Lumber shipments have steadily exceeded lumber production. Stocks are being reduced to a normal basis, and prices are again getting upon a better foundation. Whether this in turn will lead to overproduction and demoralization as in the past remains to be seen."

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Wanted–Lumber

Wanted good sound Basswood logs, 12 in. and over in diameter. Quote best price F.O.B. cars. Apply Hay & Company, Limited, Woodstock, Ont. 3-6

WANTED—Four cars 1-in. No. 2 Common and Better Hard Maple. State when cut, lengths, widths, and price, with Toronto Freight rate. Box 286, Canada Lumberman, Toronto, Ont. 2-5

Business Opportunity

Make your opportunity knock at the door of every Lumberman in Canada by placing a small "Ad" about it in this column. Our rate is $2.10 per inch per issue. Now is a time when monied men are seeking good bargains. What have you to offer? 1-t.f.

Miscellaneous

Automobile for Exchange

We have a "Light Six" Chandler, 1915 model, electric light, self starter, and all up-to-date equipment, in good condition. Cost new $2,350. Will sell in exchange for lumber, any kind of lumber, dead cull and better, and will make a big cut in the price of the car. J. & W. Duncan, Limited, 1801 Ontario East, Montreal. 24-3

A Chance to Make Money on a Timber Limit

Newfoundland timber limit, 112 square miles, well situated right on railway and within several miles of ocean shipping port; will average nine cords pulp wood and two thousand saw logs per acre, spruce and pine. Present demand for pulp wood and with duty removed by Newfoundland Government, makes this an exceptional opportunity for investment at a minimum of outlay. The demand occasioned by the war and the proposed embargo on pulp by Sweden will make a timber limit about as valuable as a gold mine. Particulars from Box 277, Canada Lumberman, Toronto, Ont. 1-4

For you can be sure their transactions with you will not end when they have closed the business your single ad. announced.

They Profit Most Who Serve Best

The brief but forcible maxim heading this article is taken from the creed or other official utterance of the Rotary Club, an international association of successful business men. Its brevity and its simple truth are consciously or unconsciously acknowledged by all progressive business men. It appealed so strongly to a well-known wholesale lumber firm of Toronto, that they have unofficially accepted it as their business guide.

Toronto's wholesale lumber trade includes many men whose business principles are based upon the same idea, and it would not do to single out anyone of them as having a monopoly of appreciation of the profits derived from good service. One of the younger firms, however, that of Terry and Gordon, belong so definitely to this class that we need not apologize for saying a few nice things about them.

The firm of Terry and Gordon, of Toronto and Vancouver, confine their activities largely to the distributing of building lumber, lath and shingles.

A word about the personnel of this firm:—In 1901 Mr. H. J. Terry left the employ of the Dominion Radiation Co. and joined the staff of Mr. C. A. Larkin as travelling salesman. He showed exceptional ability in this field of endeavor and rapidly gained a thorough knowledge of the wholesale lumber business. In 1907 Mr. Terry severed his connection with Mr. Larkin and commenced business on his own account in partnership with Mr. J. K. Muir of St. Catharines, under the firm name of Muir and Terry. Through careful management and hard work this firm made substantial progress from the start.

On January 1st, 1911, Mr. A. E. Gordon joined the forces of the firm as a partner, and the firm name was changed to Muir, Terry & Gordon. Mr. Gordon brought with him a wide and successful experience in the lumber trade. Commencing with Mr. John H. Eyer in 1899 as bookkeeper and later as inspector, salesman and assistant manager, Mr. Gordon obtained a thorough training in all branches of the business. On January 1st, 1909, he severed his connection with Mr. Eyer to enter a wider field of experience as sales manager of the Ontario Lumber Co. Toronto, continuing there till he entered the firm of Muir, Terry & Gordon.

For four years this partnership continued, handling a greatly increased volume of business. On January 1st, 1915, Mr. Muir retired, the business being continued under the firm name of Terry & Gordon.

In March 1915, Messrs. Terry & Gordon opened a branch buying office in Vancouver, B.C., under the management of Mr. Frank W. Gordon a brother of Mr. A. E. Gordon. Mr. Frank Gordon's advent to the firm's forces brought an additional asset in the form of eight years' practical experience in the lumber business in Ontario and British Columbia.

In 1915 Terry & Gordon also added to their staff Mr. Frank A. Kirkpatrick whose long and successful experience as a practical lumber salesman is well known to the trade; also Mr. Ernest P. Sharpe who is fast coming into the front ranks as a successful and reliable salesman.

The firm are represented in Northern Ontario by Mr. Bert Morrison a thoroughly competent inspector and bushman of long experience, also Mr. W. D. Watt a sterling knight of the lumber rule.

Mr. Clarke Allen has held the position of accountant and office manager for the firm since January 1st 1912, having previously served The Rathbun Co. of Deseronto for twenty years as accountant and their successors Taylor & Green (now Jas. Taylor & Son) of Gananoque, as manager for four years.

As well as handling large quantities of the products of Ontario and Quebec forests, the firm are specializing in all British Columbia wood products, representing exclusively The British Columbia Timber and Trading Co., as well as several other prominent saw and shingle manufacturers of British Columbia, in Ontario.

The policy of this firm is an absolutely square deal to every man, and honest, wide-awake, and efficient service. They enter the year 1916 with every prospect of making a record turnover of satisfactory business handled, despite the somewhat depressed conditions brought about by the war.

The Canada Lumberman wishes them every success in their work.

Mr. A. Brostedt, district freight and passenger agent for the Canadian Northern Railway Company at Vancouver, B. C., in a recent interview said:—"Following the giant wheat crop and prosperity generally throughout the prairies, there is already a considerable demand for shingles and lumber. This should increase by spring into a good healthy trade. Between Chilliwack and Hope, on our line, several small shingle and lumber mills have been established, and these are now doing considerable cutting and are shipping to the prairie markets. Some 500 miles of new lines have been opened up by the Canadian Northern in the Northwest. There are many homesteaders in these newly-opened sections, who will require material which can be supplied in this province."

Review of Current Trade Conditions

Ontario

Trade conditions continue quiet throughout Ontario. In the large cities there is very little likelihood of any extensive building operations during the coming year, although there is a likelihood that the amount of money spent upon new buildings will be greater this year than last. No one at present seems to know what to expect in connection with the demand for such lines as are needed for war materials. The shell box situation has become very uncertain. New orders are not being given out to any great extent and shipments upon old orders are not being asked for rapidly. Of course, this situation will depend largely upon the activities of the opposing forces in Europe during the coming summer and it is quite within the bounds of possibility that a great demand for shell boxes will develop in the near future.

Reports from retail firms indicate a fair spring business. Stocks have been allowed to dwindle almost to nothing in a great many cases, and with a fair demand from the farmers there is sure to be some improvement in the retail situation.

The lath situation in Ontario is very strong. The production of lath last year was light, and while the demand in Ontario is not active there is a good demand in the Northern States. This is using up a lot of Ontario lath.

Present indications are that the consumption of Ontario lumber in the United States will continue good, as a result of the high prices now prevailing for yellow pine. It looks as though the Northern States will take enough of our lumber during 1916 to keep prices fairly steady. There is a good demand for Canadian hemlock at points in the Northern States. Hardwoods continue firm. The volume of trade is fair and in some lines, such as birch, the demand is very strong and stocks are light.

Eastern Canada

The volume of business at Montreal is light. Building operations are at a standstill and shell box manufacturers are producing only on a limited scale. Prices are steady. The trade with the United States is satisfactory and the outlook is good. Large orders for spruce have recently been put through at good increases in prices.

Nova Scotia's products during 1915 according to an estimate by the Halifax morning Chronicle amounted in value to $124,622,658. The value of the products of the forest is estimated at $4,600,000.

Prices of eastern spruce at Boston continue firm, the base price for frames being $26. Random quotations are also firmer, but orders are not quite so numerous. Recent prices have been: 2 x 3, $21; 2 x 4, $22; 2 x 5, 2 x 6 and 2 x 7, $21 to $21.50; 2 x 8, $24.50 to $25; 2 x 10, $25.50 to $26; 2 x 12, $26.50 to $27. A striking improvement is reported for northern and eastern boards. First class covering boards 5 in. and up wide, 8 ft. and up long, are quoted at $22, but fairly satisfactory boards are still to be had for $21. The best matched boards 10, 12, 14 and 16 ft. are bringing $25, with $23 and $24 for stocks not quite so good. The demand for shingles at Boston is quiet. Prices are easy. Good white cedar extras are bringing $3.30 to $3.40, and clears $2.90 to $3. Red cedar shingles remain fairly firm, but the enquiry has slackened off to some extent. The best brands of extras are bringing $3.48. Lath are fairly active at $4.15 to $4.25 for 1⅝-in. For 1½-in. the usual price is $3.75.

Great Britain

Business was much restricted on the spot market in London during the first two weeks in January, on account of the small quantity of stock on hand and the likelihood of very restricted arrivals. Only a few small parcels were expected from Canadian ports. Values continue on the up grade for everything and tonnage is scarcer than ever. Very little forward business is in progress. Deliveries at London docks for the week ending January 1st amounted to 2,913 standards, as compared with 5,432 standards during the corresponding week a year ago. At Foy, Morgan and Company's recent auction sale 3 x 3 dry unsorted St. John spruce 9/20 sold at £17 10s.

At Liverpool, there is a strong demand for all kinds of birch, and today's prices of both Halifax and Quebec are considerably advanced over those of even a month ago. Much the same thing applies to pine, stocks of which are limited, and fancy prices are talked of both for logs and planks for next season's shipments. Since the beginning of the year spruce prices have continued to advance and have reached figures higher than anything ever recorded previously, while still higher prices are asked for stocks now offering. This condition is likely to continue. The spot market at Liverpool continues firm and further advances are expected. If the present rate of consumption continues many buyers will have to come into the market who will realize that delays are expensive.

The trade at Manchester is a little quieter and is confined largely to those firms which are engaged on war contracts. Prices continue in favor of holders and are approximately as follows for spruce deals: 3 in. x 11 in., at £27; 3 in. x 9 in., at £24; 3 in. x 8 in., at £23; 3 in. x 7 in., at £22; 3 in. x 4 in. to 6 in., at £21 10s. A year ago the prices were as follows: 3 in. x 11 in., at £12 10s.; 3 in. x 9 in. and 10 in., at £11 10s.; 3 in. x 7 in., at $10 5s. All ex quay Manchester. The trade at Glasgow continues quiet. Stocks of all descriptions are exceptionally light.

United States

Many meetings of retail lumbermen have been held during January in the United States, and all of them were notable for the fact that they gave evidence of more optimism than there has been for some years past. All conditions are reported to be favorable for a good yard trade in the spring, and in view of the condition of mill stocks and the exceptionally heavy foreign orders it seems unlikely that retailers will hold off in the hope of anything like lower prices. The general business of the country is progressing at a rate which will prevent anything in the way of depression in lumber values. Many rumors of extensive enquiries by the French Government for railway ties and house material are in circulation and are having a strong effect upon the market situation.

On the Pacific Coast, extremely cold weather during January resulted in shutting down many plants and causing a considerable reduction in the output. Shingle production in Washington has been reduced almost to nothing.

Northern hemlock manufacturers are enjoying record prices for hemlock bark, recent purchases having been made at $9. This is a direct outcome of the war, which has cut off a large part of the supply. The demand for hemlock lumber is very satisfactory.

Trade conditions in New York and New England would be good were it not for the fact that the railroads cannot handle the business that is offered. War business is responsible for a large amount of factory and warehouse construction in the east.

Northern pine at Chicago is advancing in price. Stocks are broken and the demand is satisfactory, particularly for the low grades. Retail yards are rather quiet. The northern pine trade at Buffalo has not been active since the opening of the year, but there is a more optimistic feeling among retailers and increased business is expected soon. Prices continue firm. Hemlock at Buffalo is quiet. Stocks are only moderate at the mills. Prices are firm. At North Tonawanda, retailers are beginning to place orders for hemlock. Much building is in prospect and dealers are looking forward to a good spring, with stronger prices.

An attractive calendar has been sent out by the New Ontario Colonization Company Ltd., whose mills are at Jacksonboro, Ont., and sales office at Buffalo, N. Y. The calendar is decorated with a striking colored picture entitled "The Big Prize," representing two hunters in a birch canoe, who have just brought down a large moose.

The annual meeting of the Canadian Pulp and Paper Association will be held at the Ritz Carlton Hotel, Montreal, on February 10th.

EFFICIENCY

The hours I spent at work, dear heart,
Are as arithmetic to me
I count my motions, every one, apart—
Efficiency.

Each hour a task, each task a test
Until my heart with doubt is wrung
I conservate my darndest, but at best
The Boss is stung.

O, theories that twist and turn
O, frantic gain, O laggard loss,
I'll standardize and strive at last to learn
To please the Boss.

James Gavan in The Stearns Co-operator.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

St. John Trade Steady—The Log Output

St. John, N.B., January 19th, (Special to the Canada Lumberman):—The market at St. John has not changed to any extent during the past two weeks. If anything, a firmer and more optimistic feeling is gaining on the wholesale trade. Prices for English deals remain firm. Some trades for the coming year have been made at an advance all around over last year's prices. A good many inquiries are coming on the market. The market in England remains good, while at the first of the month stocks were very heavy, in fact the greatest in years; the consumption was keeping pace with the import and if the Admiralty kept taking the available stocks, as they had in the past, prices would go higher.

Deals on wharves at St. John would demand, for short average stock, $18 per M. on a basis of 50 per cent. 7 and 8 x 3 and 50 per cent. 9 and up. Of course, long average deals cut from State of Maine logs are bringing fancy prices and those mills here which have anything in that line to offer are reaping a well deserved harvest. All the mills at St. John are now idle and will continue so until spring opens navigation. A limited supply of logs are on hand to start with, but in all probability an early drive of logs will come with ice, so no doubt the mills will be well supplied by June. About 15 to 18 million feet are being wintered over, mostly long logs.

The United States market shows a splendid revival, especially in the board lines, which has been at a standstill for a year. Buyers who now come upon the market will find boards extremely hard to find, and prices are a good $2 over two months ago. All the boards throughout the province will no doubt be cleaned up by spring, and this will give the mills a chance for piling and also to get a better price for side stock for 1916. The two and three inch market, both New England and New York, show a very firm tone. The New England base price for 2 x 8, 20 ft. and under stands today at $26. If this continues the United States market should be strong for 1916, and should be a good competitor for the English.

Laths are also stiffening, and should leave $3 upon the wharves at St. John.

The shingle market does not show any signs of moving up or down, but remains firm at prices quoted all season.

The log cut on the St. John this year will not be so large as last year. Upon the upper St. John it will be about the same, as follows:

St. John Lumber Co.	for Van Buren, Me.	47,000,000
Murry & Gregory Ltd.	for St. John, N.B.	12,000,000
Randolph & Baker	for St. John, N.B.	5,000,000
Cunliffe Bros. for Stetson Cutler & Co.,	for St. John, N.B.	10,000,000
Currier, Alfred, for Stetson, Cutler & Co.,	for St. John, N.B.	4,000,000
Pelletier, for Stetson, Cutler & Co.	for St. John, N.B.	1,000,000
Noble, for Stetson, Cutler & Co.,	for St. John, N.B.	7,000,000
To go through sorting booms at Van Buren, Me.		86,000,000
Coming to St. John from above		38,000,000
Miller Estate on Tobique		4,000,000
Randolph & Baker	Grand River	6,000,000
Sundry lots		2,000,000
For mills at St. John, about		50,000,000

This, if all logs come out, will probably work up to 55,000,000 feet for mills here.

Locally, the market is stagnant and factory work and building is about at a standstill. Conditions will no doubt remain this way until late spring. What the outcome may be will depend on war conditions entirely. Refuse lumber is in a somewhat steadier position, caused by outside buyers coming into market and exporting for outside trade.

Montreal Trade Quiet—The Pulp Situation

Montreal, January 24th (Special to the Canada Lumberman): Only a small business is passing in lumber. Building is almost at a standstill and shell box makers are, as a rule, producing on a small scale. Under such circumstances trade is slow, although in spots the orders are on a fairly god scale. Prices are maintained.

Wholesalers with United States connections report that the outlook is not only good, but that business is satisfactory. Recently some large orders for spruce were put through at a substantial increase in price.

The important feature in the pulp and paper market is the embargo by Sweden on sulphite pulp going to Great Britain. As Canada is a large producer of sulphite the inference is that she will benefit by the diversion of trade to this country. There are 14 mills manufacturing sulphite in the Dominion, their surplus being in the neighborhood of 8,000 tons monthly. A considerable portion of this, however, is already sold under contract, and goes to the United States. We have in that country an outlet for all that can be made, under present circumstances, the supply of the European product having been largely restricted owing to the war. The Swedish mills are finding it increasingly difficult to manufacture pulp, in consequence of the short supply of coal and chemicals, and there is a pretty well founded belief that the Swedish Government has adopted the embargo as a reprisal on the British Government. A loophole in the embargo exists, as the Swedish Government will issue licenses to approved firms to export sulphite to Great Britain. The embargo will probably result in the British papermakers looking to Canada to replace part of the Swedish supply, but even if this country were able to supply the demand it is questionable if ships could be obtained to transport the material. Some Canadian sulphite pulp has recently gone to the other side, and inquiries for more are coming in. The shipping problem is also a serious matter as affecting ground wood.

A proposal by the British Government to reduce importations of paper and wood pulp by 40 per cent. into Great Britain would of course be one way of meeting the situation, as it would mean the enforced reduction in the size of newspapers—a measure which would no doubt be welcomed by the proprietors.

B.C. Lumber Commissioner's Permanent Exhibit at Toronto

Mr. W. J. VanDusen of the Forest Branch of the Department of Lands of British Columbia, is at present on a visit to Ontario and Eastern Canada in connection with the work of organizing the Department's work. The operations of the Department in the east will be directed from the Lumber Commissioner's office which has recently been opened in the Excelsior Life Bldg., corner Adelaide and Toronto Streets, Toronto.

The B. C. Government has done remarkable work of late in the way of promoting the interests of the lumber industry, and the opening of an office at Toronto is a part of its general plan along these lines. In the new office an interesting exhibit has been installed showing all kinds of B. C. lumber and timber products. The arrangement of the exhibit is very effective. It contains many examples of wall panelling in Douglas fir (veneer panels in all widths up to 8 in. and solid panels), western red cedar, Sitka spruce and western hemlock. Dimension stock and boards are shown in Douglas fir, western hemlock, Sitka spruce and western red cedar. Douglas fir is also exhibited in capping, trim and base, as well as in a wide range of doors in various designs. The exhibit also includes a complete assortment of all grades of B. C. red cedar shingles in bundles and laid on sample roofs, as well as samples of western red cedar shingle bolts. The ceilings of the office are treated in Douglas fir beams. The floor is Douglas fir edge grain flooring.

A large number of samples are included in the exhibit, among them being mouldings, stepping, base, siding, shiplap in Douglas fir, western hemlock, western red cedar and Sitka spruce.

In the wall panelling, doors and flooring, the exhibit shows a great variety of finish in various stains, gloss finish, natural oil and waxed finish, colored wax finish, cabinet finish, etc., to indicate the great variety and suitable finishes for B. C. woods. In addition to the exhibits, the commissioner carries at the office a full supply of pamphlets dealing with B. C. woods, their strengths, uses and qualities, and all information upon these subjects is at the disposal of any one who is interested. In the near future the exhibit will be increased by the addition of samples of western white pine, western soft pine and western larch.

Improvement Certain in British Columbia

Editor Canada Lumberman:— New Westminster, B.C., Jan. 10th.

While the past year was anything but satisfactory the latter part of it showed a marked improvement and it is our opinion that a further advance in both demand and price of at least 15 per cent. is well within the reach of the lumber trade of this province. We ourselves have made every preparation to take advantage of it and believe that with thorough co-operation on the part of the manufacturers of this province we are well within the possibility of realizing our hope.—The Timberland Lumber Company Ltd.

London Wood Goods Markets During 1915

Churchill and Sim, London, Eng., in their annual wood circular, say:—

The continuation of the war throughout 1915 has very materially affected all kinds of business in this country, but, on the whole, exceptional prosperity has fallen to the lot of the timber trade. Three governing factors have combined to create and maintain throughout the year a favorable situation for buyers of wood. The war has produced the almost unknown phenomenon in the timber trade, of continuously rising markets in all branches of soft woods. Commencing in January with smaller stocks than had been arranged for, owing to the declaration of the German Government as regards contraband in the autumn of 1914, the position of the market gradually improved throughout the season, firstly, under the influence of a strong and active demand, emanating (either directly or indirectly) almost entirely from Government sources; secondly, by reason of a constantly growing increase in tonnage rates from all wood-producing countries, and, thirdly, owing to the complete elimination of the competition of the usual shipments from Finnish and Russian Baltic ports. The consequent shortage, mainly of whitewood, which would, in the ordinary course of events, be quite sufficient of itself to create a favorable market position, was accentuated by the extreme difficulty of securing adequate tonnage for the removal of the usual quantities from the White Sea ports until quite late in the season. It became abundantly clear during the summer, that given a continuance of the rate of demand, a scarcity of wood, especially of whitewood, was bound to declare itself, and that more than the usual quantities in the sizes suitable to British requirements, which were accessible from the northern ports, would be wanted for winter consumption in this country. Under such circumstances Canadian shipments of spruce, especially from the lower ports, assumed greater prominence than usual, and buyers were enabled in part to satisfy urgent calls for stock from them. The important question of tonnage rates has always been, even in normal times, one which afforded buyers considerable anxiety, and has introduced into their calculations of delivered cost a somewhat speculative character; but during the whole of 1915 it has been the one important and overshadowing consideration to all importers of wood. So uncertain were the prospects in this respect early in the year, when buying would, in the ordinary course of events, have been in full swing, that the majority of merchants shrank from the pure speculation involved in free on board purchases, and declined altogether to commit themselves except upon a c.i.f. basis of quotation. The result was that the usual practices customary in the trade have been reversed, and from all shipping centres charters of steamers were effected by shippers in the first place, and contracts followed upon the basis of tonnage quotations. It may be said, generally, that the rise in these quotations has been progressive throughout the season, to the great benefit of buyers, who were enabled to turn over their stocks to advantage, secure in the knowledge that higher prices must be ahead of them as tonnage became scarcer and dearer.

It is worthy of being put on record in a year like this that, based upon the rates current at the close of 1915, timber freights are responsible for approximately 35 per cent. of the delivered value of stock from Sweden, 50/60 per cent. from the White Sea, and 60/65 per cent. from the pitch pine and spruce ports, while from the Oregon pine districts the proportion is even higher.

Wood imported into the United Kingdom in the following years:—

	1912 Loads	1913 Loads	1914 Loads	1915 Loads
Colonial Deals, Battens, etc.	895,496	961,539	847,392	1,126,522
Colonial Timber and Hardwoods	53,109	39,656	37,051	31,176
Foreign Deals, Battens, and Boards.	4,872,093	5,674,598	3,993,186	3,698,062
Foreign Timber and Hardwoods	3,783,423	4,340,665	3,091,597	2,459,563
Colonial and Foreign Staves	169,295	182,131	93,439	110,763
Total, in Loads	9,773,416	11,198,589	8,062,665	7,426,086
Value	£26,238,259	£30,878,619	£22,692,061	£30,789,087

In spite of the vastly increased arrived value of wood this season, and especially when it is borne in mind how much higher is the proportion represented by freight charges, which have to be settled upon a cash basis, the financing of the trade has apparently given merchants little trouble.

Imports into London from Sweden dwindled greatly, as shown by the following table:—

	1911	1912	1913	1914	1915
Deals. Pcs.	996,000	1,357,000	1,258,000	1,582,000	2,066,000
Battens Pcs.	3,699,000	4,663,000	4,004,000	5,579,000	8,923,000
Boards Pcs.	16,195,000	18,534,000	19,441,000	25,445,000	21,774,000
Firewood Fthms.	27,000	26,000	37,000	20,000	1,000

Imports into London from Russia were as follows:—

	1912	1913	1914	1915

A New Era Facing Canada's Business Men

Editor Canada Lumberman:— Grand Forks, B. C., Jan. 5.

Some time ago the Honorable Martin Burrell gave to Canada and to the Canadian people the slogan "Patriotism and Production," which has become a part of the life of every true Canadian.

In every little hamlet, village, town, and city throughout the Dominion, hearts have been touched and deeds accomplished, which when we look back after years of plenty will appear to us to be the wonder of the century.

In the short time since this slogan was given to the Canadian people, wonderful changes have taken place in the Industrial life of Canada. During the past year 25 per cent. more acreage has been cropped than ever before. In every city large or small, every vacant lot has brought forth a harvest, thus not only supplying the needs of the Canadian people but also supplying to our Mother Country. the staff of life to continue in her most righteous war.

Not only did this slogan "Patriotism and Production" appeal to the owners of the land, but it also touched the hearts and pockets of the men of large financial interests and in consequence they were not behind their fellows. Manufacturing concerns, which had been idle for years were financed and became the employers of labor. Other large manufacturing plants were constructed, and as a result, we have, in Canada, laid a solid foundation for continuous prosperity. When the history of Canada is written the slogan of the Honorable Martin Burrell "Patriotism and Production" will be handed down as the guiding star to Canada's future greatness, and the Honorable Martin Burrell will be accounted among Canada's greatest statesmen.

But what of the lumber industry? Has this guiding star been followed by the industry employing the largest quantity of labor of any industry in Canada? Most assuredly so. The starting up of the mills and logging camps must necessarily depend on the general prosperity of the country, practically 90 per cent. of its output being marketed in Canada. The immense crop in the western provinces has resulted in an extraordinary demand for better houses, larger barns, better sheds, and as a result, the stock of dry lumber in British Columbia has never been so small in years.

This guiding star has caused a co-operation of all branches of the industry in a national movement to educate the consumer and promote the use of wood wherever it is the best available material, or can be made equal to other materials for the services required. Lumbermen have learnt what other successful merchants knew long ago. that in order to make money, money must be spent in promotion. The lumber associations of the west have met together with that object in view.

The Province of British Columbia, through the efforts of the Honorable W. R. Ross, Minister of Lands, realizing that the lumbermen were at last getting together and taking some constructive progressive action, and seeing the necessity for further expansion, admirably came to the assistance of the industry, knowing that any assistance given would bring large returns to the Province. A special officer was sent to foreign countries to regain the former large export trade and also to further increase it. Large orders for many million feet of lumber were thus secured for the export mills of the Province of British Columbia. As the export trade would not very materially assist the interior lumbermen, the Honorable Mr. Ross had his forestry officials meet with the interior associations to discuss ways and means and as a result a policy of advertising British Columbia interior lumber was inaugurated with a grant of $50,000 to carry it through. As the prairie provinces are the large consumers of the lumber of the interior, particular attention was paid to the needs of the consumers of lumber in those provinces. Numerous pamphlets describing the different kinds of woods, with specifications and plans of different houses, cattle and horse barns, piggeries. poultry houses, implement sheds, etc., were issued and distributed. A special agent was appointed to lecture at the different centres in the prairie Provinces and to further the use of British Columbia woods. The result of this most progressive policy of the Lands Department of British Columbia, is going to be a very much larger consumption of lumber and better prices.

When this great war is over there will still remain the commercial battles of peace. Let us have a world wide outlook and an industrial and commercial policy suited to deal with the world as it is. We must be careful where we buy our goods in the years to come. Let us have inter-provincial trade whereby the British Columbia lumberman buys his supplies from the prairie farmer, and the prairie farmer buys his lumber from the British Columbia lumberman, thereby bringing content and plenty to all. This is not sentiment but good common sense. Why then should we still be burdened with an inadequate dumping clause in our customs tariff, which allows surplus fruit from the western States to be dumped on to our prairie market, and surplus lumber to be brought in below the cost of production. Why not give our Canadian fruit grower and our lumberjack a chance? In both fruit growing and lumbering at least 60 per cent of the cost is paid out for labor. Let us therefore as men vitally interested in the destiny of our industries. plead, insist and demand that an amendment to the dumping clause should be enacted forbidding the entry of any commodity when invoiced below the cost of production.

It has been stated and largely advertised that any change would increase the cost of production to the consumer. This is a misleading statement for the following reasons. There are every year, hundreds of acres of fruit which are never picked on account of this unfair competition. For several years not over 60 per cent. of the lumber mills have been operated owing to this unfair competition. Therefore by making adequate amendments to the dumping clause and making it possible to pick all the fruit and to operate all the mills. competition would be so keen that the consumer would still get his fruit and lumber at a moderate price.

We know that when peace has been restored, a new era of prosperity and progress will dawn upon British Columbia and upon the whole of Canada and this country will offer opportunities for labor and enterprise which will not be surpassed in any other part of the world.

Absolute confidence and optimism characterizes the lumbermen of British Columbia, in spite of being compelled last year to face an indifferent market which would respond only when prices were hammered below the cost of production.—W. Mark DeCew.

The Forest Products Laboratories of Canada, Montreal, are preparing a bulletin on B. C. fir, showing the characteristics of this lumber, comparative tests, etc.

Large Order for Pacific Coast Fir Goes to U.S. Firms

Lumber mills on the Columbia River and the Puget Sound have been invited to bid on an order of 200 million feet of fir lumber for immediate delivery to the French Government. Contracts for all this material have been placed with a San Francisco lumber broker and the entire order is to be filled by the mills in Oregon and Washington. All the large mills in Portland are bidding on portions of the order varying from 10 million feet to 50 million feet. The order includes a large quantity of railroad ties and lumber and timber for trenches. It is expected, on account of the keen competition, that the price to the mills will not exceed $12 or $13 per thousand. Under the terms of the contract the lumber is to be delivered f. o. b. at the mills and the French Government is to provide transportation. It is expected that the shipment will be handled entirely by water, but if the Panama Canal is not opened again in time it may be moved to the Atlantic by rail. The French purchasers are to assume the risk in connection with transporting the shipments, the responsibilities of the mills ceasing when the stock is delivered either on cars or on ships.

National Association to Meet in Chicago

The annual meeting of the National Lumber Manufacturers' Association will be held at Chicago on May 31st, June 1st and June 2nd. In connection with the trade extension department of the Association much excellent progress has been made. A large amount of technical and popular literature is being prepared which will be widely distributed. Arrangements are being made for holding special meetings of lumbermen in ten of the larger cities of the United States to discuss questions of trade extension. Other meetings of a similar nature will also be arranged for subsequently. Very complete mailing lists of architects, engineers, manufacturers, retail dealers and others are being prepared, and a regular press service is being inaugurated.

Predicts a Shingle Shortage

Editor Canada Lumberman: Vancouver, B.C., January 18th.

We are most optimistic in regard to future prospects, and our optimism is founded on the fact that we have already done quite a large volume of business at advanced prices, and that we have a large number of orders booked for shipment within the next few months at still further advanced prices. We cannot recollect there ever being a winter in our past experience when the demand for shingles was so active as it has been during the portion of the winter season already past. Not only has this activity been a result of speculation by wholesalers in placing orders for future shipment, but in our experience to a great extent has been the result of orders placed by the retailers, who evidently during the depression of the past year or more have allowed their stocks to become almost extinct and are anxious to have orders placed for the very earliest possible spring shipment in order to be prepared to meet the demands which they consider sure to come.

We consider this a wise action on the part of any retailers who have thus anticipated the future, as there is practically no surplus of shingles left on hand at the mills this fall, and the winter here on the Coast has been an unusually severe one, forcing practically all of the mills to shut down indefinitely until weather conditions are more favorable. The result of this, in our minds, will be, that there will be a shortage of shingles to meet the early spring demands, inasmuch as there will be no winter accumulations to draw from as in past years, and that the demand will be much more active as a result of a general betterment of conditions throughout this continent.
—The Robert McNair Shingle Company.

"Everything in Canvas"

Contractors to the Army and Navy of the British Empire

DURING the past few years our manufacturing facilities have increased fourfold. The amalgamation of the Woods Company, with the Smart Bag Co. into which it is now known as Smart-Woods, Limited, offers for your approval the products of one of the strongest and most reliable manufacturing corporations in the whole of Canada.

AS a result of this amalgamation, not only have our manufacturing facilities been wonderfully increased, but we are now in a much better and greater position to offer you all lines previously stocked, as well as many others that come direct from our recently added factories.

In addition we may say, "Our foreign trade has increased by leaps and bounds—both European and American—and we are prepared to enter into competition in every civilized portion of the globe."

Smart-Woods' Special Surveyor's Tent. Write for Catalogue.

WE are now open for competition in every thing that is possible to be made out of canvas, as well as all lines of Lumbermen's and Contractor's Supplies, such as Blankets, Clothing, etc., etc., it being one of our greatest pleasures to quote prices at any time. Our wonderful large stocks of raw material and increased number of factories, (Ottawa, Toronto, Montreal, Winnipeg, Renfrew and Welland), enable the execution of largest orders on shortest possible notice.

Samples and quotations will be furnished at any time and every possible expediency rendered to hasten shipments as soon after ordering as possible.

EDGINGS

Ontario

Geo. Rivers, Strathroy, Ont., is establishing a basket factory business at that place.

The township of Elderslie, Ont., is receiving tenders for 10,000 feet of cedar 4 in. thick and 16 ft. long. The township clerk is Mr. R. C. Pearce, Paisley, Ont.

The Trenton Cooperage Company, Trenton, Ont., report that their recent loss by fire amounted to between $6,000 and $7,000, the damage being confined to stock. None of the plant was burned.

The township of Kincardine, Ont., is receiving tenders for 4,000 feet of plank 16 ft. x 3 in. and 4,000 feet of plank 14 ft. x 3 in., all hemlock or tamarac. The township clerk is John Corbet, R. R. No. 1, Lorne, Ont.

A. F. Campbell has started a sawmill at Arnprior, Ont., giving employment to about 20 men. Mr. Campbell recently purchased a limit near White Lake from which he will secure logs. He will also undertake custom work.

Mickle, Dyment & Son, Gravenhurst, Ont., report that there will be no cut at the Dyment Mickle mills at Whitney or Fenelon Falls during 1916, and that the Mickle Dyment plants at Gravenhurst and Severn will cut about half the quantity they cut during 1915.

Eastern Canada

J. B. Campbell & Son, sawmill owners, Clarksville, N. S., have been registered.

The Davidson Lumber Company, Springfield, N. S., are contemplating replacing their stock gang with a circular mill.

The Mile End Sash and Door Company, Montreal, P.Q., has been registered. Mr. Arthur T. Cote is interested in the company.

The Dominion Timber & Minerals Ltd., have been incorporated with head office at Montreal and capital stock of $250,000 to carry on business as lumbermen, loggers, etc., in all their branches. Those interested are L. E. Mailhiot, L. A. David and S. H. Bush, all of Montreal.

The Eagle Lumber Company, Limited, Montreal, has purchased a saw mill and 25 miles of timber limits from Mr. Deslauriers, St. Marguerite, Que. Tis mill was built last year. The company has in addition a dressing mill and sash and door factory at St. Jerome and a saw and dressing mill at Mont Laurier.

The Belgo-Canadian Mines and Timber Lands Limited, have secured letters patent to carry on business in the province of Quebec as manufacturers and dealers in timber, lumber, sawlogs, etc. The head office of the company is at Montreal, P. Q., and the capital stock is $40,000. Those interested are C. L. Melkman, S. E. Melkman, G. J. Barry, attorney, and F. A. Beique, all of Montreal.

Western Canada

The Rogers Lumber Company have purchased the business of the Lumber Manufacturers Yards Ltd., at Bounty, Sask.

The Reliance Lumber Company Ltd., have sold their business at Liberty, Sask., to the Lumber Manufacturers Yards Ltd.

The Monarch Lumber Company Ltd., have purchased the business of the Lumber Manufacturers Yards Ltd., at Milden, Sask.

The Dutton Wall Lumber Company Ltd., have purchased the business of the Lumber Manufacturers Yards Ltd., at Swanson, Sask.

The McLean Shingle Mill at Port Moody, B.C., has been closed down temporarily. The machines are being overhauled and refitted.

The Burnaby Lake Lumber & Shingle Company Ltd., has been incorporated with head office at Vancouver, B. C., and capital stock of $5,000.

The Apex Lumber Company Ltd., has been incorporated with head office at Vancouver, B. C., and capital stock of $50,000 to carry on business as lumbermen, loggers, lumber, shingle, sash and door and general manufacturers and to own and operate sawmills.

The Riverside Lumber Co. Ltd., Riverside, Calgary. Alta., recently lost their sawmill at McGillivray, B.C., by fire, and also 1,000,000 feet of lumber which was totally destroyed. The amount of the loss is estimated at $65,000. The company propose to rebuild at once.

The Manning-Sutherland Lumber Company, Calgary, Alta., will establish four or five lumber yards in the near future on the new Canadian Northern branch running southeast from Camrose, Alta. It is expected that the yards

will be located at Bawlf, Heisler, Forestburg and one or two towns east of Forestburg.

J. B. Johnson, Vancouver, B. C., representing a company which is about to be formed, is considering the establishing of a timber creosoting plant at North Vancouver, B.C., the plant to cost about $100,000 and to give employment to from 40 to 70 men. The promotors are asking for certain concessions in the way of fixed taxation. Mr. Johnson states that his company is ready to go ahead with the proposition as soon as it receives a favorable reply from the North Vancouver Council.

The Cache Creek Timber Company has been registered as an extra-provincial company to carry on business in the province of British Columbia as sawmill operators, lumber manufacturers, etc. The head office of the company is at Nashville, Tenn., U. S. A., and the provincial office is at 904 Standard Bank Bldg., Vancouver. The capital stock of the company is $50,000 and James H. Lawson, Vancouver, is attorney for the company.

The Athabasca Power Company, Limited, have secured letters patent to carry on business in the province of Manitoba as manufacturers and dealers in lumber, timber, logs, wood and all articles into the manufacture of which wood is used. The head office of the company is at Winnipeg, Man., and the capital stock is $100,000. Those interested are R. C. McPherson, R. W Killey, E. W. Lowery, S. L. Goldstine and A. H. Bogstrom, all of Winnipeg.

Some of the Past Year's Lessons

Editor Canada Lumberman: Winnipeg, January 15th.

Our experience during the past year has, of course, been the same as the experience of others in the business, in that had it not been for the big crop and the resultant large sales in the fall, the year's operations would have been very unsatisfactory. During the first six or seven months of the year, our sales were the lightest since we started operating, but our fall sales were so heavy that they did a great deal toward retrieving the situation.

The same applies to collections, which were extremely slow until the returns began to come in from the new crop, and since that time they have been the best that we have ever known.

We are looking for a business somewhat above normal during the early spring, but do not think that in times like these we are any of us warranted in believing that conditions are going to be other than approaching normal.

It will be hard to estimate of how much value the experiences of the last year or two have been to both buyers and sellers throughout the whole west. The credit situation has materially improved, in that the seller has discovered through trying experiences that it is just as important for him to give attention to getting paid for his material, as it is for him to find a market in which to sell it. The buyer has learned what it means to be in debt and to be obliged to sacrifice his holdings in a poor market in order to meet the demands of his creditors. This lesson is to be learned through experience alone, and it is to be hoped that it will not require any further demonstration to make us see the folly of a loose credit policy.

During the past year the retail situation has been cleared up considerably by the withdrawal of yards at points where there was an over-supply, and this must be entered on the credit side of the ledger in estimating the losses and gains as pertaining to the lumber trade in general.—William P. Dutton.

Prices Will Hold During 1916

Editor Canada Lumberman: Enderby, B.C., January 17th.

The Mountain mills in British Columbia had an unusual demand for their product during the fall months of 1915, which held up well into December. This demand came principally from the rural districts of the three prairie provinces of Alberta, Saskatchewan and Manitoba, due to the heavy crops, the increased price for farm products and inability of the railways to handle the crops, making it necessary for the farmer to build small granaries to protect his grain against the elements, or store his grain in granaries in small towns till empty cars could be secured to move it to market. This demand was chiefly for No. 1 common dimension, boards and shiplap and drop siding, causing an exceedingly heavy shortage of these items in the mountains. Stocks of dry common are practically exhausted in the mountain mills. Stocks are about 125 million feet short at present of what they were January 1st, 1915. Inquiries are coming in quite freely from the line yards, and there is an inclination with many line yards to place their spring requirements early. The manufacturer has been able to advance the price of his product over the prevailing price for the same period a year ago and with short stocks and increased demand the advance is being well maintained by the larger mills. The trade outlook for the first six months of 1916 is very encouraging. Should the crop outlook appear favorable as the season advances, the year 1916 should be better than any period since 1912. Some mills are logging more heavily than at any time since 1913, but generally speaking the output will be practically the same as in 1915. The present prices, we think, will hold till another crop is assured, in which case the manufacturer will be warranted in further advancing his price.—Okanagan Saw Mills, Limited.

The annual dinner of the R. Laidlaw Lumber Company's staff at Sarnia, Ont., was held on January 15th. After the dinner a pleasant and profitable evening was spent in discussing matters of interest to the lumber business.

Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

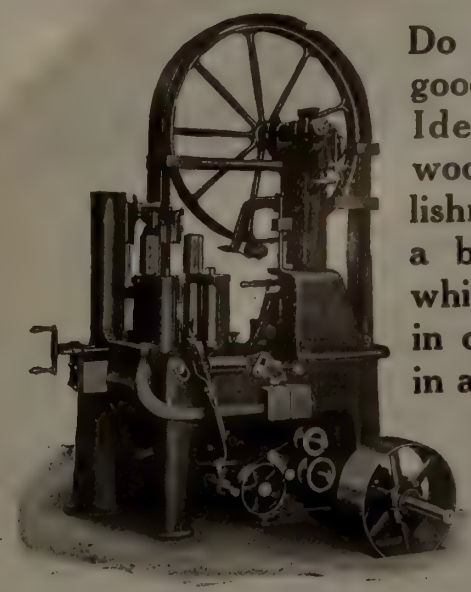
And 5 per cent. on the sale of all other products of the berth.

Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

W. W. Cory,

Department of the Interior, Ottawa, Deputy Minister.
December 20th, 1912.



Ideal Band Resaw

Do you realize how good a resaw our Ideal is? Every woodworking establishment should have a band resaw, and while you are putting in one, why not put in a good one. Our Ideal Band Resaw, as built today, embodies thehighesttype of workmanship, material and design, and is astonishingly low in price. There are a thousand of them in use, giving universal satisfaction, but if their merits were generally known, there would be five thousand. Let us tell you about it, and give you the names of your neighbors who know about this machine.

Saving $100,000.00 Yearly on Coal Bills

Arrangement of Jones Underfeed Stokers in Dutch Oven for burning paper mill refuse in conjunction with coal.

That may sound fabulous but it is a fact established by the Minnesota & Ontario Power Company. Before the installation of Jones Underfeed Stokers 695 tons of coal at $3.50 per ton were the daily requirement. With the Jones Stokers and Dutch ovens, as illustrated, the mill waste was utilized and only 5 tons of coal were burned each week.

This is only one example of many showing the immense saving in fuel bills effected by Jones Stokers.

We will be pleased to correspond with you regarding the use of Jones Stokers in your plant. Write us.

"Wilson Bros." Hardwood Flooring

is the Flooring that is manufactured expressly to supply the demand for the best. It is made by modern machinery from carefully selected stock, and every precaution is taken throughout our entire system to make it fulfil the requirements in every particular. Write us for prices.

Wilson Bros., Limited - Collingwood, Ont.

A Good Belt Saves Money

THE money wasted in keeping a stretching belt taut amounts to a surprising figure. If you use "Goodhue Belts" in your mill or factory you can save most of this money because "Goodhue Belts" stretch less by 15 to 25 per cent. than any other belt. They are made from skillfully selected hides with the stretch taken out of each section before it is made up into the belt.

According to the conditions under which the belt is to run, we recommend **"Extra," "Standard,"** or **"Acme Waterproof"** belts.

Send for further particulars and prices

National Trucks

The production of Motor Trucks by the National Steel Car Co., Limited, is a logical development of the resources of the Company.

More than a year ago the National Steel Car Co., Limited, commenced to use its resources and facilities in the designing and manufacturing of Motor Trucks, its progressive steps being directed by careful study and analysis under laboratory conditions, supplemented by service tests of exceptional severity.

In announcing the National Motor Truck we confidently state that it will give a service that will be one of utmost satisfaction.

WRITE FOR CATALOGUE

It is a matter of the greatest importance to the purchaser that he should know that he can depend upon the guarantee of the manufacturer as well as upon the future service he will receive from the Truck Maker, no matter where the truck may be in use.

Details of the specifications and the service which goes with every National Truck gladly sent upon request. Address enquiries to Hamilton Office.

Kendall Gang Circular

The Machine you have been waiting for.

The Machine that will convert your small logs into more and better lumber, quicker than ever before.

The illustration shows the latest design of gang circular patented by Mr. I. N. Kendall, the well-known millwright, of Ottawa. This machine takes 16-26 in. diam., 10 gauge saws—will cut cants up to 8 inches in thickness, and we furnish with it 30 saw collars for any thickness of lumber desired. It has a hollow mandrel, water cooled saws; each saw has a separate guide; easily accessible and readily adjustable, and the bridge tree is so designed that it can be removed, the saws taken off and a new set put on in 10 or 12 minutes. Safety fingers hung just inside the front press roll prevent a cant flying back off the saws. Lumber cut on these machines is guaranteed to come out absolutely true from end to end.

We are the original manufacturers of these Machines

We have been manufacturing them for the past ten years, and the experience gained in those years is at your disposal. We make these machines in three sizes, as follows, using

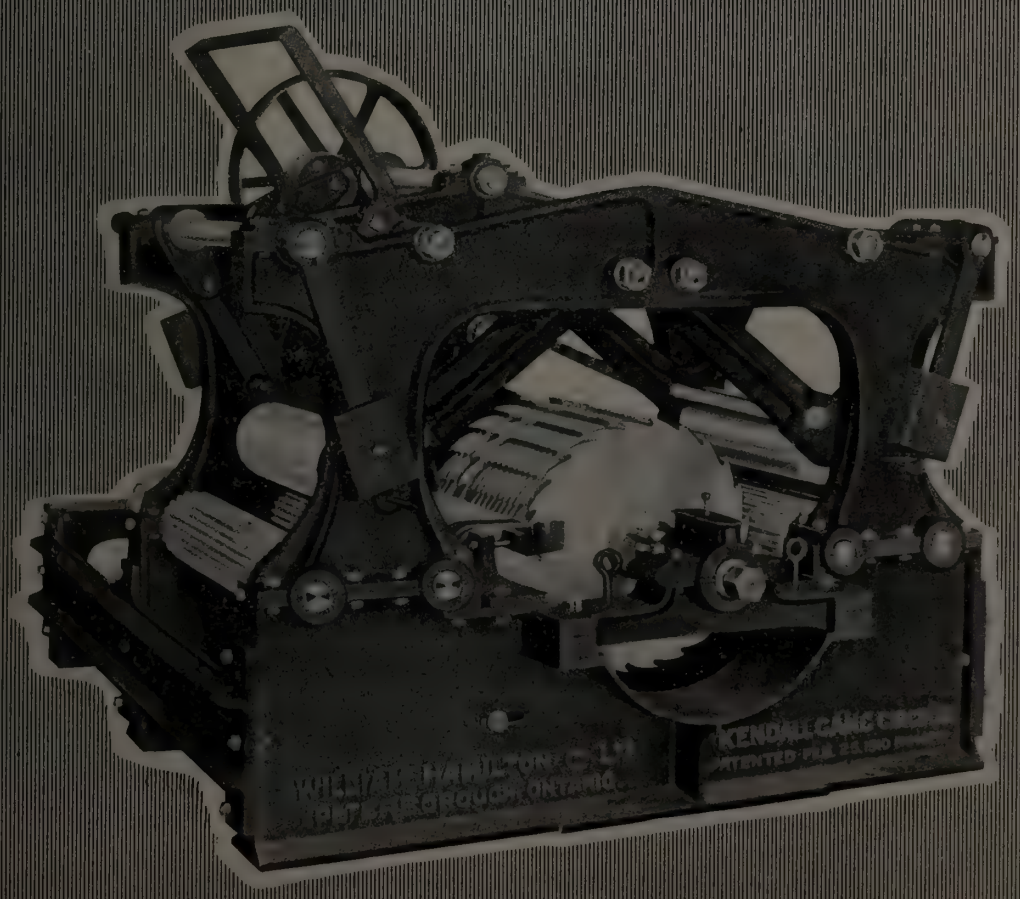
26-in. saws for 8-in. cants, as illustrated.
32-in. saws for 10-in. cants
36-in. saws for 12-in. cants.

May we send you a list of satisfied users?

We also make a complete line of twin circulars with chain or steam feed for slabbing logs for these machines.

William Hamilton Co., Limited

PETERBORO, ONTARIO



We make a Specialty of

Conveyor Chains

For Lumbermen

WE make them from carefully-selected iron, and every link is guaranteed ***strictly hand-made***—not the inferior machine-made.

The point is worthy of special emphasis.

We make the chains according to any dimensions desired, guarantee splendid workmanship; uniformity; dependability.

Prices are the lowest possible for the class of work we furnish, and Quality above criticism.

Let us quote for your needs.

Send for catalogue giving estimated weights of various sizes of chain; prove test; breaking, straining and safe-working loads, and giving hints regarding the care of chain which will prolong a chain's usefulness.

Logging Locomotives

Made in Canada

Our fifty years' experience in the design and manufacture of logging locomotives is at your disposal. Many of the largest logging operators in Canada are using our "Canadian Made" locomotives.

Our logging models are as carefully designed and built as our 200 ton sizes—oil or coal burning.

MAY WE SEND YOU SPECIFICATIONS?

This engine is 13½ ins. x 18 ins. and weighs 35 tons.

LOGGING LOCOMOTIVES

The designs of our Logging locomotives are the result of wide experience, extending over a period of 80 years.

The material used in their construction is thoroughly tested and is the best of its kind.

All details are accurately finished to standard gauges and are absolutely interchangeable on all locomotives of the same class and size.

This cuts out long delays at critical times of the work, as parts liable to wear can be kept on hand or shipped promptly from our works.

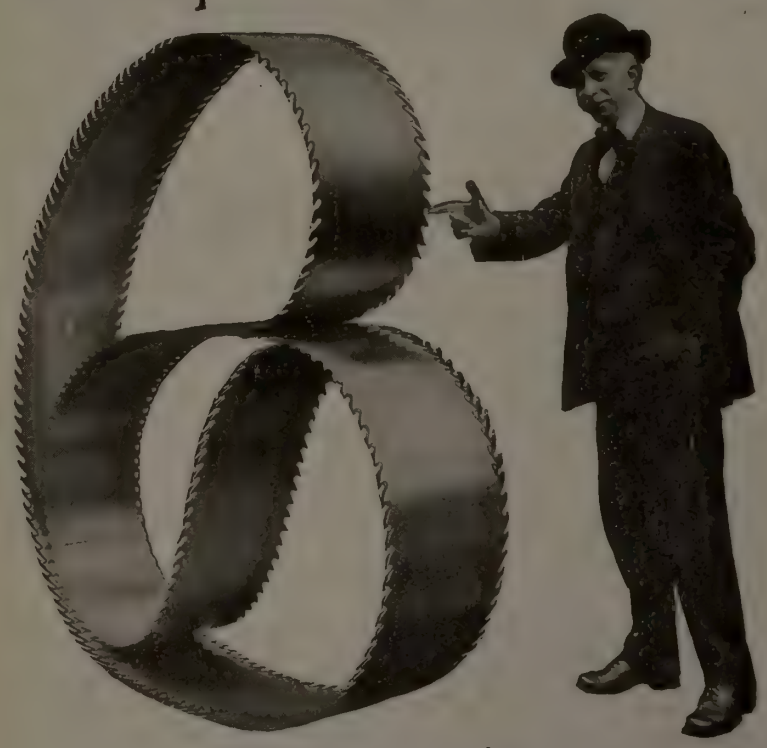
The Superintendent Smiles

That's why they are called



The Saw with a Smile

One of our big mills reported a cut, on Dec. 6th, of over one million feet in twenty-two hours. *They smiled.* So will *you*—when you use them.

You have probably promised yourself to try ATKINS SAWS sometime. Well—*now* is the time.

Specify ATKINS BAND, CIRCULAR, GANG, CROSS-CUT or any other type of Mill Saw. Try ATKINS MACHINE KNIVES. We'll make good.

When he sees his ATKINS STERLING STEEL SAW

MADE IN CANADA

E. C. ATKINS & COMPANY

Factory – HAMILTON, ONT.

Makers of Sterling Saws

Vancouver Branch 109 Powell St.

A Test In Your Workshop

will convince you of this fact:

That it is cheaper to use two files where you now use only one.

Take a certain piece of work and give one man a new file, and another a half worn file on a similar piece of work.

The man with the new file is doing what you are paying him for. The other man is filing away your time.

The man with the new file takes a pride in his work.

The man with the old file starts with a grouch, and the work suffers.

When the inefficient point in the files is reached it is good policy for you to have your men discard them.

And they should be replaced with the five famous brands:

KEARNEY & FOOT
GREAT WESTERN
AMERICAN
ARCADE
GLOBE
(Made In Canada)

Made in Canada by a plant controlling 90% of the file business.

Backed by 50 years' experience in the making of efficient files.

PATENT AND COMMON LAID
CORDAGE,
Manufactured by Water-Power.
THE Plymouth Cordage Company hereby give notice that they have on hand One Hundred Tons, Clean St. Peter burg Hemp, of superior quality, which they are ready to manufacture into Cordage of any size or description to suit purchasers. Their machinery and water privilege is equal to any in the Country—and their Cordage shall in every respect be equal to their advantages. All orders for Cordage, to any quantity, will receive immediate attention, if sent from
Plymouth, March 12.
N. B. A number of boys will find employment

Plymouth Policy

Our first ad

shows the stress laid, even in the earliest year of the business, upon the policy which governs the manufacture of Plymouth Cordage—"highest quality only".

It is well to know that we have always had such a policy. It makes you feel certain that the same policy will be continued.

In the light of our growth this course is obviously the profitable one for us to follow. And the greater service which it enables us to render to those who sell or use our goods likewise makes it the natural one.

At no time have we seen any reason for changing this policy. Instead, we receive proof every day that "highest quality" is the only quality worth sticking to in cordage—whether you make it, sell it or use it.

Steam Log Kickers

The illustration shows our Standard Double Deck Steam Log Kicker which we manufacture with cylinders 8 in., 10 in. and 12 in. bore. This kicker is made for either single or double deck mills. The bottom head of the cylinder is cast solid, eliminating the necessity of taking the machine apart for packing. The joint between the valve case and cylinder is a "ground joint" which is perfectly steam tight and requires no packing.

This mark on your saw mill machinery is an indication that your lumber manufacturing equipment is the best and most economical money can buy.

Throw Out Those Old Valves!!

Don't tolerate kicking or leaking valves on your Steam Feed. Just as sure as your valves kick, your cutting capacity is going to take a drop. The Sawyer "feels" his work through his lever. A kicking valve scares him off his work; a leaking valve won't let him do his best. Both kinds are money losers for you.

WATEROUS VERTICAL STEAM FEED VALVES

Will neither kick nor leak.

In the first place, the vertical position of this new valve allows perfect drainage into the exhaust port at the bottom. Should the connection break the valve drops of its own weight and shuts off the steam. That's a ***safety*** feature.

Then, the exhaust—mostly water—doesn't pass through the valve plug, but through the lower part of the valve chest. That's why the valve ***cannot kick.***

And—most important of all—with the vertical valve there is no weight on the valve seat and consequently ***no wear*** and ***no leakage.*** It's a ***real*** steam conserver.

Further, the **Waterous Vertical Valve** is balanced to work easy, there is no dead steam between it and the cylinder. Just as soon as the sawyer moves his lever he gets the full "punch" of the live steam on his piston. That makes a ***fast, quick-acting, satisfactory feed.***

If yours isn't that kind now, attach **Waterous Vertical Valves** and see what a difference they will make.

$5,000,000.00
worth of mixed metal sold annually.

"FROST KING" METAL

Our thirty-five years experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. **Price 30c per lb.**, Fort William and East; West of Fort William **35c per lb.**, delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our FAULTLESS BABBITT will stand where all other metals will fail. Price, Fort William and East, **40c per lb.**; West of Fort William, **45c**, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

COSTS LESS PER DAY

AMPHIBIA BELTING

COSTS LESS PER DAY

Put Good Belting

on your

Good Machines

Your machines are expensive, and naturally you expect them to turn out the quality and quantity of work commensurate with their cost.

Then why harness them with belting which cannot begin to do them justice?

Use

"AMPHIBIA"

Planer Belting

and get the most work from your machines, in the quickes time, at the lowest cost per day of service.

Try a sample run of "AMPHIBIA" Planer and prove its merits.

FOR SALE: Machinery and Timber

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the town of Parry Sound, Ont.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Special bargains in the townships of Burpee, Falconbridge and Street for small mills.

We have the following Sawmill Machinery for sale:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

All of the above open for inspection at Parry Sound.

The Parry Sound Lumber Co., Limited, 26 Ernest Ave. Toronto, Can.

Our Yards are Unequalled for Drying Lumber

To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

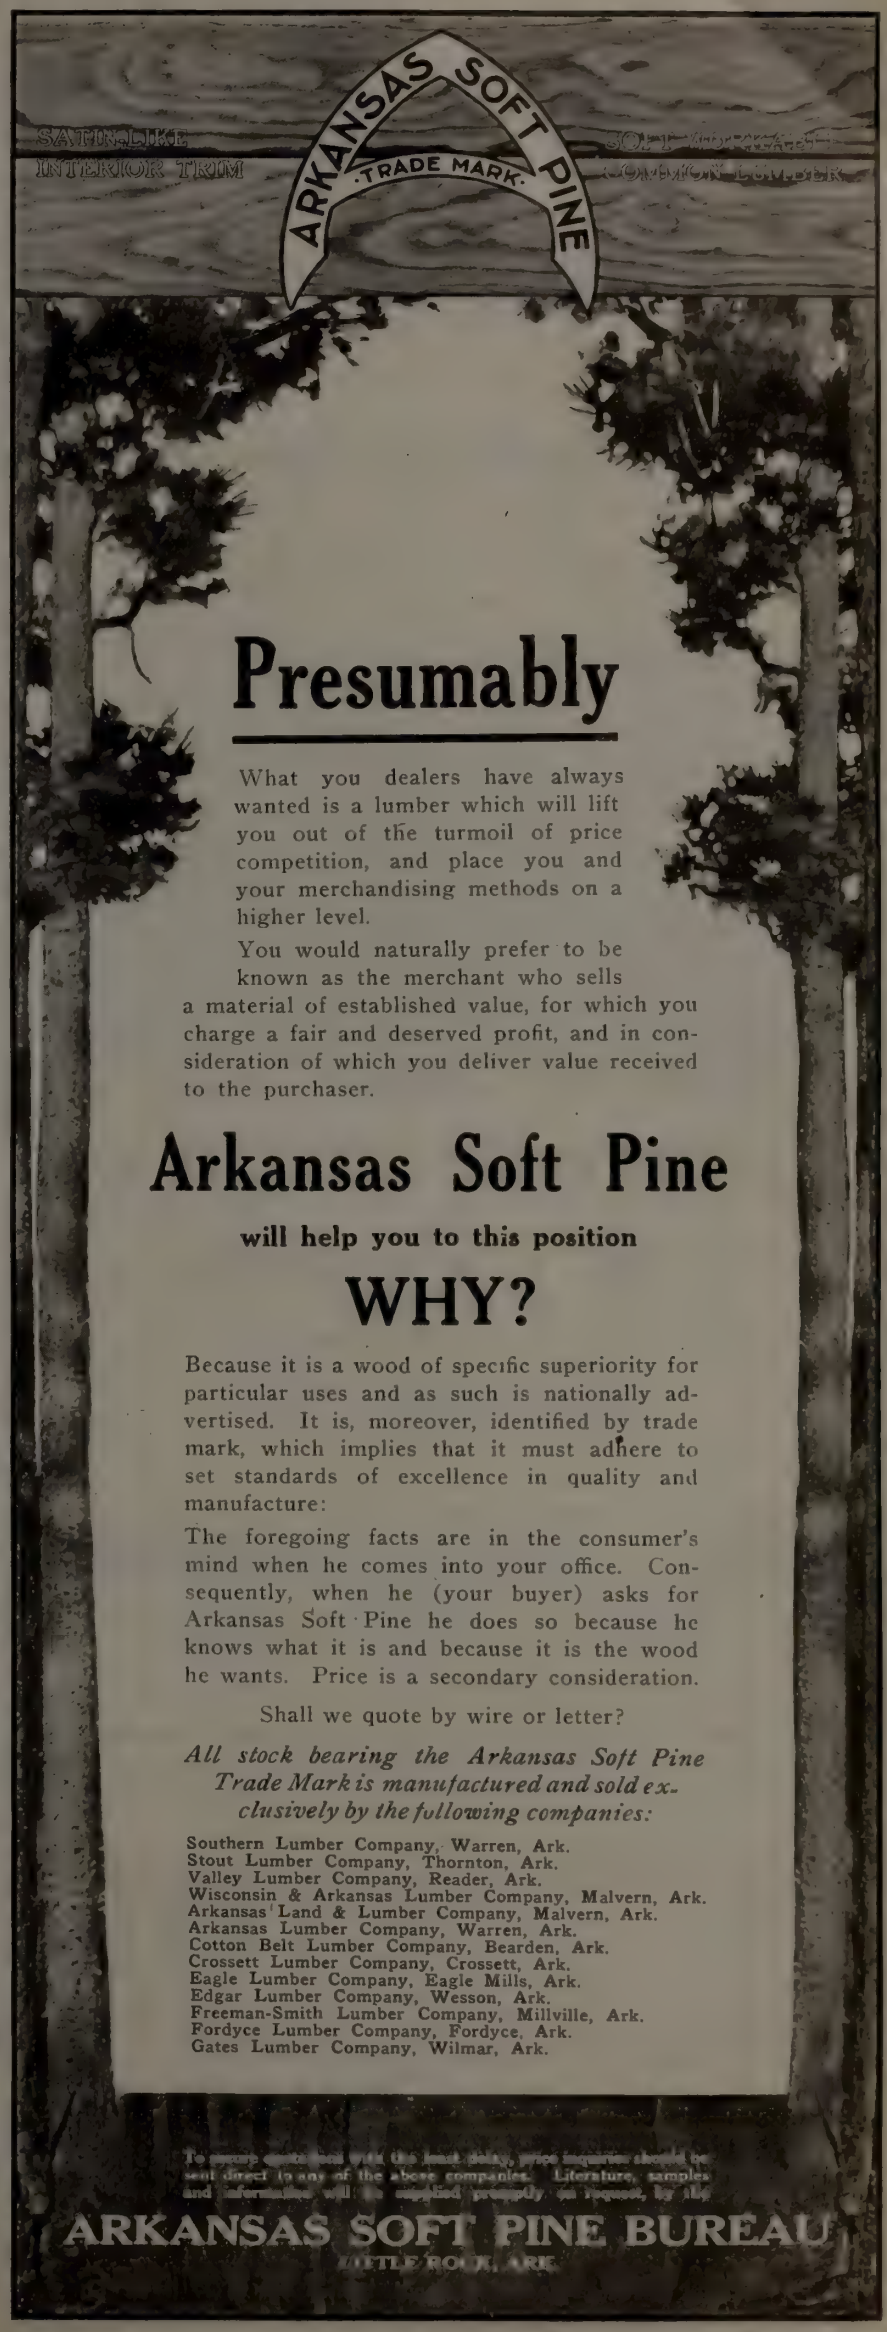
Messrs. Robt. Hamilton & Co. Ltd., Bank of Ottawa Bldg., Vancouver, B.C.



Presumably

What you dealers have always wanted is a lumber which will lift you out of the turmoil of price competition, and place you and your merchandising methods on a higher level.

You would naturally prefer to be known as the merchant who sells a material of established value, for which you charge a fair and deserved profit, and in consideration of which you deliver value received to the purchaser.

Arkansas Soft Pine

will help you to this position

WHY?

Because it is a wood of specific superiority for particular uses and as such is nationally advertised. It is, moreover, identified by trade mark, which implies that it must adhere to set standards of excellence in quality and manufacture:

The foregoing facts are in the consumer's mind when he comes into your office. Consequently, when he (your buyer) asks for Arkansas Soft Pine he does so because he knows what it is and because it is the wood he wants. Price is a secondary consideration.

Shall we quote by wire or letter?

All stock bearing the Arkansas Soft Pine Trade Mark is manufactured and sold exclusively by the following companies:

Southern Lumber Company, Warren, Ark.
Stout Lumber Company, Thornton, Ark.
Valley Lumber Company, Reader, Ark.
Wisconsin & Arkansas Lumber Company, Malvern, Ark.
Arkansas Land & Lumber Company, Malvern, Ark.

British Columbia Has a Wood for Every Use

Best Footwear For Your Work

Woodmen, construction camp workers, sawmill hands and others whose work takes them into wet places and rough going, need footwear out of the ordinary.

We have been over thirty years making special footwear for such kinds of work. This line we put on the market under the name of

PALMER'S "Moose Head Brand"

Our lines in Draw Strings and Regular Sewing represent what we have aimed at producing during our whole history in business—**the best oil-tanned waterproof footwear in the world.** We select the highest grade Chicago Packer Steer Hides and oil-tan them ourselves by a secret process that produces the finest leather in the world, known as Skowhegan leather.

Palmer's "Moose Head Brand" footwear fits better, looks better, wears better. In making them with a view to unusual wearing qualities, we have not overlooked the important points of appearance, fit and comfort.

Write for booklet "L" to-day. Free to you by return mail.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year in advance; other foreign countries embraced in the General Postal Union, $3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N. Y., under the Act of Congress of March 3, 1879.

Vol. 36 Toronto, February 15, 1916 No. 4

Grading Rules under Discussion for the Toronto Market

A few years ago the Canada Lumberman published a series of articles dealing with the importance of grading rules for lumber and advocating the adoption of a set of rules for the chief woods used in Eastern Ontario. Although we met with much approval from lumbermen, when it came to a matter of getting manufacturers to accept a set of rules, or to approve even of the principle, the whole thing fell flat. What the interests were that killed the idea at that time we do not know very definitely, nor for that matter do we care much about it as it is now simply a matter of trade history, but the idea was killed so effectivtly that it has not been brought forward again by anyone else up to the present time, so far as grading rules for Ontario are concerned.

Perhaps the plan, as then conceived was faulty in that it may have started at the wrong end of the ladder, so to speak. It seemed to those who took an interest in the matter at that time that the proper people to draw up and put into effect a set of grading rules were the manufacturers. It may be, however, that an equally logical way to introduce standard grading rules would be by enlisting the services of those who are closer in touch with the consumer. It is now likely that a plan of this nature will be tried in the near future, for the trade in Toronto are considering definitely a plan for drawing up and putting into force a set of grading rules which shall be known as the grading rules for Toronto, shall have the endorsation of the Toronto Board of Trade and be fathered by the Lumbermen's Section of the Board. Whether such a plan is feasible or not remains to be seen. In the light of trade history in the United States we can see nothing to prevent it from being put into effect and having possibly a far wider application than simply among the trade of Toronto. The successful introduction of a set of grading rules for Toronto could not be brought about without, to a great extent, standardizing the grading of lumber throughout the whole province of Ontario. The chief woods which it is proposed to include in the Toronto rules are pine, spruce and hemlock.

If anything were wanted in the way of an argument or proof of the value and importance of adopting grading rules by means of which to standardize the trade it could be had in the case of the hardwoods, which have been subjected to standardized grades by the two great hardwood associations of the United States. Before these grading rules were put into effect the hardwood trade both in the United States and Canada was in a condition of chaos. No one knew what was meant by any so-called grade which might be mentioned in connection with a transaction. The only way in which to know what one was purchasing was to see the stock beforehand. Nowadays one has only to mention the grade of hardwood that he wants and both parties can understand exactly what stocks are to change hands, even though the transaction be completed by correspondence or telephone and the purchaser may not have seen the stocks. In fact, the middleman may purchase hardwoods without seeing them and depend upon them giving satisfaction to his customer when they are delivered. These are the elementary benefits secured by a definite set of grading rules and they ought to appeal to everyone in the business.

For some reason which we have never been able to appreciate, but which have been explained to us time and again by parties who think that a uniform set of grading rules would in some mysterious manner do an injustice to them by depriving them of their own right to grade stocks as they see fit, or as their predecessors have graded them, the efforts to standardize grading rules in Ontario have been of no avail. Surely it is worth while providing by standard rules a means of simplifying transactions and reducing the possibilities of a disagreement, to say nothing of making it much more difficult for an unscrupulous merchant whether he be manufacturer, wholesaler, retailer, jobber or scalper to sell one kind of stock and deliver another. As things stand today the path of the man who wants to be dishonest with his customer is almost a primrose one, in the lumber business. He knows that not even a court of law can clear up a dispute about a grade of lumber, because there is no definition of what such a grade may be.

Of course it is every man's business who buys lumber to know lumber when he sees it, but he often wants to buy when it is impossible to inspect the stock personally and he wants to know, just as any other business man wants to know, that he is getting in return for his money just what he is expecting. In almost every other line of business the tendency has been for many years in a direction directly opposite that which has prevailed in lumber. Catalogues and samples have made it possible for the purchaser to know just what he is getting before he parts with his money. Why should it not be so in connection with lumber, especially when there is no valid reason against it, outside of the difficulty of drawing up the rules in the first place, a difficulty which can surely be overcome by conscientious effort?

In the past, the lumber business has lost millions of dollars worth of trade to substitute materials. Unless business methods are simplified in many ways, one of which is the adoption of grading rules, the consumer will turn more and more to substitutes, for, after all, the consumer is the one who suffers most in the long run. With a set of grading rules in force, a consumer of lumber, that is to say a man who uses it as a raw material for his factory, or as a building material, will have himself to thank if he does not get value for his money, and if he finds that he has been purposely defrauded, he will have a definite standard upon which to base his claims, if he thinks fit to take the matter before the courts. So far as we can see the case for standard grading rules is complete and unanswerable and we hope that the Toronto trade will be able to put the plan into effect and that their example will waken up those others in the trade and industry who have blocked the proposal in the past.

Lumber Business Lacks Co-operative Publicity

Nothing has been more noticeable in connection with the lumber markets of Canada and the United States during the last few years than the rapid fluctuations in prices and the uncertainties which seem to be inherent to the lumber industry and trade. During these extreme fluctuations in demand and price the conditions of supply have apparently defied anything in the form of regulation, with the result that the industry rises and falls between prosperity and depression and seems to be beyond the working of any ordinary law which will ensure a comparatively long period of average stability and success. The conditions bringing about this state of affairs are to be found inside the lumber industry itself, the result largely of the manner in which it has developed from a small industry to a world wide one, with nothing done on a large scale to develop its methods, in proportion to the increase in its importance. Salesmanship methods connected with the lumber industry have been developed in pretty much the same manner as those in connection with other industries, but the industry itself, that is to say, its production end, has, to a large extent, lagged behind in the matter of co-operative regulation. Logging and manufacturing methods. from a practical point of view have gone ahead of late years, but the conditions of tenure in connection with the ownership of timber, the methods of protection against fire and other forest losses, the methods of control of cutting operations, and, most important of all, the regulation of the quantity of timber that shall be cut and placed upon the markets in the shape of lumber, are all working still at cross-purposes to prevent the industry from becoming anything like as stable as it should be. The result is that in a period of reduced demand and low prices, the evils of depression are greatly magnified because of the industry's inability to help itself.

The tendency of association work in the United States during the last few years has been to give this matter more attention than in the past. Advertising campaigns to promote the use of lumber have been commenced and are showing good results, and they promise to have, in the long run, a much more significant result than the chief one for which they were designed. They will undoubtedly cause greater use of lumber, but they will also educate the lumberman himself, that is to say the manufacturer, the wholesaler and the retailer in such a manner as to show him far more clearly the ways in which the opportunities of the past have been neglected. Advertising of lumber will show the lumberman chiefly, when it has been well worked out, that the greater the amount of co-operation they can work out among themselves, the greater will be the beneficial results. It will show them that, in connection with over-production, the chief factor has been the impossibility of getting anything in the form of a definite conception of the production of the country and its relation to the demand. It will show them that, working in the dark as to this important point, the lumberman has been driven by the force of circumstances to consider his manufacturing operations from his own individual point of view, taking into consideration only the production of lumber and the marketing of it, irrespective of whether he is doing so to his own best interest, to say nothing of the interests of others engaged in the same industry. The way in which these conditions have led to the use of one kind of lumber for pruposes for which other kinds were better suited, leading to dissatisfied users and the ultimate use of substitutes, is now fairly well understood by the lumber industry, thanks to what their own advertising efforts have taught them.

We might go into this situation at far greater length and not commence to exhaust it. We have only sought to indicate it with the idea of commending the tendency which is developing so widely of late towards co-operation and the advertising of lumber products in the United States. We would like to see a similar development in Canada. We believe that the lumber industry will not be in anything like its proper place until its advertising efforts have been subjected to the fullest possible measure of co-operation, and its production activities have been subjected to co-operative control to an extent far beyond that which at present exists.

The tendencies toward both of these goals are quite definite in the United States today and to a small extent also in Canada. They were well put recently, in an address by Mr. E. A. Sterling before the National Lumber Manufacturers' Association.

"The depressed state of the lumber market for the past few years," he said, "has reacted unfavorably on the systematic production of wood crops. There has been overproduction of lumber, greatly reduced demand and low prices, which have made, in many regions, even incomplete utilization of standing timber unprofitable. The lumbermen have been facing the most critical period in the history of the industry, and their success or failure in devising ways and means for the betterment of conditions, and the stabilizing of the lumber market, will have a very marked influence on the future development of forestry."

Mr. Sterling then reviewed the unfavorable conditions as they affect what he said is the second largest manufacturing industry in the United States, with an annual output valued at more than one billion dollars, and represented by nearly 80,000 manufacturers and distributers of forest products. This analysis brought out the fact that because of the magnitude of the industry, and the many individuals and corporations involved, the lumber market is unable to adjust itself to varying conditions of supply and demand. It was also shown that there has been no organization of lumbermen, which, in any way, attempted to regulate prices, but that instead of this, and because of the magnitude of the business and the many interests involved, there has been overproduction, which demoralized the lumber market.

Another condition which has not been given much consideration by foresters is the competition of building materials which take the place of wood. It was explained that during the past few years there has been a very great development along these lines, and that the substitute people are spending millions annually for advertising and publicity in order to make a market for their material, and they have succeeded to such an extent that lumber is permanently replaced in many places where it has had universal use.

The lumber industry is now following the modern practice adopted by other manufacturers in marketing their products. Mr. Sterling outlined the policy and plans of the lumbermen in this regard as follows:

"The lumbermen are now fully awake to this situation, and have not only organized a defense, but are launching an educational publicity propaganda which will be an offensive movement in behalf of wood products. Practically every popular magazine and many newspapers now carry lumber advertisements, and with this publicity, which tends to create a desire on the part of the ultimate consumer to use lumber, goes service and information which will enable the buyer to get greater satisfaction and better use of the lumber he buys. The trade extenion propaganda of the lumber industry is founded on the common sense policy that where lumber is as good or better than any other building material, it should unquestionably be used; that where by treatment to prevent decay or retard fire, or by any other processing or adaptation, it can be made entirely suitable, it should also be used, and that where it is not safe or economic, or otherwise suitable, some other material should take its place."

In Canada we have had very little in the shape of definite co-operation and organization along the lines that have been undertaken in the United States. The B. C. Forest Service has been a pioneer in this direction and has secured remarkable results in a comparatively short time. Why should not the organizations of lumbermen already existing in Canada take a more national view of their work and co-operate to develop a similar movement for the improvement of the industry and incidentally for the better economic utilization of the timber resources which are yet left to us.

At the annual meeting of the Hardwood Manufacturers' Association, held recently at Cincinnati, Ohio, the president, in his address spoke in part as follows:—The situation that we look upon today is very different from that of one year ago. The clouds that then darkened and depressed the business life of our country, and especially of our industry, have lifted and I cannot but feel that all signs now point to a period of prosperity such as we have not experienced for years. The past three months have seen the inert and exhausted lumber industry spring back to life and strength with a vigor that means prosperity for some time to come. Orders are plentiful. For some kinds and grades almost too plentiful, for the pendulum has swung far to the other side, and instead of a surplus of stock at the mills, as there was a few months ago, there is now actually a shortage of many items.

When the Panama Canal is again open to traffic it is probable that some of our exporters will pay attention to the Cuban market for lumber. A letter has been received from a leading lumberman of Havana asking quotations on timber and suggesting $23 as a popular price for spruce c. i. f. Havana.

Toronto Trade Discuss Inspection

Will Consider Adopting Definite Grading Rules for Pine, Spruce and Hemlock

The Lumbermen's Section of the Toronto Board of Trade held a meeting on February 4th at which the vice-chairman Mr. J. B. Reid introduced a discussion upon grading rules for the inspection of lumber. Mr. Reid, who occupied the chair during the meeting, expressed the opinion that it was time the Lumbermen's Section should take up the question of the inspection of pine, spruce and hemlock lumber and appoint a committee to draw up a set of inspection rules, which should be adopted by the Section and established as the recognized rules for the city of Toronto. If they carried out such a proposal they would be in a position, whenever there was any dispute, to point to the rules as a recognized standard for settling all differences of opinion. This has been a long felt want in connection with the trade of Toronto and in fact of the whole country. He suggested that they should appoint a committee to work upon the problem for as long as might be necessary in order to draw up rules that would suit the majority of the trade. The trouble arising out of the settling of claims would then we minimized wonderfully, and once such a system of grading had been adopted its influence would soon be felt in connection with all branches of the trade, that is to say, retail, wholesale and manufacturing. Not only would many of their trade problems be solved, but by establishing a set of rules they would do a great deal to make the trade more pleasant and to develop and maintain pleasant friendships among members of the trade.

Mr. A. E. Clark suggested that it might be well also to try and have the Canadian Lumbermen's Association take up the same matter and possibly endorse the same rules.

Mr. Reid thought that their best plan would be to get something going in Toronto first of all, and when they had been successful with this he believed that the other associations or groops of lumbermen would naturally fall in line.

Mr. A. E. Gordon approved of the idea and suggested that as a guide they might make use of the rules which were drawn up a number of years ago by the former Lumbermen's Section of the Toronto Board of Trade.

Mr. A. E. Clark suggested that it would be a good thing when a committee had been appointed to have them call in a number of the best inspectors employed at the large Ontario mills, so as to have the benefit of their ideas.

After considerable further discussion upon the subject it was decided to leave it over until the following meeting and to notify all members that the question would be brought up, so that a good attendance could be had.

At a meeting of the Section held on the previous Friday, Mr. W. J. Lovering reported on behalf of the committee appointed to cooperate with the city architect of Toronto in securing information regarding the strengths of various Canadian timbers. Mr. Lovering stated that they had had an interview with the city architect who informed them that Mr. John S. Bates, superintendent of the Dominion Government Testing Laboratory at McGill University, Montreal, was conducting an extensive series of tests of Canadian timbers. The tests of Douglas fir had now been completed and the results were ready to be published. The next series of tests would probably be upon red and white pine, or spruce. The Section decided to write to the superintendent of the Testing Laboratories recommending that the next tests be made upon red and white pine.

Interesting short addresses were delivered by Mr. W. J. VanDusen of the B. C. Forest Service who explained the work of the B. C. Lumber Commissioner's office recently established at Toronto; Mr. A. E. Gordon of Terry and Gordon, Toronto, and Mr. Hugh A. Rose, eastern representative for the Canadian Western Lumber Company, Fraser Mills, B. C., the latter two having recently returned from a visit to B. C. and having found the lumber trade in the west permeated with optimism regarding the prospects for a splendid year's business during 1916.

Stiffening Up Quebec's Fire Protection Regulation

Quebec limit-holders are asking the Provincial Government to make several changes in the regulations regarding the protection of the forests from fire. Hon. Jules Allard, Minister of Lands and Forests, has received these proposals with favor, and practically pledged himself to bring them in at this session as a Government measure. The limit holders ask that the law shall prohibit the setting out of settlers' clearing fires between April 1st and November 15th, without the written permission of a qualified ranger. The law at present makes the "permit season" only from April 15th to June 15th, and after September 1st. That is, the present law fails to specify any form of control whatever over settlers' fires between June 15th and September 1st. The limit holders ask that the entire season of fire danger be blanketed. Settlers are today the greatest enemies to forest preservation in Quebec.

The limit holders are asking also that minimum fine for failing to obey the requirements in respect to permits shall be one hundred dollars. The present fines are mostly trifling, perhaps $2 and $5, and do not accomplish their purpose. It is asked that no option of fine shall be allowed a man found guilty of setting fire to the forest in order to provide himself employment at fire fighting. Twelve months should be the minimum sentence. It is asked also that rangers or other forest officers should have authority to summon any male adult to help extinguish fires, such persons to receive the regular remuneration.

Annual Meeting of Mountain Lumbermen

At the annual meeting of the Mountain Lumber Manufacturers' Association, held recently at Nelson, B. C., officers were elected for the ensuing year and the secretary's report on the activities of the association was presented. In the report of Secretary I. R. Poole the following figures showing the lumber cut, shipped and the stock on hand at the end of the last four years were given:

	1912 Feet.	1913 Feet.	1914 Feet.	1915 Feet.
Lumber cut	420,000,000	386,000,000	235,000,000	145,000,000
Lumber shipped	488,000.000	335,000,000	210,000,000	253,000,000
Stock, Dec. 31.	188,000,000	218,000,000	243,000,000	135,000,000

In making a comparison of the above figures it was pointed out that there was a reduction in cut of 90,000,000 feet in 1915 as against timber cut in 1914, and an increase in the sales of about 43,000.000 feet, while the stocks were 108,000,000 feet less than at the same date in 1914. It was stated that the net value of the shipments of the mountain mills during 1915 amounted to $3,162,000, and that the figures of importation of lumber from the United States during the last year showed a decrease of 64,000,000 feet in comparison with those of 1914. This was accounted for by the low price of the mountain lumber.

Referring to market conditions during the last year the report said:

The year opened with the lumber industry continuing to lag and it was not until the crop on the prairie was assured that any great improvement was noticed. During August, September and October a strong demand for lumber developed, chiefly for the erection of granaries and other buildings for the caring for the great crop. This had the effect of greatly steadying the declining market.

At the present time, however, prices are far below the figures obtained in the more favorable years. The net returns for 1915 show an average of $3 lower than the prices of 1914. Business, too, has moderated during the last two months as compared with the previous three months, but owing to the real and permanent improvement in general business conditions in the country as a whole it is reasoable to expect a fairly active demand for the next few months.

The future is brighter than it has been for some years, but there is nothing to warrant manufacturers increasing their output or the erection of new mills, as there is now ample producing capacity to care for the demands of the near future. The great need of the lumber business is a staple market and a reasonable volume of production.

Reference was made to the work of the forestry branch of the Provincial Government, which last year began an active advertising and market extension campaign. An office was opened in Regina and a commissioner appointed for the purpose of keeping the district in touch with the consumer and to encourage the use of British Columbia lumber. In this connection a unanimous vote of thanks was passed by the members to the minister of lands and the members of the forestry branch at Victoria for the unceasing work that had been directed toward the establishing of a better market for British Columbia lumber on the prairies.

The following officers were elected:

President—C. D. McNab.

Vice president—A. J. Lammars.

Secretary-treasurer—I. R. Poole.

Executive committee—H. H. Ross, E. L. Staples, W. Mark DeCew and L. D. Rogers.

Ever since the war broke out members of the Forest Service of British Columbia have been leaving on furlough for the bigger job overseas, and they are still doing so. Out of the regular or permanent staff, which in the summer of 1914 before the war numbered about 170 (including female clerks and stenographers), almost one-third have enlisted to date. In addition over 20 members of the temporary or summer staff of guards, patrolmen, etc., are known to have enlisted, and it is very probable that as many more have joined of whom no information is now available.

New Toronto Wholesalers, J. P. Johnson & Son

J. P. Johnson, Toronto, Ont.

A. K. Johnson, Toronto, Ont.

J. P. Johnson and Son is the name of a newly formed wholesale lumber firm which has opened offices at room 1203 Traders Bank Bldg., Toronto. The members of the firm are Mr. J. P. Johnson and Mr. A. K. Johnson, both formerly belonging to the firm of Campbell and Johnson, Traders Bank Bldg., Toronto.

Mr. J. P. Johnson is one of the best known wholesale lumbermen in Ontario. He was born in 1864 at Picton, Prince Edward County, Ontario, on December 11th. His early days were not unlike the early days of all normal young Canadians. He attended public and high school ,and when his education was completed, commenced his business career with his father, Mr. J. S. Johnson in the retail lumber and coal business at Picton. From that time on, Mr. Johnson has been connected continuously with the lumber business. In fact from the time he was eight years old, he has been absorbing information and experience in connection with lumber. He was 16 years of age when he commenced to earn money in his father's business and he devoted his time to this employment for a period of four years, until his father sold his business to the Rathbun Company. Then he set out to earn a livelihood elsewhere and secured employment with the well known firm of J. K. Post & Company, Oswego, N. Y., wholesale lumber dealers. With this company he had charge of the inspection of eastern shipments and thus obtained an intimate knowledge of a wide variety of stocks.

After four or five years of inspection work, Mr. Johnson went on the road and quickly proved himself a natural born salesman. Subsequently he was engaged for about seven years in the wholesale hardwood business. Then he went to Toronto and has continued in the lumber business there, up to the present time. In Toronto, he was engaged with the Victoria Harbor Lumber Company for six years, acting as travelling salesman and becoming one of the most efficient and widely respected men upon the road. In January 1907, Mr. Johnson became a member of the firm of the Campbell and Johnson, whom he represented upon the road until the present year when he made arrangements for starting in business on his own account with his son Mr. A. K. Johnson.

Mr. A. K. Johnson was born in Brighton, Ont., in 1890 and his home has been in Toronto for the past eighteen years. He was educated in Toronto, and previous to associating himself with the firm of Campbell ad Johnson he was employed by the Canadian General Electric Company for four years, travelling for them in connection with their branch of illuminating engineering.

In order to become familiar with the requirements of the retail lumber trade Mr. A. K. Johnson spent several months in the employ of a Toronto firm of retailers. He has also spent considerable time in employment at various mills in the north country so as to gain experience in connection with the production end of the lumber business. In Toronto he has devoted much of his time to calling upon the city trade. He has also called occasionally on the eastern and western Ontario trade. Mr. A. K. Johnson has many of the characteristics and qualifications of his father and we feel certain that he will soon make for himself as fine a reputation as a lumber salesman as his father has made before him.

A fine large office calendar has been sent out by the Atlas Lumber and Manufacturing Company, Cincinnati, Ohio, to their trade friends. The calendar bears an enlarged photograph showing the company's plants and yards.

Selling White Cedar Shingles in Ontario

A. H. Gilham, Toronto, Ont.

We are pleased to publish herewith a portrait of Mr. A. H. Gilham, who has recently been appointed Western representative for the Canadian White Cedar Shingle Association, and who is now at Work in Ontario telling the trade about the good qualities of the Eastern Canadian shingles. Mr. Gilham, whose business address is 78 Pearson Ave., Toronto, has, during the past twelve years been connected with the furniture business, representing the Andrew Malcolm Furniture Company, makers of high grade furniture, Kincardine, Ont. Before going into the furniture business Mr. Gilham had an extensive business experience as a traveller throughout Western Canada from Vancouver to Winnipeg. His first connection with the lumber business was with the Moore Lumber Company of Detroit, Mich.

Being a man of wide experience as a commercial traveller, and having such an excellent line of goods to handle as the products of the Canadian White Cedar Shingle Association, we feel sure that Mr. Gilham will quickly make an important place for himself among the trade of Ontario. The appointment of a western representative, with headquarters at Toronto, is in line with a decision recently reached by the Association to work the Ontario market far more closely than they have in the past. They expect to place extensive quantities of their shingles in Ontario in future.

Lieut. Joseph Power Back from the Front

After going through the trials and hardships of trench warfare in France and Flanders for nine months, Lieut. Jos. Power, son of Mr. William Power, M. P., Quebec, P. Q., returned home recently suffering from neurasthenia. While apparently in good health otherwise, Lieut. Power's nerves are shattered and, after spending over a month in hospital in France and England with a severe attack of trench fever, he was granted two months' leave. While in the trenches Lieut. Joseph Power frequently met his younger brother, Lieut. Charles (Chubby) Power, of the 3rd Battalion who relieved him in the trenches on many occasions. Chubby Power is now in hospital in England. He is suffering from eighteen shrapnel wounds all over his body, but the most serious are in his legs. In a letter which was received from Chubby recently, he states that he is improving rapidly.

W. Y. Lloyd, formerly with The Quincy Adams Lumber Company, has opened an office as a wholesale lumber dealer at 51 Yonge Street, Toronto.

A dispatch from Boston, Mass., states that an offer of five cents apiece for cast-off railway ties has been received by the Boston & Maine Railroad from the British Government. Formerly the railroad burned all its old ties, but orders have now been sent throughout the system directing that they be saved. Half a million ties are needed for use in constructing trenches in Frances.

Prosperity Signals—Full Steam Ahead

Toronto Customs receipts in December amounted to $2,128,000. Previous record, $1,929,000.

Canadian "Savings Deposits" in November, $714,219,000. Previous record $710,336,000.

First Dominion War Loan, $50,000,000. Over-subscribed by $55,000,000.

Western wheat crop, 304,200,000 bushels. . Previous record, 200,000,000 bushels.

Canadian exports in November, $94,436,000. Previous record for any month, $60,402.000. (Nov., 1914, $46,242,000; 1913, $59,079,000).

December bank clearings at Winnipeg $261,568,000. Previous record, $245,962,000.

C. P. R. net earnings in October, $6,579,434. Previous record for any month. $5.602,858

Dominion Government revenue for November, $17,072,456, the largest total for one month in the country's history.

Lieut. Percy Harper Wade Now at the Front

Lieut. Percy Harper Wade, Quebec, P.Q.

Lieut. Percy Harper Wade, of the Quebec timber shipping house of The Harper Wade Export Company, is one of the many members of the Canadian lumber business now on active service at the front in the cause of humanity, liberty and justice. Born in 1887, educated in the High School Quebec, and having served an apprenticeship at New Liverpool Shipping Cove and in the office of The McArthur Export Company, Limited, he became a member of the firm in 1911. His commission as Lieutenant in the Queen's Own Canadian Hussars dates from 1907, he having entered that force as a trooper. On the formation of the Fifth Mounted Rifles for overseas service he joined that body as First Lieutenant in B Squadron, and drilled at Sherbrooke and Valcartier. When it was decided to send the Fifth forward for trench duty, instead of cavalry service, in common with the other officers and men he responded to the call, and is now somewhere in France. His father, Edward Harper Wade, is the senior Quebec timber exporting merchant, and we trust that after the final and decisive refeat of the Germans, his son will rejoin him in the old business.

Toronto Customs Revenue Increased

	1914	1915
January	$1,487,270	$1,144,225
February	1,532,960	1,387,040
March	1,740.522	1,574,855
April	1,584,895	1,502,797
May	1,462,769	1,485,243
June	1,387,787	1,517,623
July	1,449,422	1,487,829
August	1,684,122	1,611,606
September	1,113,865	1,464,342
October	1,086,944	1,668,334
November	928,407	1,929,513
December	1,017,096	2.128,050
	$16,476,059	$18,901,457

Increase for year $2,425,398
Increase over Dec., 1914 1,110,954

During January 1916 the revenue made a new high record of $2,427,872. During January 1915 the revenue was $1,144,225. The previous monthly record was that of December 1915, namely $2,128,050.

Annual Meeting of Forest Engineers

The annual meeting of the Canadian Society of Forest Engineers was held recently in Ottawa. Mr. R. H. Campbell entertained the members of the Society at dinner after which the business meeting was called to order by the President, Mr. Clyde Leavitt. The guests of the evening were Mr. Robson Black, Secretary of the Canadian Forestry Association and Messrs. Bates and Kynoch of the Dominion Forest Products Laboratories at McGill University. Mr. G. A. Gutches, Director of the New York State Ranger School at Wanakena was one of the American members of the Society present.

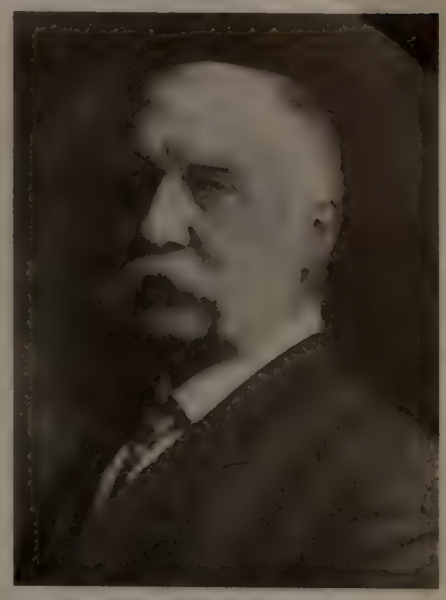
The Secretary's report showed the Society to be in a growing and flourishing condition, eighteen new members have been added in the past year, Quebec and Maritime Provinces showing the greatest number of new members. The total membership is now eighty-seven.

It was decided to issue a monthly news letter to the members and to publish a history of the Society. A new caliper for measuring trees, the invention of one of the members was shown. Mr. R. H. Campbell was elected Chairman of the Ontario Executive.

An informal discussion on the Forestry Situation in New Brunswick, was the feature of the evening, expert opinions being given as to what the needs of the Province were and how they could be carried out in the most practical and economical manner.

It was reported that about fifteen per cent. of the Society's membership was either at the front or had enlisted.

Sudden Death of Robert Macfarlane, Montreal



The Late Robert Macfarlane, Montreal

By the sudden death on February 5th of Mr. Robert Macfarlane, president of R. Macfarlane and Company, Limited, Montreal has lost one of its oldest lumbermen. Mr. Macfarlane died from heart failure, due to excitement. With two employees he ascended a ladder to see whether a chimney fire on premises adjoining those of the firm was likely to spread; the exertion and excitement proved too much for him, and he collapsed. He was brought into the offices, and on medical aid being summoned it was found that he had passed away.

Mr. Macfarlane was a native of Montreal—he was born in 1842—and was educated at the Glasgow Academy, Glasgow, Scotland. For 42 years he was engaged in the lumber, sash and door, mouldings and hardwood flooring business. This was established in 1874, and during the earlier years Mr. Macfarlane worked exceedingly hard to make the venture a success. The business was started on a site at the corner of St. James and Richmond Streets, and has been continued there ever since. The premises comprise commodious offices and saw and planing mills. The business expanded steadily and the equipment was gradually increased. The firm is now one of the largest of its kind in the city. In 1905 the firm was converted into a limited liability company, with Mr. Macfarlane as president.

During the past three years Mr. Macfarlane took only a small share in the active direction of affairs, this being undertaken by Mr. Fred S. Macfarlane, the only son, who is vice-president and managing director.

The late Mr. Macfarlane was a man of very quiet disposition, taking little or no part in public activity; a hard worker especially during the early portion of his business career; and exceedingly well liked by business friends and employees.

An Interesting Legal Decision

An interesting law suit regarding the responsibility for losses sustained by loggers on account of the foundering of a tug on which they were travelling to their camp, has just been concluded in the supreme court of B. C. Action was brought in this case by a number of loggers against the Terry Logging Company, the claims amounting to $1,222, covering the loss of their effects and wages. When it foundered the tug was towing a large gasoline launch, and the evidence brought out was that the loss of the tug resulted from the frequent breaking away of the gasoline launch. All the loggers and the cerw were saved, having taken refuge in the gasoline launch which was able to out-ride the gale. The plaintiffs claim that the defendents were liable for an error of judgment on the part of the captain in not turning back to port when requested by the loggers to do so after the launch had broken away for the first time. Chief Justice Hunter dismissed the suit on the ground that the plaintiffs had no claim as passengers as the vessel was not registered for carrying passengers and the men were not paying fares. They were getting free transportation to their logging camp on the tug that was carrying supplies.

A Good Word for Canadian Red Cedar

Editor Canada Lumberman: Buffalo, N. Y., Feb. 3rd.

Business has not really started up in this territory for the New Year, but every indication promises a fair business and firm prices.

I had a very nice visit from your representative. When here we got talking about Canadian red cedar from British Columbia. I showed him a piece of 1¼ in. cedar planed on one side, about 45 inches wide. 4 ft. long, that had been in our office for nearly 8 years, under all sorts of conditions and it had not warped, split or checked a particle, all of which proves to me, that you people ought to take into consideration the real worth of cedar.

They are now using gum for gun stock, and I believe this cedar is so far superior to it, that there is no comparison between the two woods.—M. M. Wall, Buffalo Hardwood Lumber Co.

Structural Qualities of British Columbia Fir

By H. R. MacMillan

An address upon "The Structural Qualities of British Columbia Fir" was delivered recently by Mr. H. R. MacMillan, Special Timber Trade Commissioner for Canada, before the South African Society of Civil Engineers, at Cape Town, South Africa. After referring to South Africa's timber supply problem in general, Mr. MacMillan continued in part, as follows:—

The investigation of the properties of Douglas fir now being carried on by the Government of Canada, has not yet been completed, but the published results of many valuable investigations on the same timber by the United States Government enable the writer to lay before the Society data concerning the strength of the timber. The results given for strength tests are taken from Bulletin 88 of the United States Forest Service. The Government of Canada is at the present time carrying on in the National Forest Products Laboratory at the McGill University a series of investigations into the strength of Douglas fir timbers, the results of which will soon be published.

Douglas fir has ben exported to this country for many years under the name of Oregon Pine. The timber is neither a pine nor a true fir, but is the sole important representative of the genus "Pseudotsuga" the specific name being "taxifolia."

The South African civil engineer, who has seen one construction material after another advance in price, or decrease in quality, because of the imminent exhaustion of the supply, will be especially interested to know that in Western Canada alone, the accessible virgin stands of this timber are sufficient for at least seventy-five years' supply of the market at the present rate of consumption.

Four important points upon which engineers will desire to be informed are:—

1. Strength of Douglas Fir.
2. Durability and known service in important works and railroads.
3. Defects or characteristics to be considered.
4. Comparative cost.

Strength

Strength tests carried out on green Douglas fir specimens 2 inches x 2 inches x 30 inches, free from any defect, gave the following results:—

	Pounds per sq. in.
Bending:	
Fiber stress at elastic limit	5,500
Modulus of rupture	8,400
Modulus of elasticity	1,600,000
Compression parallel to grain:	
Crushing strength at elastic limit	3,600
Crushing strength modulus of elasticity	4.100
Shearing	770

Air seasoning to a point where the moisture content is 15 per cent. increases the above strength values by about 35 per cent.

Tests carried out on bridge stringers 8 inches x 16 inches x 16 feet gave the following average stresses:—

Selects:			
Green	4,346	6,753	1,654,000
Air-dry	4,690	7,070	1,644,000
Merchantable:			
Green	3,895	5,878	1,481,000
Air-dry	4,625	6,472	1,567,000
Seconds:			
Green	3,538	5,188	1.328,000
Air-dry	3,740	4,551	1,280,000
All Grades:			
Green	4,000	6,000	1,510,000
Air-dry	4,467	6,327	1,540,000

The grades used were those under which Douglas fir structural timbers are exported from the Pacific Coast of Canada and are given in detail here.

"Selects—Shall be sound, strong lumber, good grain, well sawed. Will allow in sizes 6 inches x 6 inches and less, knots not to exceed 1 inch in diameter; sap on corner one-fourth the width and one-fourth the thickness; small pitch seams not exceeding 6 inches in length. In sizes over 6 inches x 6 inches, knots not to exceed 2 inches in diameter, varying according to the size of the piece; sap on corner not to exceed 2 inches on both face and edge; pitch seams not to exceed 6 inches in length. Defects in all cases to be considered in connection with the size of the piece and its general quality."

"Merchantable.—This grade shall consist of sound, strong lumber, free from shakes, large, loose, or rotten knots, and defects that materially impair its strength; well manufactured and suitable for good substantial constructional purposes. Will allow occasional variations in sawing or occasional scant thickness, sound knots, pitch seams, and sap in corners, one-third the width and one-half the thickness. Defects in all cases to be considered in connectio with the sie of the piece and its general quality."

"Seconds.—This grade shall consist of lumber having defects which exclude it from grading as merchantable. Will allow knots and defects which render it unfit for good substantial constructional purposes, but suitable for an inferior class of work."

The grade almost exclusively imported into South Africa is "Merchantable." This grade, while suitable for all timber construction work, should not be depended upon for higher class construction, such as railway truck and carriage building. The grades adapted for this purpose are the "Selects" defined above and the "Clears" which include only the highest quality of timber and are defined as follows,—"Sound lumber well sawn, one side and two edges free from knots and other defects."

Ten to twenty per cent. of the lumber output of the Douglas fir region will grade "Clears" and "Selects." These two grades are used for shipbuilding, railway truck and carriage building, joinery, flooring and such high-class purposes, where pitchpine is now used extensively in South Africa. No pitchpine is used within 1,500 miles of the Douglas fir region of Canada or the United States, its place for all purposes having been taken by Douglas fir. Douglas fir, however, is now shipped into the pitch-pine producing region for the uses indicated above.

These strength values, together with the comparative lightness of weight of the timber, 33 lbs. per cubic foot, air-dry, the fact that it may be procured in any size, large or small, and the comparative ease with which it may be worked, render it eminently suitable for structural purposes.

Douglas fir may be secured in sizes possible to no other timber. The trees reach a butt diameter of ten feet and a height of 300 feet A flagpole recently presented by the British Columbia Government to the Royal Gardens at Kew was, when cut, 250 feet long and 30 inches in diameter at the top, without a defect. Timbers for harbor works, dredges, derricks, and such uses have been sawn in sizes reaching 60 inches square and running into 20 feet lengths for 24 inches x 24 inches sticks. The greater portion of the timber is however manufactured into the smaller sizes suited for immediate use, such as 1 inch, 1½ inches, 2 inches, 3 inches and 4 inches thicknesses, 4 inches to 16 inches widths and 12 feet to 30 feet lengths. The sizes commonly cut for studding and joints in Canada are 2 inches x 4 inches, 2 inches x 6 inches and 2 inches x 8 inches. These sizes are sold at the same or less prices per thousand feet superficial than the 3 inches x 9 inches which is commonly imported to South Africa and resawn after arrival. The exporting mills of Canada will upon order saw timber to any possible size.

Durability

The durability of Douglas fir may not be described in the same exact terms as its strength. Unfortunately, though it has been exploited for over half a century, no complete records have been kept of the length of service that it has rendered in different uses under varying conditions.

The durability has been affected not only by the conditions of soil, moisture, light and heat, under which the timber was used, but also by the degree to which the timber was seasoned before being used. Thoroughly air-dried timber, of course, resists decay for a longer period than timber put to use while still green.

The development of the Douglas fir region in Canada is of so recent a date, and the changes have been so rapid, involving the demolition of buildings after a few years' use, to make way for better, that it is difficult to obtain many reliable records of old buildings of the Hudson's Bay Company, built half a century ago. Douglas fir timbers were used in these buildings for sills, posts, stringers and are yet sound and in good condition. The annual precipitation, where the buildings stand, is 27 inches, all in the form of rain.

The oldest sawmills in the country were heavily framed with Douglas fir timbers 12 inches x 12 inches to 16 inches x 16 inches. Several sawmills are still in existence, varying in age from 25 to 40 years, in which the Douglas fir timbers are sound and have not been

renewed. The conditions of service have been difficult as the mills all stand in or on the edge of the water, are subject to enormous strains through the handling of 8 to 12 ton logs and the running of heavy machines at high speed. The precipitation in the sawmill district is 60 to 70 inches per year, in the form of rain.

A very important use of Douglas fir in Western Canada is for railroad and highway bridge and trestle construction. Local variations in climate, foundation, and stress, greatly affect the life of such structures. No proper records have been kept of the life of timber structures under varying conditions. Experience shows however, that with no preservative treatment, Douglas fir highway bridges have a life of 15 to 18 years. One case is on record of a highway bridge of Douglas fir constructed 36 years ago and still in use. The life of an untreated Douglas fir railroad bridge is 12 to 15 years.

A good instance of the durability of Douglas fir is afforded by the flagpole which until recently stood in the Royal Gardens at Kew. This pole, of one stick of timber, was over 150 feet high. It was cut on Vancouver Island, British Columbia, in 1860, was erected at Kew in 1862 and stood until 1914, when it was cut down because of decay at the base. The timber which will stand 52 years in the climate of London, exposed to the stresses felt by a flagpole over 150 feet high, can be said to be fairly durable.

Douglas fir railroad sleepers are used in extremely large quantities by Canadian and American railroads, the consumption having risen so high as 15,000,000 sleepers per year in 1907. By far the greater quantity are used untreated and often very imperfectly seasoned. Under such conditions, with an axle load reaching 50,000 pounds, the life varies from 8 years on mountain tracks under a severe climate presenting great variations of heat and frost and moisture, to 15 years in comparatively level tracks in the prairie.

Douglas fir sleepers are now being creosoted both for use by Canadian railroads and by English, Continental, and Indian railroads. The usual specification treatment by creosote under a boiling and pressure process. the temperature not exceeding 220 degrees F. in order that the strength of the wood may not be injured. The treatments found most satisfactory have been 8 lbs. and 10 lbs. of creosote per cubic foot, which gives a penetration sufficient to protect wood against white ants, teredos, or decay.

The creosoting plant now engaged in the export trade in the Douglas fir region of Western Canada possesses a capacity of between 500,000 and 600,000 sleepers per year. The impregnation of the timber is carried on in two steel cylinders, each 100 feet long, 7 feet 6 inches in diameter, fully equipped with steam vacuum and pressure pumps and heating plant which makes it possible to maintain the timber and the creosote in the treating cylinders at any desired temperature and pressure.

British creosote is used. The purchaser may specify any desired grade of creosote, method of treatment or absorption per cubic foot. Should the purchaser desire it, the British Columbia Government is willing to arrange an expert inspection of the timber and the creosote before creosoting, of the process of creosoting and of the average penetration and absorption of oil per cubic foot in order that the specifications may be faithfully observed and the interests of the purchaser protected. Such inspection has been arranged for on behalf of the Bengal and North Western Railway and the Railway Board of the Government of India.

Creosoted Douglas fir sleepers have been used by the Great Western Railroad of England for twelve years and have again given excellent satisfaction. Since the outbreak of war and the consequent increase in price of Swedish sleepers, the Great Western Railroad has filled all its requirements by the use of creosoted Douglas fir.

The increase in the price of Jarrah in India has led to the use of creosoted Douglas fir, both by the Indian Railway Board and the Bengal and North Western Railway. About 2,000,000 of these sleepers have been used in India during the past three years and up to the present, where the creosoting has been carefully conducted, the sleepers have resisted both the white ants and decay.

The writer has not learned what is the life of the creosoted Baltic sleepers used in South Africa, but would expect that creosoted Douglas fir sleepers would give a longer service than Baltic. because the timber is harder and would resist mechanical wear to a greater degree.

Douglas fir piling is used almost exclusively on the Pacific Coast of Canada in railroad, harbor, and wharf works. The life in teredo infested water is six months to three years unless creosoted. There is now in the office of the Chief Forester at Victoria, British Columbia, a section of an 8 inches x 8 inches creosoted Douglas fir pile, driven in the wharf at Chemainus Harbor, Vancouver Island, in 1897 and taken up in March 1915. Uncresoted Douglas fir piles in the same wharf must be renewed in from 8 months to 3 years, being in that time destroyed by teredos. The creosoted pile referred to, though only three or four feet from uncreosoted piles which were constantly renewed because of teredo attacks, showed no sign of teredo work and was as sound as the day it was driven. All piling except the most temporary is now creosoted before being used. The top of a creosoted pile is usually fitted with a ring, and the upper 8 to 10 feet is sometimes also wound with 15 to 20 turns of wire to prevent the splitting of the pile in driving. Should the pile split, the other layer of creosoted wood is opened and teredos are enabled to enter the uncreosoted interior. Creosoted Douglas fir piling is now used extensively in British harbor works. The piling and similar heavy timber used in the construction of the Panama Canal was Douglas Fir.

This timber is now considered one of the most satisfactory in North America for mining purposes. The life in various mines of course varies widely, both because of the pressure which in some cases crushes the timber in a few days and because of the conditions conducive to the development of fungi which in some mines limit the life of timber to a few months. Douglas fir will however, if not subjected to a crushing strain, usually give a life in a permanent situation in a mine of 5 to 8 years even if not given a preservative. Where a longer life is desired the timber is usually treated with creosote, a 3 per cent. solution of zinc chloride, or carbolineum. The creosote treatment is now the most general.

A class of timbers subjected to much the same severe conditions as mine timbers, are the snowshed timbers used to such an extent to protect the mountain railroads from heavy snowfall, snow slides or rock slides. The timbers in the snowsheds are frequently subject to great pressure, are always damp and very liable to fungus attack. Snowshed timbers painted with carbolineum have given a life of twelve years in the Canadian Rockies and are still in sound serviceable condition.

Wooden freight cars are manufactured in large quantities in Canada, both for home use and for export. The chief timber used in their construction is Douglas fir, for carsills, framing, flooring, siding, and roofing.

Tests of carsills, 5 inches by 8 inches by 180 inches give the following strength values:—

Number of tests.	Rings per inch.	Proportion of summer wood.	Moisture content.	Weight per cubic foot.		Fibre stress at elastic limit.	Modulus of rupture.	Modulus of elasticity.
				Green weight.	Oven dry weight.			
	No.	Per cent.	Per cent.	Lbs. per cu. ft.	Lbs. per cu. ft.	Lbs. per sq. in.	Lbs. per sq. in.	1,000 lbs per sq. in.
Average, 41	13.2	42	30.0	36.7	28:2	3,833	5,371	1,561

No trouble has been found with the timber either because of lack of strength or length of durability in the severe Canadian climate. It is now accepted for this purpose by the Great Western Railroad of England, the Paris-Lyons-Mediterranean and State Railroads of France. It has been found cheaper, lighter and quite as durable as pitchpine.

Characteristics to be Considered

The great size of the Douglas fir trees places this timber in an enviable position for freedom from defects. No timber is however absolutely free from defects and all timber varies in quality with certain factors. A knowledge of the importance to attach to various characteristics of the timber must lead to its wider use.

The strength of Douglas fir varies directly with its dry weight; the heavier the wood the greater is its strength.

The strength of Douglas fir does not vary with the rate of growth to such an extent as is commonly supposed. It may be stated however that as a rule timber which averages less than 8 annual rings to the inch is below the average in strength, that the strongest timbers are usually found to average between 12 in 16 annual rings to the inch and that the timber which averages over 16 rings to the inch is again below the average in strength.

The two defects of Douglas fir to be considered most seriously in grading the timber for structural purposes are knots and cross grain. The size and position of the knots and the condition of the wood around them are to be taken into consideration. The presence of knots affects the strength of the timber in compression parallel to the grain as follows:—

Knots over 1½ inches diameter ..... 22 per cent.
Knots ½ inch to 1½ inches diameter ..... 14 per cent.
Knots under ½ inch diameter ..... 6 per cent.

The decrease in compression strength at the elastic limit is:—

Knots over 1½ inches diameter ..... 22 per cent.
Knots ½ inch to 1½ inches diameter ..... 13 per cent.
Knots under ½ inch ..... 5 per cent.

The presence of knots in beams affects chiefly the modulus of rupture.

The fibre stress at the elastic limit and the modulus of elasticity are less influenced by knots than by the quality of the wood.

The conclusions to be drawn from the investigations into the strength of Douglas fir are that,—

(a) Sound knots of one inch in diameter or less which do not cause a marked disturbance in the grain of the timber should not be regarded as defects in structural timber.

(b) Sound knots greater than one inch in diameter should not be regarded as defects when they occur on the vertical faces of the beam and at a distance from the edge equal to one quarter the height of the timber.

(c) Knots and cross grains which interrupt the continuity of the grain within two inches of the edge should not be admitted except in the lowest grade.

(d) Diagonal grain, due to sawing, if of a greater slant than 1 in 45 should not be allowed in the higher grades.

The availability of Douglas fir for South African construction purposes must depend upon the price. The amount of accessible timber in the Douglas fir region, the great number of mills manufacturing it (over 4,000), the entire absence of any working arrangement among the mills to restrict output to demand has and must continue to operate to bring about low selling prices. The price of the structual grades of timber is now F. A. S. (free alongside ship) about five pence to eight pence a cubic foot, depending upon the sizes ordered. These prices may be expected to continue with little or no increase, for many years.

As the facilities for creosoting timbers on a large scale for use in different parts of the country, do not exist in South Africa, creosoted timber would need to be imported in that form. Creosoted timber, for railway sleepers or piling varies according to the price of creosote and the character of the treatment specified, but on the average in normal times might be expected to cost 1s. 4d. per cubic foot F. A. S.

The prices ex. ships slings African port for various classes of timber would be, on a normal freight rate of 60 shillings a thousand feet superficial or board measurement (12 board feet to the cubic foot).

Sizes 10 inches by 10 inches to 14 inches by 20 feet to 40 feet .....1s. 2½d per cubic foot.
Creosoted timbers, above sizes.....2s. 1d. per cubic foot.
Large sizes .....about 1s. 6d. per cubic foot.
Uncreosoted sleepers 7 feet by 10 inches by 5 inches ..... 2s. 10d. each.
Creosoted sleepers, 7 feet by 10 inches by 5 inches ..... 4s. 11d. each.
Carsills and car flooring.....1s. 8d. per cubic foot.

These prices are wholesale. To them must be added the handling cost at the unloading port, the profit of the timber importer and the cost of delivering the timber to the point of consumption. Even with these added charges it will probably be found in South Africa that Douglas fir will for years be one of the cheapest construction materials, not only so far as initial cost is concerned, but also when cost per year's service is reckoned.

Forest Protection in Canada

The Commission of Conservation has just issued a report on "Forest Protection in Canada, 1913-1914," which contains much information respecting the work of the provincial forest services and of the federal departments intrusted with the care of our forests. Forest fire protection is assuming a large place in public attention. It is obvious that, if Canada is to continue as a wood-producing country, she must conserve her resources of this natural product. The report treats exhaustively of the fire protection of forest lands along railway rights-of-way. Through co-operative action, great headway has been made in securing the reduction of forest losses through fires traceable to railway causes. The forests of British Columbia and on Dominion lands in the West have been dealt with in reports containing the results of special studies conducted by Dr. C. D. Howe and Mr. J. H. White. The Trent watershed in Ontario, has also received especial attention, in a report of an investigation by Dr. C. D. Howe in the townships of Burleigh and Methuen. This district is important in that, while of very little value as an agricultural area, it is being repeatedly overrun by forest fires and the little remaining merchantable timber destroyed. It is suggested that the area be placed under the control of the Dominion Forestry Branch for protection from fires and for reforestation.

B. C's. Flagpole Reaches Kew Gardens Safely

The 215 foot Douglas Fir flagpole recently shipped from British Columbia to Kew Gardens, London, Eng., has reached its destination safely. A London despatch referring to its arrival says:—"Once the pride of a British Columbia forest, a 215 foot flagstaff now lies in the Thames off Kew Gardens. The clerk at Kew wrote out a receipt for 215 feet of flagpole, on a two-inch piece of paper—"Received in good condition, one log." The adventures of the pole are by no means at an end. The Garden authorities are now faced with the big task of raising it across the ha-ha, the moat which bounds the river-front of the Gardens and then dragging it a quarter-mile to the mound where the old flag pole stood for so many years.

B. C. Outlook Exceptionally Bright

Editor Canada Lumberman: Vancouver, B. C.

In connection with the lumber situation at the Coast, we have this year a most unusual situation. The stock of lumber in the hands of the mills in the mountain district of B. C. and at the coast, is at least 200,000,000 feet less than a year ago and the stocks of lumber in Northern Alberta and Saskatchewan spruce mills, we understand, are short between 60.000,000 and 75,000,0000 feet. Coupled with this is the fact that stocks in the hands of the retail dealers in the Canadian North West are probably lower than at any time in the past 8 years. This is accounted for by reason of the tendency on the part of the retailer to order just such quantities as they have actually sold, or have definite enquiries for, so as to ensure the stock being promptly moved out of their yard.

A year ago this time, stocks of lumber were between 250,000,000 and 300,000,000 feet more than at present and the country had just gone through a partial crop failure and everything was very uncertain, in fact the view did not have a ray of hope in sight. To-day, the Canadian North West by reason of the bountiful crop harvested during the past year is in materially better shape and the prospects for an increased retail trade are very bright.

We are optimistic as to the Canadian North West trade. We think all signs point towards increased consumption of lumber and with a reduced visible supply to meet this situation, we look forward to the future with considerable hope.

During the past three weeks the lumber production on the Pacific Coast, including the states of Oregon and Washington as well as B. C., has been curtailed 75 per cent. to 90 per cent. by comparison with normal. This was brought about by the exceptionally severe cold snap and snow storms which have rendered operations impossible. The mills have light stocks and at present are quite heavily booked up, particularly the mills catering to the rail trade.

The supply of logs in the water is exhausted. A year ago this time there were in B. C. waters not less than 200,000,000 feet of logs. To-day, we question whether there are 10,000,000 feet available for sawing. Owing to the heavy snow-fall logging operations are greatly curtailed and at more than 75 per cent. of the camps operations are impossible. Therefore there is very small likelihood of the camps being able to supply even the normal requirements of logs for the next three months.

The cost of manufacturing lumber will be heavily increased. There is no doubt that labor conditions in B. C., particularly common labor, will be very bad. There is at present a shortage, and the industry is practically tied up on account of severe weather. Practically all lines of milling supplies have advanced from 10 per cent. to 300 per cent. Some items like high speed steel are almost impossible to obtain at any price. All of these conditions point toward increased cost of manufacture which inevitably must make higher prices for our product.

With regard to the Eastern Canada trade: this looks very much better from the coast millman's standpoint. The substantial increase in the cost of yellow pine offers the coast mills an opportunity of competing with yellow pine in Eastern Canada.

With regard to the export situation; just now the mills are not heavily booked, but most of the export mills have sufficient orders on hand to take care of their cut for the next 2 or 3 months. We know that this is the situation with our own company and several others at the coast.

It is rumored that the Panama Canal will be opened to vessels of 27 foot draft during the month of February or at least at the first of March. If this report is true and the canal is operating, the present shortage of tonnage will be. at least partially, relieved. The British and French Governments will undoubtedly send some of their tonnage to the coast for lumber. They cannot afford to lose the time necessary to go around Cape Horn. The difference in time in favor of the canal is so great that we have every reason to hope that our export business for 1916 will be greater than during 1915. While we have all complained of the shortage of export business during the past year, yet when the figures are made up we find that B. C. exported over 60,000,000 feet which is a substantial increase over the year 1914 and only 20,000,000 feet short of the best year we ever had here, which was 1909. Our prospects for business this year are certainly better than they were for 1915.

In summarising the situation I would say that every indication points toward better times ahead for the lumber manufacturers. It will require a big increase in the volume of business and in the average selling price at the mill, before the business will be on a satisfactory basis.—Canadian Western Lumber Co. Ltd., H. J. Mackin, Assistant Manager.

A colored photograph representing "Moonlight on Georgian Bay" decorates an attractive calender for 1916 sent out by the McGibbon Lumber Company, Penetanguishene, Ont. The picture is a very striking one which will appeal to all who have been fortunate enough to enjoy the delights of summer time in Northern Ontario.

Lumber Receipts at Tonawanda

Of the 1915 receipts of Lumber at the Tonawandas, a total of 45,000,000 feet came from Canada as compared with 47,500,000 feet brought down from Canada in 1914. Of the remainder of the 1915 receipts, 111,000,000 feet came from the Duluth-Superior district.

Port	Feet
Duluth-Superior	111,605,800
Two Harbors	4,981,600
Escanaba	1,810,100
Manistique	10,510,300
Manistee	1,751,000
Bayfield	3,293,400
Ashland	3,568,100
Menominee	3,961,800
Washburn	6,110,100
Cheboygan	2,330,200
Misc. United States ports	16,625,700
Cutler	4,479,360
Little Current	14,569,756
Blind River	3,641,425
Spanish Mills	18,484,810
Thessalon	2,151,401
Misc. Canadian ports	2,184,058
Total	212,058,300

The receipts by months for the years 1914 and 1915 follow:

Month	1914	1915
May	28,641,700	23,722,200
June	29,531,100	31,838,400
July	32,139,700	26,801,900
August	22,738,000	26,853,600
September	25,662,800	41,357,700
October	25,496,800	33,805,900
November	16,486,800	22,305,700
December	3,272,900	5,372,900
Total	183,969,100	212,058,300

The complete report of the Tonawanda ports for 1915 follows: Lumber, 212,058,300 feet; lath, 3,614,120 pieces; posts, 127,380; baled wood pulp, 14,951 tons.

The lumber receipts at the Tonawandas by seasons since 1870 are as follows:

1870	105,765,100	1893	430,249,000
1871	110,741,100	1894	406,538,000
1872	109,895,900	1895	421,374,500
1873	104,998,900	1896	489,675,500
1874	144,754,000	1897	601,375,450
1875	155,384,805	1898	479,066,136
1876	207,782,227	1899	541,576,959
1877	221,897,000	1900	409,728,377
1878	206,655,122	1901	451,596,240
1879	250,699,043		12345666
1880	324,370,814	1903	458,555,122
1881	415,070,000	1904	414,806,949
1882	433,241,913	1905	465,139,600
1883	398,871,400	1906	443,449,226
1884	493,628,223	1907	332,499,512
1885	498,631,400	1908	247,556,889
1886	505,425,000	1909	322,337,930
1887	501,237,850	1910	335,901,664
1888	569,522,200	1911	311,778,484
1889	676,017,200	1912	325,209,544
1890	718,650,900	1913	300,304,787
1891	505,512,000	1914	183,969,100
1892	498,005,000	1915	212,058,300

South African Requirements for Box Shooks

Mr. H. R. MacMillan, Special Trade Commissioner, has addressed to the Department inquiries received from South African firms for box shooks. The requirements of one company, engaging in the oil and fat industry, for the soap and candle boxes listed herewith amount to about 15,000,000 board feet per year. Although this firm, which is one of the largest box-using industries in South Africa, have been obtaining their supplies from Sweden, they are now desirous of securing quotations (c. i. f. Durban) from Canada. Persons making quotations should forward by the same mail, a sample of the spruce timber from which the boxes are to be made as the company wish to be assured that Canadian spruce will compare favorably with the variety formerly imported from Sweden.

Quotations are desired per 100 boxes for each box listed. The total quantity of boxes required amounts to 8,000,000 feet distributed practically equally over the total number of boxes listed. The delivery should be made at Durban in June, 1916, and quotations should be made for the delivery of the full quantity of boxes to be distributed over the six months following June, 1916, or for the whole shipment to be sent forward in one, two or three shipments following June, 1916. Specifications and information regarding prices can be secured from the Department of Trade and Commerce.

Box Shooks Required in Canning Industry

Mr. MacMillan has also forwarded an inquiry from a large canning company in Cape Town for box shooks to be shipped to arrive in South Africa in May or June, 1916:—

Box No. 14—

T. and B.—500 bdls. each, 20 pieces.....18⅜ x 17⅝ x 7-16
Sides—500 bdls. each 20 pieces.....18⅜ x 7⅞ x 9-16
Ends—1,000 bdls. each 10 pieces.....16½ x 7⅞ x 15-16

These boxes in normal times cost 1s. 3d. each, delivered at Cape Town, but in October, 1915, they cost 1s. 5d. The present prices are still higher.

Box No. 15—

T. and B.—1,500 bdls. each 20 pieces..23 11-16x15 13-16x7-16
Sides—1,500 bdls. each 20 pieces.....23 11-16x8½x9-16
Ends—3,000 bdls. each 10 pieces.....14 11-16x8½x15-16

A sample of this box is being forwarded. In normal times it cost 1s. 5d. delivered at Cape Town. In October, 1915, it cost 1s. 7d.; the price is now higher, owing to the increased freight.

These boxes should be shipped dry, and be made of white spruce, not painted, and where tops, sides, bottoms or ends are made of more than one piece, should be tongued and grooved. The tops and bottoms, sides and ends, should be bundled separately and labelled.

Quotations are desired c. i. f. Cape Town for 5,000 of No. 14, and 20,000 of box No. 15.

These boxes are used in the lobster canning industry and if acceptable will lead to the development of valuable trade.

Attention is also called to the requirements of a South African firm making inquiry for box shooks, as indicated in Trade Inquiry No. 65, appearing in the Weekly Bulletin. It is stated that 10,000 boxes are required for biscuit packing, 5,000 of which are to be as follows: 26 inches long, 15¼ inches wide, 15 inches high; the remaining 5,000 to measure 22 inches in length, 13 inches in height and 17 inches in width. Outside measurements are those given. The sides, tops and bottoms are to be ⅜ inch thick and ends ½ inch thick. Cleats are to be ⅝ inch by 2 inch and inside of box ½ inch shorter than height. The present price of this box is 2s 6d. in Durban.

The following are specifications of fruit boxes required by the same firm. The shooks are to be in bundles of 100, and about 1,000 of each size are asked for:—

	Inches
No. 1	15 x 9 x 2
" 2	18 x 12 x 2¼
" 3	18 x 12 x 2¾
" 4	14 x 12 x 3
" 5	24 x 12 x 3
" 6	18 x 12 x 5
" 7	26 x 12 x 7
" 8	26 x 12 x 12
" 9	18¾ x 9½ x 4½
" 10	21½ x 8 x 5

Sides, tops and bottoms—⅜-in. thick.
Ends—½-in. thick.

Specifications for orange boxes, about 1,000 of each size being wanted, are as follows:—

18 x 12 x 1¾
18 x 12 x 2
18 x 12 x 2½
18 x 12 x 3
18 x 12 x 3½
18 x 12 x 4
18 x 12 x 5
18 x 12 x 6
24 x 12 x 6
26 x 12½x 12½

Sides, to sand bottoms—⅜-in. thick.
Ends—½-in. thick.
Quotations on all boxes should be c. i. f. Durban.

The names and addresses of the firms making the inquiries referred to above may be obtained on application to the Department of Trade and Commerce, Ottawa. (Refer File A-526.)

Mr. P. Z. Caverhill, Deputy District Forester in the Vancouver Forest District, has accepted the position of Chief Forester for New Brunswick. Mr. Caverhill is a native of that Province, a graduate of the University of New Brunswick, and has had a wide experience and been a valued officer both in the Dominion and British Columbia Forest Services.

Forestry Association Holds Annual

Addresses delivered tell of practical work in co-operative fire patrol

The Annual Meeting of The Canadian Forestry Association was held at Ottawa on January 20th and was well attended. One of the most interesting events of the meeting was an address by S. L. deCarteret, President of The St. Maurice Forest Protective Association, who outlined the work of the association. He described how determined action on the part of a group of Quebec limit holders had succeeded in cutting down the loss from forest fires to an almost negligible degree. In the course of his address, Mr. deCarteret brought out many remarkable facts supporting the argument for co-operative effort by the lessees of limits. Indeed, the speaker proved conclusively that so far as results are concerned, no government system has yet reached the same class of efficiency. Since the association came into existence over 800 fires were extinguished; over 80 per cent. of which were put out by the rangers themselves, without outside assistance or extra expense. In the same period sixty-three thousand fire notices and signs have been posted, and twenty-two thousand leaflets and booklets distributed. No less than twelve thousand square miles of timber lands are comprised in the territory over which the St. Maurice inspectors and rangers hold sway. This area is divided into six divisions each in charge of an inspector, these divisions being further subdivided into thirty-two districts or patrols, seventeen of which are patrolled by men in canoes, seven by men on horseback, three by men on foot, one by man in lookout station, and four railway patrols by men in motor cars. During the past season eighteen special rangers were put on the drives with a construction crew. Mr. deCarteret emphasized the high importance of close supervision of the rangers and their work so that the maximum value may be obtained from the season's services of each man.

The cost of maintaining the protective services of the St. Maurice system, which, with the Lower Ottawa Forest Protective Association are the only two organized thus far in Quebec, is met by assessment based on the acreage holdings of the members.

The educational work carried on by the large body of rangers is particularly directed towards the settlers in the new districts who, through careless burning of their cleared areas, have set on fire very large bodies of timber. The educational work coupled with vigorous prosecutions, has reduced the number of settler's fires to a striking extent year after year, so that this cause threatens finally to eliminate itself.

Mr. DeCarteret strongly advocated the duplication of the St. Maurice system by the limit holders of the Upper Ottawa, and there are good prospects of this step being taken in the not distant future.

That present methods of gathering the forest-crop in Canada are extremely wasteful has long been admitted by lumbermen and forest engineers alike. How this waste can be largely eliminated was the subject of an address by Hon. W. R. Brown, President of the New Hampshire Forestry Commission and Managing Director of The Brown Corporation of La Tuque, Quebec; Mr. Brown is also Assistant Treasurer of the Berlin Mills Company of Berlin Mills, N. H., the largest corporation of its kind in the world. The points of the paper, therefore, were the result of practical experience.

Mr. Brown instanced a tract of forest where both hardwoods and softwoods were represented. A company having use only for the softwoods, might not find enough in the tract to make logging a paying venture. Their problem immediately would be to find a manufacturer who could use the rock maple for shoe lasts, a jobber to cut white ash for axe handles, a tannery to take the hemlock bark, and soda or excelsior mills to use the poplar wood.

As an instance of cutting down waste on another woods operation, the speaker said that dynamite was now used on rocks and obstructions in a river before driving commences, instead of on the logs during the process of a drive. This avoided a large breakage. Again, at the mills, narrow band saws are now being used in place of the wide circular saw, thus saving many cords of wood in a day's operations. In the up-to-date saw mill all spruce, fir and hemlock waste in sawing are converted into chips, and the remaining waste is diverted into the boilers as fuel.

Mr. Brown spoke in detail of the up-to-date, economical methods of apportioning each wood to its best and most convenient use—cedar going to shingles and fence posts, chips to the sulphite plant, etc. The use of wood fibre for thousands of purposes was only in its infancy in America; it was now employed successfully for underground conduits.

The journey of the tree from the forest to the consumer now produced such widely different articles as chloroform and cloth, water pipe and lard, and yet the possibilities inherent in the ingredients of woods had hardly been scratched.

Mr. R. H. Campbell, Dominion Director of Forestry, spoke on "Forestry and the Future," applied on broad lines to the present situation in Canada and in Europe. He showed that much of the military and industrial power and "preparedness" which has so long enabled Germany to hold out against the allies was due to her organization whereby she turned all her resources to the best account, and particularly her forests. Canada was determined to exert all strength possible to aid in the winning of the war and in developing the Empire afterwards, and one of the ways in which she could do this was by a thorough and systematic "mobilization" of her forests instead of the haphazard exploitation that had taken place in the past. He knocked on the head the old idea that a forest country could never be highly developed industrially, by showing that Belgium, with a population of 652 per square mile (as against Canada's 2 per mile) with highly intensified agriculture and industry had in recent years developed her forests until they covered 18 per cent of her land area. In different parts of Canada, as in the Trent Valley, some deforested areas were proving no good for agriculture and would degenerate into deserts if not again covered with forests. For the moment there was plenty of timber in Canada, but much of our forest growth consisted of young trees, and if these were not protected our future supply would be greatly curtailed. "Preparedness and Production" were two words of which Canadians now knew the meaning and one of the best ways for increasing both was by a systematic co-operative effort among federal, provincial and municipal authorities to protect our forests, and by the application of science to use all forest products to the best advantage. It was for this reason that the Forest Products Laboratories of Canada had been established by the Department of the Interior. Germany was claiming that she could get on without gun-cotton by using wood fibre. Whether that were so or not, acetone, one of the materials required in making cordite, was a product of the distillation of hardwood. This showed just one of the ways in which Canada could assist in the struggle by the better knowledge and fuller employment of her forest resources. Mr. Campbell's plea was that this higher development should be undertaken immediately for the strengthening of Canada and the Empire now and in the future.

Conservation Commission Meeting

Important addresses read and resolutions passed—Forest protection making progress

Many of the addresses delivered at the annual meeting of the Commission of Conservation, held on January 18th and 19th, as well as some of the discussions which followed these papers, were of considerable interest to lumbermen. The meeting was presided over by Senator Edwards of Ottawa, and another prominent lumberman, Mr. W. B. Snowball, of Chatham, N. B., also a member of the Commission, took part in the discussions.

Mr. Ellwood Wilson, forester for the Laurentide Pulp and Paper Co., spoke on "Fire Protection from the Timber Owner's Viewpoint." The laws of Quebec, he said provided certain penalties for timber owners who failed to protect their limits. These laws were now undergoing revision. Fire protection officers should have no other work, as preventing and putting out fires required special training. There were many burnt-over areas which were likely to be thrown back on the government and the problem of reforesting these would have to be dealt with. The area of Quebec, burnt over and producing no crop, meant a loss to the provincial government of $15,000,000 in 50 years. Railway fires, fortunately, were becoming a thing of the past, except on the National Transcontinental, which ought to set a good example.

It was quite possible that aeroplanes or hydro-aeroplanes would come to be used in fire patrol work, though, at the present time, the cost, $10,000 per machine, was prohibitive. However, as two men with aeroplanes could patrol an immense area, the scheme ought to be feasible. The speaker closed by pointing out that the conservation of our forests was a patriotic duty, that there were slackers in peace as well as in war, and among these must be included those who failed in their responsibility to protect the nation's resources.

Forest Protection Publicity

Mr. J. B. Harkin, Commissioner of Dominion Parks, gave an address on the means taken to protect the forests on our national parks. Of particular interest was his description of a portable gasolene fire-fighting apparatus, which has been invented for special use by the forest fire patrols. Its weight complete is 143 lbs., the engine is 6 h.p. and can deliver 20 gal. of water per minute through 1,500 ft. of hose. The cost, including the hose, is $375. Very interesting, also, was his account of the ingenious methods used to impress the public with the necessity of caution in handling fire. The secret of successful advertising, he said, was "affirmation and iteration." This principle had been adopted by the Parks Branch. They had persuaded match manufacturers to paste fire-warning notices on their match-boxes, ammunition makers to put them on boxes contain-

ing cartridges. Notices were likewise put on the inside of tents, on the blades of axes, in engine cabs and on hotel stationery and menu-cards. At the moving picture shows in the Parks, colored lantern slides showing forest fires were exhibited, with exortations to be careful. Brass plates bearing legends in the same sense were attached to buggies and fastened on the bridles of riding-horses. Thus it was impossible for any one to go into the Parks without being continually confronted by fire-warning notices.

An excellent address upon "Silvicultural Problems of Forest Reserves," was delivered by Dr. B. E. Fernow. The report of the committee on Forests was presented by Mr. Clyde Leavitt, chief forester. From these we hope to publish interesting extracts in a later issue.

Resolutions Adopted

The Committee on Forests passed the following resolutions:

1. The matter of regulating settlers' slash-burning operations should be taken up with the Governments of Ontario, Quebec and New Brunswick, along the lines discussed in the report of the Committee.

2. As in previous years, the extension of the Dominion forest reserve area should be urged upon the government. It is noted that no new forest reserves have been established since June, 1914, although the necessary classifications have been completed, showing that there are large additional areas of non-agricultural lands suitable chiefly for forest purposes.

3. The bringing of the field service of the Dominion Forestry Branch under civil service regulations is absolutely essential to even an approach toward efficient and economical fire protection on Dominion lands. If it should appear that the New Civil Service Bill is not to be considered at the present session of Parliament, a strong effort should be made to have the necessary action as to the Forestry Branch taken by Order-in-Council. It is understood that this can be done as rapidly under existing legislation as under the proposed new bill.

4. The Government of New Brunswick should be congratulated on the proposed early beginning of the forest survey and classification of Crown lands. The Commission of Conservation should cooperate in the technical aspects of this work to as great an extent as financial considerations will permit.

5. The Committee on Forests believe that the inventory of forest resources of the Dominion, so well begun in British Columbia and Saskatchewan, should be continued, without interruption, in other provinces, even should it become necessary, in order to conserve funds, to slightly delay the publication of the British Columbia and Saskatchewan reports.

6. The adoption of resolutions by the Commission has proved ineffective or only partially effective, in past years, in connection with a number of matters of great importance to the conservation of our forest resources. The Committee feel that, instead of recommending the adoption of further resolutions along these same lines, it will be preferable to devote stronger personal efforts toward accomplishing the desired results., on the basis of representations previously made.

New Brunswick Exports Greatly Increased

According to statistics prepared by the St. John Telegraph, the trans-Atlantic shipments of wood from St. John during 1915 were much greater than during 1914.

In the matter of spruce deals alone there was during 1915 an increased shipment of 54,000,000 feet, and this increase would have been larger had it not been for the great difficulties of making shipment. The following are the totals from the different local shippers with the comparative statement for the preceeding year:

	Sup. Feet. Spruce	Sup. Feet. Birch Plank
W. M. Mackay—		
1914	37,703,517	1,548,443
1915	47,728,337	990,327
J. E. Moore & Co.—		
1914	19,548,966	1,274,956
1915	32,141,787	490,041
Geo. McKean—		
1914	22,417,059	2,981,540
1915	35,682,457	1,342,663
Other shippers—		
1914	4,358,284	1,846,442
1915	23,933,602	1,510,678

Birch timber to the amount of 1,611 tons was shipped in 1915, compared with 1,411 tons in 1914.

The shipments from other New Brunswick ports were as follows:

Campbellton

Year.	No. of Vessels.	Tons.	Deals etc., Sup. Feet.
1914	20	27,828	37,370,851
1915	34	32,793	42,131,020

Dalhousie

Year.	No. of Vessels.	Tons.	Deals etc., Sup. Feet.
1914	36	38,601	12,000,000
1915	46	37,415	17,000,000

Bathurst

Year.	No. of Vessels.	Tons.	Deals etc., Sup. Feet.
1914	..	.....	.....
1915	10	7,172	10,779,943

Chatham

Year.	No. of Vessels.	Tons.	Deals etc., Sup. Feet.
1914	16	25,468	35,945,187
1915	63	38,594	46,156,057

Newcastle

Year.	No. of Vessels.	Tons.	Deals etc., Sup. Feet.
1914	19	17,667	26,126,424
1915	79	44,277	51,579,879

Richibucto

Year.	No. of Vessels.	Tons.	Deals etc., Sup. Feet.
1914	..	.....	.....
1915	6	1,459	2,029,658

Buctouche

Year.	No. of Vessels.	Tons.	Deals etc., Sup. Feet.
1914	1	204	253,354
1915	2	572	909,604

Sackville

Year.	No. of Vessels.	Tons.	Deals etc., Sup. Feet.
1914	1	296	392,198
1915	7	1,309	1,447,295

Albert

Year.	No. of Vessels.	Tons.	Deals etc., Sup. Feet.
1914	5	10,363	14,139,792
1915	7	8,901	13,377,139

Shediac

Year.	No. of Vessels.	Tons.	Deals etc., Sup. Feet.
1914	..	.....	.....
1915	3	.....	993,965

There has also been a large increase from the North Shore ports as well as from St. John as the above statement would indicate. A recapitulation of the shipments in 1915, compared with the last three years is as follows:

Year	Spruce Deals, etc., Sup. Feet.
1912	245,806,682
1913	270,963,621
1914	217,906,813
1915	325,890,743

Lumber Trade in the West Indies

The demand for lumber last year in the British West Indies was less than usual in all the islands except Trinidad. The value of the total import has been about £450,000 annually, and though the exact figures are not yet available it is probable that the falling off last year in the import will exceed £75,000. The unsettled condition of trade has affected lumber perhaps more than any other important item, building operations being generally suspended for the present. In the smaller islands the demand has not fallen off so appreciably as in the larger colonies, but has kept well up to the average. In Jamaica and Barbados the decline has been substantial, amounting to £50,000 in the former and £35,000 in the latter, most of which in Barbados was in shooks and staves. It is probable that Canadian pine and spruce suffered rather more than pitch-pine from the United States.

There has been a steady increase in prosperity in Trinidad, and this island has probably felt the effects of the war less than any other of the West Indies.

The requirements of British Guiana for white pine, spruce and pitch-pine value annually about £50,000.

Variation in Weight and Strength of Timber

By J. A. Newlin*

Timber is looked upon as an exceedingly variable material without any definite idea as to just what the term, exceedingly, implies. It is the purpose of this paper to point out the causes of variability in timber and to give a more definite idea as to the extent to which each cause influences the properties of wood.

In view of the fact that the causes of variation in weight are fewer and the resulting variations different than in the case of strength properties, the two will be considered separately and the variation in the weight of wood will be taken up first.

Variation in Weight of Wood

Any piece of wood selected promiscuously may contain anywhere from 4 per cent. moisture, as in some kiln-dried material, to two times as much moisture by weight as wood material, as in occasional pieces of white fir. In view of this fact it is necessary to divide wood into three groups as to moisture in order to effect a definite comparison. These groups represent a maximum amount of moisture as in green wood, wood with no moisture, or oven dry wood, and wood with an intermediate percentage of moisture present, or air dry wood.

The weight of green wood depends upon the weight of the wood substance itself, the moisture content, and the weight of other contained substances such as resin. The various species contain widely different amounts of moisture in the living tree; for example, white ash and black locust are always comparatively dry; black ash and the oaks have about twice as much moisture, and chestnut and buckeye have three times as much as the white ash; the white and red cedars are comparatively dry while cypress and white fir contain large amounts of moisture.

Position in the tree also affects moisture content. Most hardwood show a fairly uniform distribution of moisture throughout the tree and the variation in the hardwood species is comparatively small. The conifers, on the other hand, show a wide variation in moisture content. In the same tree, as a rule, a large difference in the percentage of moisture exists between the heart and sapwood and, in some instances, between the upper and lower parts of the tree. Longleaf pine and most other conifers have very low moisture contents in the heartwood and very high in the sapwood, causing young thrifty trees to run heavier than old overmature trees of the same species. Tamarack and cypress are exceptions, having fairly uniform moisture contents throughout the tree. Sugar pine and western larch, due to resinous material as well as water, are very heavy at the butt.

Variation of 5 per cent. above or below the average weight per cubic foot for a given species are to be expected in the case of species having a fairly uniform moisture content. This variation may, however, run as high as 20 per cent. occasionally. With species that do not have a uniform moisture content about 10 per cent. variation in the weight per cubic foot may be expected with occasional trees varying as much as 40 per cent. These figures apply when considering small amounts of the wood, such as timber from a single tree. In larger shipments, as would be expected, the average weight is much more likely to be nearer the average value for the species, although in the conifers, as was previously pointed out, the character of the stand would very materially influence the weight per cubic foot.

Air dry weight varies largely on account of the wide variation of moisture content implied by the term. Some species lose the moisture in one-tenth the time of others. Some material is airdried to reduce its shipping weight and is considered dry when it ceases to lose moisture fairly rapidly, while for some of the more exacting uses the material will be carefully dried for months or even years until it reaches as low a moisture content as possible under the conditions and moisture within the stick has become uniformly distributed. For example, in airdry telephone poles of cypress the moisture content may be over 40 per cent. of the oven-dry weight of the wood, while for high-class finish lumber of the same material it will probably be below 10 per cent. Thus it is seen that different conditions of airdrying may affect the weight of a species so that one class of material will be only about three-fourths as heavy as material of another class. However, for any given class of timber the figure is fairly uniform and the weight per cubic foot will have about the same percentage variations as in the green hardwoods.

The weight per cubic foot of absolutely dry, or ovendry material, varies somewhat less in percentage than the weight of either green or airdry timber. The timber from any given tree will one-half the time fall within 4 per cent. of the average value with occasional values as much as 16 per cent. above or below the average. These variations are about the average for most species. The longleaf pine and Douglas fir, however, show variations about one and one-half times as large as those given.

The strength, hardness, stiffness, and shock resisting ability of a given piece of timber are dependent upon the density, grade, moisture content, nature of loading, and species.

Variation in density, or over-dry weight per cubic foot, is one of the chief causes of variations in the mechanical properties of wood. In fact, the relation between density and strength is so definitely known that the density of a wood may well be taken as a criterion of its strength properties. It is found that as a rule all strength properties increase with the density.

Strength and stiffness as a beam or post increase with about the first power of the density.

Hardness and strength in compression perpendicular to the grain vary almost exactly with the square of the density. While the shock resisting properties vary by a slightly higher power.

It is hardly necessary to state that the grade of timber has a marked effect on the strength properties. Checks, knots, ring shakes, and other defects in general result in lower values in all the strength properties. Commercial timber will range all the way from sticks that will barely support their own weight as a beam to clear straight grained dry timber much stronger in proportion to its weight than structural steel. Difference in grade is responsible for a great deal of the variation in strength of the structural timbers.

Change in moisture content in the approximately green material affects the strength values above listed very little. This is because the moisture contained above the fiber saturation point, usually about 25 per cent. or 30 per cent. moisture, does not materially affect the mechanical properties of wood. Below this point, however, most of the strength values in small pieces increase rapidly with a decrease in moisture. Hence, in airdry material moisture content is a very important factor in its effect on strength values. In many instances the ultimate bending strength is more than doubled by a reduction in moisture from the fibre saturation point to 10 per cent. or 12 per cent. moisture, a condition representative of airdry material such as small timber stored inside. In impact bending it is found that an increase of about 8 per cent. in the ability of a specimen to absorb a shock and return to its original form is caused by a decrease of 1 per cent. in moisture when the moisture content is about 12 per cent. of the oven-dry weight. However, the total shock a specimen can absorb before complete breakage is found to be greater in the green or wet condition. In other words, a dry piece of timber will spring without being permanently distorted and return to its original position with a greater force than a green timber of the same material. But when failure starts, the dry timber fails much more quickly than the green. That is, the dry timber is more brash. Stiffness increases with the dryness but the change is by no means as marked as in the bending strength, a gain of only about 25 per cent. being effected by the drop from the fiber saturation point to 10 per cent. or 12 per cent. moisture.

Although the mechanical properties generally show a marked increase in strength with a decrease in moisture, in structural design allowance should be made for this increase only in rare instances, for the reason that it is a rather indefinite quality and in structural timbers the defects and checks resulting from seasoning will usually offset any gain in strength due to drying. In addition, most structural timbers are subject to moisture change and are likely at any time to become as wet as in the green state. Consequently strength values for the green material only should be used.

Two series of tests made under widely different conditions of loading are not comparable because of the variations in results on this account. The rapidity with which the load is applied and the duration of the load has a marked influence. For instance, it is found in impact bending where the load is applied almost instantaneously a stick will resist without apparent injury a force more than double the dead load which would ultimately cause failure. It has also been determined that a beam loaded over a period of several months will finally break under a load less than two-thirds that required to break it where the ultimate load is reached in a few minutes.

Tests on large pieces will ordinarily show lower strength values than those obtained from small specimens for the reason that the large pieces usually contain defects of one form or another in the region of failure whereas the small ones are clear.

The variation between species is very great when opposite extremes are taken. For example, the bending strength of black willow is about one-fourth that of black locust. But for woods ordinarily competing for the same structural purposes this difference is usually small and has been greatly overestimated, greater differences in strength properties usually existing within these species than between their averages. For instance, 25 per cent. of the timber from the true shortleaf pine (pinus echinata), an inferior timber, will average higher in strength value than the average longleaf pine (pinus palustris), one of the best structural timbers; and 25 per cent. of the latter will fall below the averages for the former. Thus it is seen that it is just as important, if not more so, to inspect the quality of wood in a given shipment as it is to determine the exact species.

In small clear specimens of the same species tested green under

* In charge of timber tests, forest products laboratory, Madison, Wis.

the same conditions, variations are likely accounted for by variations in density. Those properties which vary as the higher powers of the density we would expect to have greater variability than those which vary with the first power and that the variation above the average would be slightly greater than below. This we find to be the case. Strength and stiffness as a beam or post come under the latter head and it is found that in the conifers the probable variation from the average is about 12 per cent. That is, it is an even wager that these values for any single specimen will be either within or without 12 per cent. of the average for the species. In exceptional cases a piece may be as much as 48 per cent. above or below the average. In the oaks the probable variation is 15 per cent. and occasional pieces may go as high as 60 per cent. above or below the average.

Hardness and compression perpendicular to the grain, varying about as the square of the density, have a somewhat higher probable variation, the figures being 15 per cent. for the conifers and 17 per cent. for the oaks. Occasional specimens in either class, though, may be found to vary from the average for the species by four times these amounts.

In the case of shock resisting ability, which varies as a somewhat higher power than the square of the density, the probable variation is 18 per cent. for the conifers and 24 per cent. for the oaks with occasional pieces varying by as much as four times these amounts from the species average.

In case an average for any of these values is considered as in any given shipment it would, of course, in all probability be nearer the average for the species and the greater amount considered the closer the average would be expected to approach th true species average.

If small clear specimens of the same species and density and with the same conditions of testing are considered the variation will be found to be comparatively small. Under these conditions the probable variations given above will be reduced by about one-third, leaving a small part of the variation in timber unaccounted for.

Thus it is seen that the strength of timber of a given species with its defects, density, and moisture content known may be estimated with considerable accuracy. No attempt should be made to compare species upon data in which the conditions are not practically the same or where reliable data are not at hand for reducing values to a common basis. With timbers free from defects and of the same species and moisture content only one-fourth of them may be expected to fall more than 12 per cent. below the average in strength. Of this one-fourth, occasional timbers will have only one-half the average strength. It is the purpose of the density clause in the grading rules for structural timbers to eliminate the relatively small percentage of the timber in which the clear wood has only from one-half to two-thirds the average strength for the species.

Lower Ottawa Protection

The Lower Ottawa Forest Protective Association increased its area by 944,640 acres during 1915 and have now the patrolment of 8,504,320 acres. Within the above area there remain but one or two small limit holders who are not members of the Association.

The total area was divided into four divisions and 49 ranger districts . The patrolling was done with 58 rangers and 4 inspectors (or Chief Rangers). All rangers were equipped with canvas water buckets and fire fighting equipment was stored at convenient places in their districts. The patrolling was done partly on foot, canoe, or with horses, the nature of the district trails and roads being taken into consideration. 10,000 fire posters were used in placarding roads, trails, camping grounds, watering places, etc., and a large quantity of warning pamphlets were distributed among settlers located in vicinities bordering the limits.

During wet periods rangers were kept busy trail cutting, building fire places, lookout towers and ranger camps and construction of telephone lines. Two hundred and twenty miles of trail were cut and cleared during the season.

155 fires were extinguished during the season and of that number 113 were extinguished without extra labor, or in other words, put out before spreading. The fires originated as follows:—

Settlers 79, fishermen 15, berry pickers 8, squatters 8, lightning 6, drivers 4, hunters 4, woodsmen 2, indians 2, railways 2, surveyors 1, unknown 24.

The above figures show that 51 per cent. of all fires originated from settlers. This is a considerable decrease over the percentage of fires from that sources last year. The association's rangers supervised the burning of 322 slashes and permits given.

With the co-operation of the Provincial Government the association continued to prosecute settlers in the same manner as in the season of 1914 and convictions were secured in 40 cases and very few of the number were found in the vicinities where prosecutions took place last year.

Central British Columbia Forests

Timber resources which will bring in great revenue and profit when markets have been developed

The forests of Central and Northern British Columbia, especially in parts of the interior, are so far practically untapped, except for local uses, and their great extent and value are not widely known. This is largely due to the fact that up to the present, transportation facilities have been lacking and the timber has been, therefore, commercially inacessible. For this reason the lumber industry of British Columbia so far has been practically confined to the forests of the Southern coast and Southern interior. Conditions have been changed, however, Some of the best timber areas have been opened up by the completion of the Grand Trunk Pacific. Further large areas will be made accessible on the completion of the Pacific Great Eastern and the Canadian Northern. Undoubtedly in that part of the province a flourishing lumber industry will develop sooner or later—how rapidly depending, of course, on the markets.

Central British Columbia lies approximately between latitudes 51 degrees and 57 degrees, and takes in the whole width of the province. (Latitude 51 degrees is at the north end of Vancouver Island, and passes through Revelstoke or near it. Latitude 57 degrees is north of Fort Graham, on the Finlay River. In includes the forest districts of Kamloops, Lillooet, Prince Rupert, Hazelton, Fort George and Tete Jaune. In other words, it includes all of British Columbia at present under forest administration except the southern tier of forest districts.)

The total area of Central British Columbia is over 106 million acres, or nearly half the province. North of Central British Columbia there is an additional area of 70,000,000 acres. It lies between latitudes 57 degrees and 60 degrees—the northern boundary of the province—and may be called the real Northern British Columbia. It is nearly as large as Norway. Little is yet known of the timber resources of that part of British Columbia except that practically all of the country below timberline is wooded, and that there is in the aggregate a very large amount of timber there, especially pulp timber.

It is conservatively estimated that 80 million acres of the total 106 million acres is forested. Allowing 10 million acres—a liberal estimate—for potential agricultural land, there remains 70,000,000 acres of absolute forest land valuable only for growing timber, and in part for summer grazing. Probably at least 40,000,000 acres of this is capable of growing merchantable timber. The present stand is estimated to be at least 80 billion feet b. m., and is probably nearer 100 billion—or about one quarter the total stand of timber in the province.

The annual growth may be estimated at 100 board feet per year, or four billion feet b. m. per year on the 40,000,000 acres. This is not far short of the total cut of Canada at present. Reckoned as pulpwood, the total quantity is at least 200 million cords, and the annual growth 8 million cords. This latter figure is approximately twice the present yearly consumption of pulpwood in the United States.

Complete utilization of the present stand would yield the province forty million dollars in royalty alone. It would distribute in the neighborhood of a billion dollars in logging costs, represented by wages, supplies, etc.; and 75 to 90 per cent. of that would go directly to the community.

Complete utilization of the annual growth would each year yield two million dollars in royalty alone, and distribute around fifty million dollars in logging costs in the province.

Before there can be any permanent and important increased development of the lumber industry as a whole, however, new markets and bigger markets are needed. There is mill capacity in Southern British Columbia now to nearly double the present lumber production if the surplus could be sold, and unless markets are enlarged and a bigger demand created, any increase in lumber production by one section of the province—Central British Columbia, for example—would be made at the expense of other sections.

The development of bigger lumber markets is one of the most important tasks facing the timberholders, the lumbermen and the government of British Columbia today. It is a task which will require and deserves their best efforts, because on its successful accomplishment the commercial future of the province is dependent to a greater degree than is generally understood.

William Anderson, a pioneer lumberman of Ottawa died on February 1st, after a short illness. The late Mr. Anderson was in his sixty-seventh year. He was born in Almonte in 1847, and went to Ottawa when sixteen years of age. He was for forty years connected with J. R. Booth Lumber Company, during which time he was known as Mr. J. R. Booth's right hand man. He is survived by his widow, four sons and four daughters.

Set a Goal and Then Go To It

If any lumberman thinks he hasn't any "kid blood" left in him let him try this on himself and, if he puts up a sale limit and "goes to it" and wins out and if he doesn't send me the price of a hat for suggesting it to him, and causing him to make at least a thousand dollars more than he would have had he not tried it, I'll buy him a suit of clothes.

You will make a thousand, too, if you do just what I am going to tell you I intend doing and shall do it, too, if I live, but the trouble with lots of you fellows is you say, "Oh that Dutchman is crazy," and pass it up, and the Dutchman goes ahead and has the extra thousand at the end of the year and you look up some other good advice to read and not try. Listen—You laughed at me when I told you to act square with the bankers and charge interest on your old accounts—but I went ahead and charged it and I have credited up my discount and interest account with $12,000 since then and you have kept calamity howling about, "People not paying their debts." You tried to beat the banker, but you beat yourself, and the fellows that you helped to beat the banks out of the interest are buying from your competitors and knocking you to beat the band.

I am glad to see a whole lot of fellows are trying out these ideas and they write me once in awhile and thank me, while others take the idea and claim it as original, or tell people they started it. Well, I don't care, what I want to do is to remedy your conditions, and I don't hand out anything that I don't try out first myself either, and if I didn't dig up something good once in a while I guess the boss would fire me—but maybe he just forgot to, and this will remind him of it.

The "Doctor's" Big Sales Campaign

Now, I am going to tell you of the big sales campaign that I am putting on. There is going to be the hardest fought lumber battle in my district in 1916. Somebody is going to get out of the business or somebody is going to be pretty near punctured.

Well, to stimulate things I made only one resolution, which was, "Resolved, that I will stick to my friends in 1916," and I am going to do it. And as I interpret the Golden Rule they now have to stick to me—don't they?

I put in my window today a center-piece which reads as follows:

> We have set our
> 1916 sales at $90,000,
> and we need everyone
> of our friends to help
> us reach the goal.

I then signed it, as did my entire office force. People who know me know that I am going to do just what I say.

Now some of you "clams" who think you can in an underhand way put one over somebody, will say I am a fool for letting people know what amount I sell and tell them all my business, but while I may be a fool—it takes a fool for luck, don't you see.

How Much of Each and the Answer

Some said, "Why didn't you make it an even $100,000?" I told them I didn't think I could sell but $90,000 and would be satisfied with selling that much, but no less. I divided out the $90,000 sales as follows:

Lumber	$30,000
Cement	15,000
Millwork	10,000
Plaster	5,000
Builders' hardware	4,000
Fence wire	2,000
Lime	2,000
Varnish	1,000
Paint	6,000
Glass	1,000
Roofing	5,000
Lightning rods	1,000
Weather strips	1,000
Screens	1,000
Sacket board	2,000
Wall board	1,000
Lawn furniture	500
Ladders	500
Sewer pipe	2,000

Now, then, I can't tell you all I am going to do right now in this campaign for some of my competitors would be able to combat them too easily, and while I am going to keep the public posted as the campaign progresses, I just have to keep a few things under my hat to my best friends, but, if I win, all this will be forgiven.

This campaign is being entered into with the firm belief that it will be successful. It is one of jollification and cheerfulness; not of doubt or fear—it can't fail because we say it must succeed. We must "nail the pennant to the pole"—"we must bring home the bacon." My sales force are reading up and are going to take just as much interest in it as myself—even my eleven-year-old boy has pricked up his ears. "Old Friday," the faithful old truck goes chug-chug just a little clearer, and the old mare mule, though blind with age, tries to step up a little spryer and the bald face horse kicks up his heels a little higher when we take the harness off him in the evening.

People stop and read the announcement and wave their hand at me through the window—it's on—the campaign is on—we are off at daybreak today.

I have some pieces of finish lumber, moulding and dimension in the window with a card on saying, "We are going to sell $30,000 worth of this." A sack of cement saying, "We will sell $15,000 worth of this." The sack of plaster, the iron and prepared roofing, the weatherstrips, the panes of glass, the lightening rods, the lump of lime, the locks and nails. The cans of paint and varnish, sacket boards, wall boards, lawn chairs, ladders, etc., have each their card and telling how much of them is to be sold—and each is yelling to everyone to be sure to remember them during the year, so how can anyone help but remember them

All Will Co-operate.

Lots of work must be done and there must be co-operation by more than your clerks. You have to have the assistance of all firms that you buy from and all the people who buy from you. The first campaign must be worked out with your manufacturers and jobbers first, and that takes a little work too. I have written to all of the firms that I buy side-lines from. The lumber firms have not reached the point that they will help the retailer, but the lumber manufacturers' associations are going to put their shoulder to the wheel though and you bet we are glad to see them wake up. Before the year is over I will be able to tell you of the many helps that they are handing out to those who appreciate enough to help themselves by working with them, but the guys who are afraid their business will grow so that they will have to pay more tax or have to take out more fire insurance will still continue to live a quiet life.

I have received many letters from the firms that I buy from and about two wagonloads of advertising and you bet we are kept busy taking care of it.

It is certainly a good way to find out who will stick to you and who won't. I have received lots of letters of encouragement and some of discouragement. When they write me a discouraging letter I change the doctors on them. I hunt up some one in that line that will help push a good thing along. There are some firms who have been so nice to us that they just couldn't drive us away from them till we feel that they have made enough out of us to pay them for what they have done for us. They send samples, circulars and offer to do anything else that they can for us. Some offer to carry on a local advertising campaign for us.

The Fellows in Sunshine Row

The art of writing a letter is brought out very forcibly in this campaign as it is quite a diversion to read them. One firm will offer their help with a whole lot of strings tied to it and want you to guarantee them about $5 for every one they give you. Another will give so reluctantly that you are ashamed to take it because they put you in the light of a beggar. Another will make you feel that you "aren't right bright," and some fellow will refuse you outright.

Then you strike "sunshine row." These fellows either turn you down in such a nice way that you like them for it, or give what they can, and give it cheerfully, and the next one gives you a whole lot of good encouragement and anything else he has while the next one will fall oll over himself in trying to do something for you so you are well repaid for your trouble.

I received today a lot of samples to send out and when I signed up the express receipt I saw that there had been $4.25 prepaid on that one lot.

Well, I am going to get that money back to that fellow. I had one paint concern refuse to get me out the number of color cards that I asked them for, and I have been selling their brand of paint for thirteen years—no, I didn't quit them, but it surely made me feel bad. I just told them I had to have them for this campaign and to send them and charge them up to me; for it was cheaper for us to do this than to change brands of paint and spend about $500 in doing so—besides I knew that this firm was right at heart and only got a little close temporarily, but I could not forget their past favors and could not pass them up so suddenly. Now then, why don't some of you fellows who try out things of this kind let us know about them. You had better wake up or the catalog houses will spill you all over the earth and then it will be too late.

Don't be afraid your competitor will try them out on you—be an originator—never an imitator, but it is even better to be an imitator than do nothing.

I had to buy the first straight carload of wall-board today that

ever was sold in this town because I had to meet the catalog house price and now I want them to come to it, for I am fixed to make the price to get the business.

Set your goal and get your sales force enthused and sell 10 per cent. more than you would otherwise, and it will be all clean profit for the labor, rent and several other expense items will be no more and your profit will be the whole amount between the cost and selling price.

The Kiddies Will Help

My eleven-year-old boy put his picture in the paper this afternoon and announced that he and the whole bunch at the yard were going to help "Dad" sell the $90,000 worth of building material, and there are at least 2,000 other children—those whom I have been treating to candy for the last six years—who are going to support me in this campaign.

Don't some of you wish you could have a reserve of 2,000 volunteers to call on at any time besides your regulars? It's great; the love of the 2,000 and more little souls beats all the gold in Alaska. Gold can be stolen or lost, but the love of the kids is everlasting, and I am going to guard it sacredly.

That's why I say when I am want to do a thing, I am going to succeed for, when I play "Come Kiddies, Come," on my old barytone, there is no "hesitation" then.

I'll tell you later on how I succeed or why I failed, but don't wait for my report—think—act—and even if you fail it's no disgrace.—The Lumber Doctor in the St. Louis Lumberman.

Rules for Preventing Mill Fires

The following ten rules for the prevention of fires have been drawn up by The National Lumber Manufacturers Inter-Insurance Exchange:—

1. All casks and fire pails must be kept full at all times. Under no circumstances are fire pails permitted to be used for any other purpose.

2. Fire hose attached to standpipe must not be removed from its position, and must not be used for ordinary purposes.

3. All fire doors and shutters must be closed and fastened at night.

4. Greasy or oily rags and cotton waste must be deposited in "Oily Waste Cans" specially provided for that purpose, these cans to be taken to the boiler house and contents burned after each day's work.

5. Steam pipes must be kept clear of all combustible matter and must never be allowed to remain in contact with wood.

6. Line shafting must be kept clean. Dust and dirt must not be allowed to accumulate on bearings. When oiling the journals, all dirt and dust on shaftings and bearings should invariably be brushed off. A whisk broom may be used for this purpose.

7. Drip cups under bearings must be emptied regularly. Oil must not be allowed to drip on floor beneath bearings or the surrounding woodwork.

8. During operation and repairs all shavings and debris of all kinds to be removed from the building each night, and after repairs are completed all unused material to be removed from the building.

9. No smoking will be allowed on these premises.

10. All employees are cautioned to keep the premises clean.

Foremen and Superintendents are expected to see that these rules are faithfully observed. Employees neglecting any of these regulations or violating any of these rules are liable to instant dismissal.

Newfoundland's Trade in Pit Props During 1915

The Council of the Board of Trade of St. John's, Newfoundland, in its seventh annual report refers as follows to the trade in pit props:—

The Government permitted the export of Pit Props in 1915, and the cutting of this wood provided very necessary earning power last winter. Attention having been drawn to a report that has been laid on the table of the House of Commons, containing statements regarding Pit props from Newfoundland which were not in accordance with the facts, the Council forward to the Board of Trade, London, a representation setting forth the actual facts. The export of Pit props from the year ending Dec. 31st, 1915, is 69,454 cords, valued at $373,682. Our entrance into the timber trade of the United Kingdom has resulted in the expenditure of some $300,000 among our wage earners during the past year, and it is likely that as much as $500,000 will be similarly expended during 1916. The prices paid by buyers, however, have been too low to give our contracts any fair margin of profit, commensurate with the financial outaly and work involved, and the business has consequently failed to attract organized capital to any great extent. This position is in noticeable and regrettable contrast to features of the timber trade in Canada and in the United Kingdom. In Eastern Canada a flourishing condition exists among timber dealers, under the influence of war prices paid for lumber and kindred products, while in the United Kingdom timber generally, and Pit props particularly, have risen to prices previously unknown. The advantage appears to have gone altogether to the British shipping or importing interests, and the Newfoundland contractor is merely "marking time" in the Pit prop industry until better prices are paid.

Red Pine Deals Required in South Africa

A Durban firm, who are the largest lumber importers in South Africa, are desirous of making a small trial purchase of Canadian red pine deals, so states Mr. H. R. MacMillan, Special Trade Commissioner, in a communication to the Department of Trade & Commerce, Ottawa. The object of this purchase is to determine if these deals will be as satisfactory in the Durban market as Swedish deals. The shipment received about ten years ago was unsatisfactory and, since that time, this company has purchased no red Canadian deals. Red Canadian deals are, however, now readily accepted at Cape Town and should be quite as saleable in the Durban market.

This company wish to secure from a very reputable Canadian exporter, 10 standards of red deals, 3-inch by 9-inch, in the usual Canadian assortment of length, and equal in grade to Swedish No. 3. They also wish to secure 10 standards of red deals, 3-inch by 9-inch, assorted lengths, 20 feet and up. For this small shipment they are willing to pay £20 per standard c. i. f. Durban, and will accept up to the end of March loading.

The shipper may draw at sight upon the company for payment in full.

This trial order, though small, is of great importance in opening up the Durban and Johannesburg market, and the firm exporting should write to this company giving information as to the possibility of developing an export in red deals.

Canadians interested may obtain the name of the firm in question on application to the Department of Trade and Commerce, Ottawa. (Refer File No. A-1499.)

Prices of Broom Handles in Great Britain

With further reference to articles appearing in the Weekly Bulletin Nos. 609 and 619 of the Department of Trade and Commerce, on the market for broom handles in Great Britain, Mr. Harrison Watson, Trade Commissioner, London, writes the Department that the situation has recently been eased by the receipt of supplies from the United States and that prices have dropped considerably from the extreme figures current last spring.

The following are the prices quoted for broom handles at present, the figures as given being confirmed from two different sources:

50 in. x 1 in. 1st quality	13s. 0d. to 14s. 0d. per gross.
50 in. x 1 in. 2nd quality	10s. 6d. to 11s. 6d. "
50 in. x 1⅛ in. 1st quality	17s. 0d. to 18s. 0d. "
50 in. x 1⅛ in. 2nd quality	14s. 0d. to 16s. 0d. "
50 in. x 1¼ in. 1st quality	23s. 6d. "
48 in. x 1 in. 1st quality	11s. 0d. "
60 in. x 1¼ in. 1st quality	28s. 0d. "

These prices are all per gross c. i. f. London, Liverpool, Bristol, or other United Kingdom port.

Large quantities of broom handles are exported to Great Britain from Finland, Sweden and the United States. Although Swedish whitewood and redwood squares 1⅛-inch by 1⅛-inch by 51-inch, free from knots, are being imported at £14 7s. 6d. per standard c. i. f., since the outbreak of the war, Douglas fir has also been used and found satisfactory. The greater part of the broom handle supply, however, is imported ready manufactured. The varieties imported are spruce, basswood, maple or beech. Spruce and basswood are preferred because of their light weight. Broom handles must be smooth. The only complaint against Canadian broom handles imported up to the present time has been that they were not finished sufficiently smooth, and that consequently they had to be graded as 2 and 3.

Restigouche and Miramichi Cuts Reduced

The lumber cut on the Restigouche and Miramichi rivers, New Brunswick, will be about seventy-five per cent. of what they cut last year, according to recent reports. Small operators in the southern part of the province will cut about twenty-five per cent. of what they cut last year, but those on the upper St. John waters will take out about fifty to sixty per cent. of last year's cut.

The Waterous Engine Works Company Ltd., Brantford, Ont., have sent out a fine large office calendar to their numerous friends and customers. The calendar pad is a large one with bold figures which stand out well from a distance. The calendar bears a large illustration of the company's plant and a number of small illustrations of their important products.

Spruce Imports into United Kingdom

The following table prepared by Smith & Tyrer, Ltd.. Liverpool, Eng., shows the total estimated import of spruce into the United Kingdom during 1913, 1914 and 1915, and during the months of December in these years:—

From—	Dec. 1915 Stds.	Year 1915 Stds.	Dec. 1914 Stds.	Year 1914 Stds.	Dec. 1913 Stds.	Year 1913 Stds.
Nova Scotia	2,900	88,070	2,860	70,290	940	59,360
Province of Quebec	3.580	60,330	1,770	29,860	1,890	46,670

B. C. Exports to the U. S. Show Large Increase

Exports of lumber products from British Columbia to the United States for 1915 were valued at $7,711,210 as compared with $5,642,951 in 1914. The increases were in lumber, paper and shingles. The detailed figures were:

Lumber	$ 791,772	$1,711,498
Logs	480,927	895,344
Paper	1,619,095	1,015,030
Poles and piling	125,035	79,040
Pulp	235,971	203,620
Shingles	2,374,151	3,790,763
Shingle bolts	6,634	15,915
Miscellaneous	9,368	.....
Totals	$5,642,951	$7,711,210

Taking the aggregate exports from British Columbia to the United States, there was a big increase last year, the comparative figures being: 1914, $17,582,663; 1915, $31,655,810.

B. C's. Monthly Scaling Report

The timber statement for the month of December issued by the Minister of Lands for British Columbia shows that the total scale of sawlogs for the province amounted to 52,520,857 feet board measure, in addition to 361,698 lineal feet of piles and poles, and 19,854 cords of railway ties and shingle bolts. The sawlogs scaled in the various districts include: Vancouver, 37,279,596 feet; Cranbrook, 4,975,614 feet; Island, 3,821,219 feet; Nelson, 2,537,606 feet; Vernon, 1,699,641 feet; Kamloops, 988,467 feet, and Prince Rupert, 761,586 feet. In the Vancouver district there were scaled 148,694 lineal feet of poles and piles; in the Prince Rupert division, 117,110 lineal feet, and in the Nelson district 40,725 lineal feet. Of ties, shingle bolts, etc., scaled, the Vancouver district shows 11,472 cords; Cranbrook, 4,242 cords; Nelson, 2,108 cords, and Fort George, 1,814 cords. Timber sales recorded during the month under review cover an estimated total of 7,263,000 feet sawlogs, 22,920 lineal feet poles and piles, and 200 cords ties, etc., estimated to produce a revenue of $12,213.

A Bulletin on Silo and Barn Construction

The latest bulletin issued by the Forest Service of the Department of Lands of British Columbia deals with "silos and root cellars." This is published as bulletin number 9, and contains plans and descriptions for wooden silos and root cellars. Like the previous bulletins published by the Forest Service of B. C., this one is extremely practical and simple, giving definite instructions and illustrations which enable one to understand easily the chief points in connection with the construction of such buildings. Copies of this bulletin may be secured from the Forest Service of B. C., from the B. C. Lumber Commissioner, Excelsior Life Building, Toronto, or from the B. C. Lumber Commissioner, Regina, Sask.

Mr. Urgel Pauze, president of U. Pauze Sons and Company, Montreal, lumbermen and contractors, died at the Hotel Dieu, Montreal. on February 4, aged 77. He was a native of l'Epiphanie, P. Q., and had been in business for many years in Montreal. although of late he had taken a very small part in the affairs of the firm. The company are manufacturers of mill work, carpentry and joinery work, and have planing mills and a lumber yard in Montreal.

Mr. Frederick W. Harrison, ex-Mayor of Owen Sound, Ont., president of John Harrison and Sons Company, Limited, died on February 9th, after an illness of several months.

The annual meeting of the National Wholesale Lumber Dealers' Association will be held at Philadelphia in the Bellevue-Stratford Hotel on Wednesday and Thursday, March 15th and 16th.

Prospects Very Bright for 1916

Editor Canada Lumberman: Winnipeg, January 18th.

The volume of lumber business in 1915 came fully up to expectations—probably no one engaged in the trade permitted themselves to expect too much. It was generally accepted by manufacturers and wholesalers that there would be no building for the year in Winnipeg or any of the interior cities west, or in the Coast cities—and that therefore the amount of lumber used at these points would be a negligible quantity, and this proved to be the case. The demand from the smaller prairie points for farm building construction continued steadily until the abundant crop began to be harvested and the consequent demand for granary construction material in a hurry, taxed the resources of all the mills—Mountain, Coast, and Northern Spruce, resulting in broken stocks being left at all points, all sources being short on shiplap, six-inch bar strips, and certain sizes of dimension. The strong advance in price in the yellow pine belt occasioned by the large war orders given on account of the shorter ocean haul have forced eastern buyers accustomed to having their requirements filled from the south, to place their orders on the Pacific Coast on both sides of the international boundary line, and this, coupled with the shortage of stock, and the large number of mills closed down indefinitely, has caused a sharp advance in prices by the manufacturers of all classes of lumber. This advance, we think, will be maintained for some time at least. The city building will not be of great volume for 1916, but the country trade for farm construction shows every prospect of creating a steady demand, and on the whole, in our opinion, the prospects for 1916 are very bright.—H. S. Galbraith Company, Limited.

Looking for Substantial Improvement

Editor Canada Lumberman: Winnipeg, January 14th.

We look for a very substantial improvement in the volume of farm business during the first few months of the spring as compared with the same months of previous years. The fact that the farmers, through the sale of their crops, have been able to liquidate their liabilities to such a great extent, and many of them have money available for building operations, is bound to produce a larger volume of business than in ordinary years. The total volume of business in the west will, however, not come up to former years, for the reason that the cities will not be building and there will be no new towns to speak of opened up through railway extension.

The building of cities and of new towns has, in past years, been a tremendout factor in contributing to the total volume of the lumber business transacted. —Beaver Lumber Company, Limited.

Machinery and Equipment

What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing

Economy in the Handling of Stocks

Modern methods of handling lumber and shingles were demonstrated recently at the plant of the Windsor Lumber Company, of Windsor, Ont., where cars are being unloaded and the lumber conveyed to the separate piles, two men performing the service of four. The equipment used was that of the Mathews Patent Lumber Carriers who have perfected a type of steel ball-bearing roller that will convey by gravity upon a grade of four per cent., boards, flooring or siding in bundles, and timbers of any size in a straight line or about curves as required. They have been adopted by the leading lumber manufacturers throughout the Dominion and the users are enthusiastic with respect to the saving to the lumber dealer. The above cut represents shingles being conveyed upon the steel ball bearing rollers in British Columbia mills.

Modern Method of Conveying Shingles

The Canadian Mathews Gravity Carrier Company, 484 Richmond Street West, Toronto, Ont., are the manufacturers.

The "Kendall" Gang Circular

For a number of years the Wm. Hamilton Company, Limited, of Peterborough, Ont., have been manufacturing a machine known as the "Kendall" Gang Circular, a cut of which can be seen elsewhere in this issue, designed and patented by Mr. I. N. Kendall, the well-known consulting millwright, of Ottawa, Ont. This machine has been designed for the express purpose of manufacturing into more and better lumber small logs which it is not found profitable to put through the circular or band saws. It has indeed filled a long-felt want in this regard and from the number of well satisfied users of it in Canada today it is bound to command the attention of every wide-awake lumberman who is looking for a better and quicker way to turn his small logs into merchantable lumber.

The company have furnished us with the following description of these machines: they are made in three sizes to cut 8-in., 10-in., and 12-in. cants, and take saws 26, 32, and 36 ins. in diameter, of No. 10 and No. 9 gauge, and feed rolls from 30 in. to 48 in. in length. The kerf of these saws vary from 3/16 in. in pine to 7/32 in. in spruce, but the lumber comes out so smooth and so true to size that from 1/16 in. to 1/12 in. is enough to allow for finish, so that in the long run more lumber can be actually made out of a log on this machine than on a band saw where ⅛ in. over size is the customary allowance. The main requisite of these machines to ensure best results is ample power to run them. The power required varies from 85 to 125 h.p. The floor space occupied varies from 7 ft. by 9 ft. for the smallest machine, to 9 ft. by 10 ft. 6 in. for the largest, and the weights complete run from 10,000 lbs. to 18,000 lbs. each.

The saw mandrel is a hollow one through which is forced a stream of water and by means of holes drilled into the mandrel this water is sprayed onto the saws, keeping them comparatively cool. Each saw has a separate guide, which is easily accessible and readily adjustable, and the end bridge-tree is so constructed that it can be quickly removed or swung back out of place for removal of the saws. In fact, the whole battery of saws can be changed, the guides adjusted, and the bridge-tree put back into place in 10 to 12 minutes. This is the actual time in which it has been done. The press rolls are operated by frictions on the large machines, and by weights on the small machine, and both these and the feed rolls have a drive separate from the mandrel, so that, in case of any trouble the saws can be stopped and the cant backed out of the cut by means of this separate drive. Safety fingers hung just inside the first press roll absolutely prevent a cant from flying back off the saws, so that the machine is perfectly safe to the operator.

In regard to the capacity of these machines, as high as 2,500 10-in. cants have been put through the large machine in ten hours, while 1,800 cants is the average run. The machines are very heavy, strong and rigid, and the capacity can only be determined by the skill of the operator and the number of cants that can be slabbed ready for it. The lumber cut on these gangs comes out absolutely true to size from end to end, as it is impossible to put a cant through the battery of saws and have uneven lumber. One of their customers has cut as high as seven million feet in one season on this machine, and did not have a single bad board.

Among the users of these machines are the following well-known lumber companies:—

John Lumsden, Ottawa, Ont.
Rixon,Ainslie, Stoddart Company, Owen Sound, Ont.
Charlemagne & Lac Ouareau Lumber Company, Montreal, P.Q.
Gilmour & Hughson, Hull, P.Q.
Wm. Copping, Joliette, P.Q.
Shives Lumber Company, Campbellton, N.B.
Colonial Lumber Company, Pembroke, Ont.
Devon Lumber Company, Pine, Ont.
Saunders, Howell & Company, Norris Arm, Nfld.

Besides the machines described above, the Wm. Hamilton Company, Limited, manufacture a complete line of sawmill machinery for stationary band mills, including their well-known steam tension band mill, a large number of which are in use throughout Canada. They are the pioneers in the manufacture of sawmill machinery, being one of the oldest, if not the oldest manufacturers in this line in Canada today, and the experience gained throughout these years has been built into their machinery, as is evidenced by their large number of satisfied customers.

In addition to sawmill machinery, they manufacture a complete line of hydraulic power plant equipment, including the well-known "Samson" turbine waterwheels, steel penstocks, racks, feeder pipes, headgate hoists, stop log winches, and power house cranes.

In pulp mill machinery, they manufacture a line of centrifugal and triplex stuff pumps, also centrifugal screens and pulp grinders.

Opportunities for the Retailer

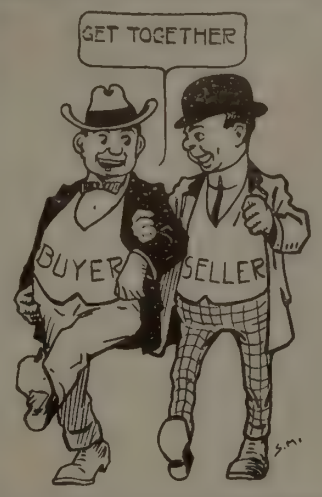
The live retail lumberman is now-a-days not confining himself to the old line of lumber and shingles only, but is adding many auxiliary lines and gathering in trade that formerly was legitimately his, but went past his door to the hardwareman.

In another column of this issue the Metallic Roofing Co. of Canada, Limited, is offering the trade a line of trimmings which can be sold with the shingles and thus an extra profit secured. Other trades formerly sold most of these profitable trimmings but the man who sells the shingles has the drop on them all, as he gets the first chance. The well known line of Trimmings sold by this firm, "Ridge Cap" and "Valley" are in great favor with the building trades and sell themselves. The Metallic Roofing Co. have prepared a lumbermen's booklet and are making a special offer to retail lumbermen as an inducement to handle the profitable line, and it would pay our readers to get in touch with them.

Clark Brothers Company, of Olean, N. Y., manufacturers of sawmill machinery, announce that they have recently sold to the Brown Corporation, of La Tuque, Que., one of their big eight-foot, new model, double cutting band mills. This mill is to replace the circular saw that has been in operation at La Tuque for some years. They are also furnishing the F. & M. Company, of Escourt, P. Q., a seven-foot, new model double cutting band mill. This is for the new Fraser plant that will be started in the spring.

The Canadian Northern Railway are purchasing one million ties between Warroad, Minn., and Port Arthur, Ont., the bulk of the contracts being east of Fort Frances. The Fort Frances Pulp and Paper Co. are also taking out several thousand cords of pulpwood.

WANTED & FOR SALE DEPARTMENT



One Hundred Enquiries

may be made through the channels in which you ordinarily do business without finding a buyer or seller. The mistake may be made of overlooking the real market place.

The Buyer and Seller of Timber Lands, Lumber, Sawmill and Woodworking Machinery, etc., are brought together through the advertisements on this page. It is the quickest, surest, cheapest and most effective means of getting in touch with the right party.

Are you using this page for your wants? It will pay you to do so. Every day brings letters telling of big results from the Wanted and For Sale Department of the "Canada Lumberman."

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Wanted–Lumber

Wanted good sound Basswood logs, 12 in. and over in diameter. Quote best price F.O.B. cars. Apply Hay & Company, Limited, Woodstock, Ont. 3-6

WANTED—Four cars 1-in. No. 2 Common and Better Hard Maple. State when cut, lengths, widths, and price, with Toronto Freight rate. Box 286, Canada Lumberman, Toronto, Ont. 2-5

WANTED—A quantity of Hard Maple and Birch, both for immediate and future delivery. 1 inch and thicker. State quantity you have to offer, price and full particulars. Box 285, Canada Lumberman, Toronto, Ont. 2-5

WANTED—During summer will need—
Soft Maple
Hard Maple
Birch
Beech
Elm
Ash
Basswood

Can use all grades or whatever you cut at your mill. What have you to offer?
Box 284, Canada Lumberman, Toronto, Ont. 2-5

100 pcs. 4 x 4 -16
40,000 pcs. 1 x 6 D 1 S and 2 edge
1,000 pcs. 1 x 10-16 D 1 S and 2 edge.
1,000 pcs. 1 x 12-16 D 1 S and 2 edge

The above bill to be F.O.B. Chatham. Address Box 377, Chatham, Ont., B. Blonde. 4-4

Hardwood Ashes

Will pay cash, f.o.b. cars, for good dry hardwood ashes. Write stating quantity you have and location. Box 312, Canada Lumberman, Toronto, Ont. 4-4

Grey Elm

Wanted 100,000 ft. of 1½ in. grey elm, No. 1 common and better, this lumber not to be edged, and can be loaded direct from the saw, but must be in 6 or 12 ft. lengths. Write for prices f.o.b. cars shipping point. Box 295, Canada Lumberman, Toronto, Ont. 3-6

Maple Squares

Wanted to buy 700,000 Maple squares, 1 in., 1¼ in., 1½ in., 1¾ in. and 2¼ in. Lengths 12 in. and up. A. K. Hansen & Co., St. Peter Street, Quebec City. 3-6

Wanted to Buy

450,000 ft. 2 in., 2½ in., 3 in. and 4 in. log run Birch. Terms 75 per cent. cash on shipment, balance on arrival. Apply P. O. Box 643, Montreal, Que. 3-6

Wanted

All kinds and thicknesses of hardwood and softwood lumber. Give full description of same, together with price. Box 328, Canada Lumberman, Toronto, Ont. 4-t.f.

Basswood Wanted

Wanted 200,000 feet of 1-inch White winter cut Basswood to grade No. 1 Common and Better, to be plump 1-in. thick when dry. State price F. O. B. cars shipping point. Address, Box 308, Canada Lumberman, Toronto, Ont. 4-t.f.

Logs Wanted

Several cars Rock Elm logs. Quote price to St. Marys Wood Specialty Company, Limited, St. Marys, Ont. 4-4

Stock Wanted

1½ in. to 4 in. Soft Elm, Basswood and Black Ash. Box 320, Canada Lumberman, Toronto, Ont. 4-4

Wanted

Two cars No. 2 Hemlock, sized in widths in 2 x 8 and 10 - 10 ft. to 16 ft. Part 1 car 1-in. dressed.

Two cars Cedar Posts, dry, peeled, sound, 3½ to 4½ top; 8 ft.; for cash. Apply Box 195 Jordan, Ont.

Lumber Wanted

We are in the market for a quantity of Soft Elm, Hard Maple and Birch, dry stock, for immediate shipment. Will also contract for stock for future delivery from 1-in. to 4-in. in thickness. State quantity, prices and full particulars. The London Lumber Company, Limited, London, Ont. 4-4

Spruce Wanted

Wanted a block of 1-in. and 2-in. dry or winter cut Spruce. The Elgie & Jarvis Lumber Company, Limited, 18 Toronto Street, Toronto, Ont. 4-4

Spruce Pulpwood Wanted

Spruce Pulpwood wanted of good size, merchantable quality, four-foot peeled preferred, on cars shipping point. Box 323 Canada Lumberman, Toronto, Ont. 4-7

For Sale–Lumber

For Sale

White Pine and Hardwood, estimated 300,000 feet, will cut to order. G. A. Patrick & Son, Delaware Saw Mills R. R. 2, Lambeth, Ont. 1-6

Poplar For Sale

For sale two cars 1-in. Poplar cut March, 1915. Enquire by letter to Knight Bros. & McKinnon, Limited, Box 569 Cobalt, Ont. 4-4

Lumber For Sale

200 Pieces 1 x 15 and up 22 ft. Cypress.
375 Pieces 1 x 15 and up 24 ft. Cypress.
Clear for boat building, in stock at Montreal.

GEO. C. GOODFELLOW,
c Montreal, Que.

For Sale–Machinery

FOR SALE—Second hand Bull Lathe, 60-in. swing, 84-in. bed. $150.00 cash; also a lot of Rubber Belting, 6 in. to 16 in., at Low Prices.

MOORINGS MACHINE SHOP,
1-4 40 Pearl Street, Toronto.

Boilers For Sale

Two horizontal return tubular boilers, 66 in. diameter by 15 ft. long, with 58 4-in. tubes. Box 309, Canada Lumberman, Toronto, Ont. 4-4

WOODWORKING MACHINERY FOR SALE—1 48-in. Berlin double-drum sander; 1 No. 3 Crescent Universal saw table; 1 Fay & Egan 12-spindle dovetailer; 1 40-in. MacGregor-Gourlay Band Resaw; 1 10-in. Berlin 4-side moulder; 2 30-in. Whitney pattern smoothing planers; 1 24-in. MacGregor-Gourlay Planer, Matcher and Moulder; 1 No. 235 Wysong & Miles Post Boring Machine; 1 MacGregor-Gourlay 2-spindle shaper. H. W. PETRIE, LIMITED, Toronto. 4-4

Engine For Sale

15 in. x 24 in. single cylinder Wheelock 115 H.P. in perfect condition. Box 310, Canada Lumberman, Toronto, Ont. 4-4

Machinery For Sale

A small "Ad" under this heading, telling of what machinery you have for sale, will immediately put you in touch with buyers. Send us a list of machinery items and we will quote you on a small "Ad." Send the list now, before you forget about it. 1-t.f.

Machinery For Sale

One McGregor Gourlay second hand Resaw, 54-in. wheels, carries 5-in. saws, machine in first-class condition, only used on light work. Located in Central British Columbia.

Two second hand McGregor Gourlay Q. Y. Planers and Matchers, one 9-in., one 15-in. wide, in good condition, ran every day till October, when fast feed Matcher was installed. Located in Saskatchewan. Box 275, Canada Lumberman, Toronto, Ont. 1-4

For Sale

Two 54 in. x 12 ft. Stationary Boilers, in use only 8 months, complete with full arch fronts, smoke box and stack, and all regular fixtures and fittings, working pressure 100 lbs.

WILLIAMS & WILSON, LTD.,
2-4 Montreal, Que.

Saw Mill Machinery For Sale

Second-hand Machinery for Complete Saw Mill, all practically new, in excellent condition, including Bullwheel, Steam Kicker, Steam Nigger, 42-in. Steel Carriage, 10-in. Steam Feed, 8-ft. Waterous Bandmill, 5-saw Slab Slasher, 48-in. Edger, Trimmer, also Independent Lath-mill, and Filing Room outfit. Power Plant complete. Offers accepted for all or any part. On view at the Waterous Engine Works Company, Brantford, Ont. t.f.

Wanted–Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

Wanted position as band saw filer, long experience and good references. Box 300, Canada Lumberman, Toronto, Ont. 3-7

WANTED to hear from lumbermen who anticipate needing a mill foreman this spring, by an experienced mechanic who can give results, open to engagement. Any capacity. Box 283, Canada Lumberman, Toronto, Ont. 2-5

Open for year round position April 1st to take full charge for company with large stock of logs interests of the sawing, grading, estimating and inspection of all shipments. Married man with twenty years of experience as lumber inspector and manager. Box 305, Canada Lumberman, Toronto, Ont. 3-4

Position wanted as band saw filer, double or single cut. Twelve years' experience, first class references. Box 317, Canada Lumberman, Toronto, Ont. 4-8

Wanted position by experienced lumberman, holding qualification papers for scaler in Quebec and New Brunswick. Last position, yard foreman. Box 314, Canada Lumberman, Toronto, Ont. 4-5

First class double cut band or circular sawyer wants position for the coming season, band preferred. Accustomed to left hand rig; habits sober. Can supply first class references. Box 319, Canada Lumberman, Toronto, Ont. 4-5

A young married man, 32 years of age, will be open for a position on or before March the first. Fifteen years' experience as inspector, scaler and estimator; will consider any other capacity; will go anywhere. Box 281, Canada Lumberman, Toronto, Ont. 2-4

Position wanted as Manager or Secretary-Treasurer of Lumber and Woodworking business. Thoroughly experienced in Lumber, Factory and Office routine. Good organizer and have record for producing best results. A1 credentials. 15 years with one large Ontario company; at present engaged. Box 318, Canada Lumberman, Toronto, Ont. 4-5

BAND SAWYER, five years' experience, references will speak for ability and habits.

FILER, six years' experience, references; no proposition too large.

FOREMAN, thoroughly understand organizing a plant for quantity and quality, a good education and practical man.

A line to the undersigned box number will put you in touch with one or all of these men. Box 304, Canada Lumberman, Toronto, Ont. 3-4

Wanted—Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents.

Wanted lumber salesman for Western Ontario. State age, salary and experience. Box 324, Canada Lumberman, Toronto, Ont. 4-4

Wanted first class band saw filer for season of 1916. Apply giving experience and reference to Box 321, Canada Lumberman, Toronto, Ont. 4-5

Wanted filer for circular mill in Ontario cutting hardwood, man who can do mill repairs. Must be abstainer. Steady job to good man. State wages. Box 316, Canada Lumberman, Toronto, Ont. 4-4

Business Chances

Wanted

A sawmill to run by contract by experienced men. Box 330, Canada Lumberman, Toronto, Ont. 4-4

Wanted

A Lath Mill to run by contract. Can give first class references. Box 329, Canada Lumberman, Toronto, Ont. 4-4

Factory Wanted

Wanted to rent substantial factory in Western Ontario. Prefer woodworking plant. Give particulars.

E. C. Bradley Lumber Company,
3-4 Cincinnati, Ohio.

Business Opportunity

Make your opportunity knock at the door of every Lumberman in Canada by placing a small "Ad" about it in this column. Our rate is $2.10 per inch per issue. Now is a time when monied men are seeking good bargains. What have you to offer? 1-t.f.

For Sale

Exceptional opportunity to acquire a going Lumber Business, Steam Saw Mill, situated on a never-failing stream, good Railway and other facilities; 75 per cent. of the timber large white pine. Plant operated last season. Owner obliged to sell on account of ill health. Box 325, Canada Lumberman, Toronto, Ont. 4-5

Partner Wauted

Successful Northern Ontario wholesale lumber dealer wants partner with fifteen thousand capital, as salesman in Southern Ontario; success assured. Apply Box 331, Canada Lumberman, Toronto, Ont. 4-4

Timber Investment

The owner of Twelve British Columbia surveyed perpetual Timber Licenses, comprising 6,944 acres, located along a large drivable river and containing from ninety to one hundred million feet of choice Fir, Spruce, Cedar, Hemlock and White Pine, including 30,000 to 40,000 large Cedar Poles; will give good title for Thirty-five thousand dollars ($35,000), or to anyone willing to provide Government dues of $1,304 yearly, will give proportionate interest until conditions improve and a more profitable sale can be made.

No commissions will be paid.

For full information address timber owner, Box 1550,
4-4 Victoria, B.C.

For you can be sure their transactions with you will not end when they have closed the business your single ad. announced.

Cedar Oil and Its Uses

Cedar oil is used in connection with the microscope as an immersion medium for oil immersion lenses, and its value for this purpose lies in the fact that its refractive index, or the degree to which light is bent in entering it from the air or other transparent mediums, is nearly the same as the white optical glass from which microscope slides and covers are made. The small section of tissue or other microscopic object is usually mounted in Canada balsam—the balsam obtained from the bits of the bark of the ordinary balsam fir, which, while soft in its natural state, dries to a tough resin of a transparent yellowish tinge and with a refractive index also nearly the same as glass. The object is covered with a small disc or square of very thin glass, the balsam in which it is mounted also acting as a cement to hold the glass covering in place.

In viewing the object a drop of cedar oil is placed upon it and the high power oil immersion lens is lowered into this drop of oil and focused upon the object. In theory, therefore, the cedar oil and the glass cover of the object, together with such thickness of the balsam mounting medium as intervenes, all become a part of the lens system of the microscope and the optical system may therefore be corrected for a constant condition and is not affected by the errors that would be introduced by successive passage through air and through the varying thickness of glass in the cover.

The volume of consumption, however, of both Canada balsam and of cedar oil, which are both products of the forest, is extremely small in this field. Crude cedar oil is used together with sawdust in some sweeping compounds, merely to impart an agreeable odor, and this is really its only use in the polishing oils that are used with oil mops upon hardwood floors.—American Lumberman.

Review of Current Trade Conditions

Ontario

The local trade in Ontario continues seasonably quiet. The cessation of orders for shell boxes has been a serious matter to the whole trade. During the production of shell boxes there was a brisk movement of spruce and several lines of hardwoods, but now these lines, in common with all others, are quiet. There is a certain amount of improvement in the demand for industrial purposes, although it is difficult to put one's finger upon any one spot. Building operations continue very quiet and it is not yet possible to form any idea of what the situation will be in the spring. It is not well, however, to count upon anything in the way of definite building activity during the coming spring. Some reports have recently appeared to the effect that the Imperial Munitions Board will again be placing orders for shells and shell boxes before long. The whole shell situation, however, is so uncertain and it is so impossible at present to obtain an authoritative statement regarding the policy of the Munitions Board that one can only indulge in guess work as to the shell box situation.

In the export trade to the United States conditions are much more encouraging. There is a good demand across the line for nearly all kinds of Ontario lumber. If it were not for this particular bright spot in the trade, conditions in Ontario would be far from good. Industrial activity and prosperity continue to broaden in the United States and the cities along the borders of the great lakes are feeling it as much as any others. This is making a good demand for the chief lines exported from Ontario.

Eastern Canada

The local trade at Montreal continues quiet, but trade with the United States continues on a fairly active scale. Prices for the United States stock are satisfactory. The shell box business at Montreal is quiet at present, but there are rumors of new orders which are likely to be placed during the present month. Some enquiries for shell box lumber have reached Montreal from Ontario firms. The outlook for trade throughout Quebec province is not especially good, but it is expected that improvement will take place during the spring. It is probable that this year's trade in the province will be at least as good as last year's. In the country districts, good prices for the agricultural products of last year are likely to cause a fair amount of trade in lumber.

The foreign lumber market for St. John stocks has continued quiet during the past fortnight, although a certain amount of stocks are being moved all the time by the Admiralty. Charters continue to advance in price. Recent reports are of charters at 265 shillings to the west coast of England and Ireland, and additional considerations for the vessel owners. The United States market continues strong and with a tendency towards higher prices. There are quite a number of enquiries out for shell box lumber, but stocks are scarce. Lath continue firm. Cuts for 1916 have been sold at a little higher than for 1915. Shingles are unchanged. Local trade is quiet as building operations are very light.

The eastern spruce market at Boston is very firm. Random orders are plentiful. Full car load lots are quoted at:—2x3, $21; 2x4, $22; 2x5, 2x6 and 2x7, $21 to $22; 2x8, $24.50 to $25; 2x10, $25.50 to $26; 2x12, $26.50 to $27. For quick delivery or assorted cars at least 50c more is asked. Improvement is reported in the demand for spruce boards and quotations are strengthening. The best matched spruce boards, 10, 12, 14 and 16 ft. are bringing $25. The hardwood market at Boston continues steady and the demand is good. Furniture and piano case firms are showing a tendency to increase their stocks. A little more interest is reported in basswood which is bringing $43 to $45 for 1 in. firsts and seconds. Birch is very active with 1 in. firsts and 2nds in red bringing $53 to $55 and in sap $45 to $47. Hemlock is not over active at Boston, but there is a better demand than there was earlier in the winter and quotations have improved. Shingles are rathr quiet at Boston on account of the unseasonable weather. Manufacturers, however, expect the market to strengthen and some of them have revised their prices upward. White cedar extras are bringing $3.50 delivered in Boston and clears $2.90 to $3. Red cedars are firmer, best extra clears bringing $3.63, even $3.68 and $3.75. There is a moderate demand for lath, but quotations are uncertain.

United States

It seems to be impossible to over-estimate the extent of the trade revival which has spread throughout the United States during recent months. Although this improvement was originally the result of the demand for war material, it is no longer dependent upon war orders. Industrial centres in all parts of the country are active, and the domestic demand is playing a very large part in the general industrial improvement. The steel industry continues at the highest possible rate of production. Every old furnace and mill that can be made to do service is in motion and extensive construction work is being done. Steel prices continue to advance and contracts are being made for delivery as far ahead as the first half of 1917. Other influences have been noted in previous reports, chief among these is the enormous crop yield which has brought the highest prices that have prevailed in many years. The most encouraging situation in connection with the lumber business is that in connection with the railroads. The normal requirements of the railroads have been estimated to average about 200,000 new cars per year. During 1915 orders placed for cars amounted to less than 108,000 cars, the majority of these orders being placed during the last half of the year. Railroads are continuing to report substantial increaess in gross and net earnings. All of the car builders in the country report heavy orders on hand. The constantly increasing cost of steel is making the railroads turn over to wood for the construction of their cars.

Yellow pine manufacturers continue very hopeful about the outlook. The heavy demands by railroads have broken up assortments so badly that many mills have been obliged to decline orders for certain sizes and lengths of stock. On the whole, stocks in mill yards are light. A recent enquiry is reported for 41,000,000 feet of yellow pine for one of the European governments, with transportation facilities guaranteed. Another enquiry is for 750,000 yellow pine ties, that seems to come from reliable sources. The extensive curtailment of production on the Pacific Coast has added strength to the southern yellow pine situation. Since our last issue another heavy snow storm has occurred, causing continued idleness at practically every mill and camp. Advances of from $1 to $3 per thousand feet are reported on Pacific woods.

Hemlock has recently attained a strong position in the lumber market. Stocks have been greatly depleted, prices have advanced, and the situation is more satisfactory now than it has been for some time.

Great Britain

Continued activity is reported in the spot market at London. Very little forward business is taking place, but purchasers are plentiful for such suitable stock as is available for immediate use. Values are very high and there is no sign of a decline, as freights for the opening of navigation seem likely to advance rather than to recede. Deliveries at London docks for the week ending January 15th amounted to 3,313 standards as compared with 3,970 standards during the corresponding week of 1915. At Foy, Morgan and Company's recent auction sale 1 x 4/7-10 to 16 ft. first Quebec pine brought £30 5s. A lot of 2 x 11 unsorted Quebec red pine 12 x 22 ft. brought £27 10s. while 2 x 8-12 to 24 ft. brought £25 and 2 x 5-12 to 24 ft. brought £22 15s. Red pine 3 x 9-12 to 16 ft. from Montreal brought £26 15s.

The c. i. f. market for spruce at Liverpool is now confined to small parcels on consignments and they indicate that the position is firmer than ever. From all appearances owners are more inclined to hold than to sell. Shippers are offering for later shipments on a base of 200s freight, which, from all accounts, is the minimum at which tonnage will be available either steam or sail. Place has been reported to have been secured by liners at 215s. The spot market at Liverpool continues firm in all lines. The demand for consumption is strong and many large consumers admit that their stocks will not carry them for more than two or three months. Most of these will continue to deplete their stocks until they are forced to buy. Most of the importers are carrying much smaller stocks than usual, and are likely to have trouble in replenishing, on account of the scarcity of tonnage. C. i. f. birch prices are very firm. F. o. b. prices have increased. Shippers are very firm for logs, planks or boards. The spot maket for birch is firm and stocks are strongly held with a slight improvement in the demand. Values should rise rapidly. Present stocks are ample in most regards, but there is a shortage of the favorite sizes.

At Manchester, the timber trade is feeling the effect of the war more and more each week. Steamship owners who carry timber from Norway and Sweden are declining to entertain timber at any price. Spruce deals continue to advance. Scantlings are held at

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. Bole, Pres. F. H. Goff, Vice-Pres. E. C. Barre, Gen. Mgr. W. A. Saurwein, Ass't. Mgr.

£22 per stadard ex quay, with other sizes in proportion, and the prospects are for repeated advances. There is a fair amount of flooring and spruce on the quay, but most of it is sold, and when it is cleared away the pinch will be felt by those who have been afraid to buy.

At Glasgow, spruce continues to be the brightest spot in the market, the demand being well maintained even in the face of rapidly advancing prices. Consignments coming forward are quite insufficient to meet the demand. There is no knowing what the future prices of spruce may be. A few sales are reported in 3rd and 4th quality yellow pine deals at very firm prices, but there is no movement to report in better grades of deals and sidings.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Trade Still Quiet at Montreal

Montreal, February 10th (Special to the Canadian Lumberman): Trade in lumber is still on the slow side. The local market is the weak spot, as business with the United States is keeping up very well, considering the time of the year, and prices are satisfactory. Some of the firms making shell boxes are still closed and others are not very busy. There is a prospect that further orders will be given out by the Ottawá Committee during the present month. Ontario firms making boxes have been making inquiries here as to suitable lumber.

Although the outlook for the immediate future is not particularly good, there is reason to believe that business will soon pick up, and that the demand from the Province of Quebec will be at least equal to that of 1915. The country districts were not affected to any extent by the conditions which affected Montreal, and with high prices for agricultural products there is a likelihood of a fair trade in lumber.

The building permits for last month totalled $174,160 as against $203,261 in the corresponding period last year.

The sulphite pulp market continues strong, with a prospect of further advances. The embargo by Sweden on pulp going to Great Britain is the dominating feature, and this has resulted in additional inquiries coming to this side. The conditions in Norway and Sweden all make for higher prices. Ground wood is in moderate demand.

St. John Trade Quiet—Charter Rates Still Advancing

St. John, N.B., February 10th; (Special to the Canada Lumberman):—There is practically nothing new to report on the local or foreign lumber market during the last two weeks. The Admiralty are moving a certain amount of stock all the time, as they are about the only ones who have any tonnage at their command. Boat after boat which has been chartered to load here has been requisitioned for army supplies. Charters are being made today for coast of England and Ireland at 265 shillings, with the boats getting half freight in advance and many other perquisites. This tremendous rate of freight has a dampening effect on all buyers of deals, as they do not know where the rates will stop and are therefore afraid to gamble. About all the cuts of deals at St. John have been disposed of and some two or three mills have sold ahead their English deals for 1916, at prices slightly in advance of 1915.

The American market continues steady at a base price of $26 Boston points, and it does not look now as if there would be any decrease in price or demand. Many inquiries are on the market for shell box lumber, which is largely 1¼ in., but it is hard to find any persons who have dry stocks of this size.

Laths remain firm and cuts of laths for 1916 have been disposed of at a little higher than 1915.

Shingles remain unchanged, although if the long lumber market in British Columbia is any criterion of the shingle market, we shall no doubt have an advance in our shingle prices as Western shingles are our greatest competitors, and it is understood that not nearly so many logs are being cut this year as last. A further advance of $3 per thousand took place in B. C. for lumber today. If any market needs reviving it is our shingle market.

Locally, we are marking time, as no work is offering and it looks unlikely that we will have any building craze this year, unless the war should suddenly end, when it is felt that people would regain confidence. Merchantable spruce boards, dry stock, are extremely scarce, as everything in the way of boards was bought up some time ago. These are mostly going to the allied governments, who are providing a good deal of tonnage.

Logging around the lower sections of the river is extremely difficult as we have not had over five inches of snow all winter and this only stayed a few days. We are now having more snow and it is hoped it will remain until the yards are cleared. On the upper St. John good weather prevails and the work of hauling logs to banks is going along in good shape. About 2½ feet of snow now covers the whole upper reaches of river. The cut will be normal.

The Freight Problems for 1916

In view of the great importance of the freight situation in connection with shipments of lumber from Canada to Great Britain, reference to this matter in a recent issue of the Timber Trades Journal of London, Eng., dealing chiefly with shipments from the White Sea, and the Baltic, is of interest. In its issue of January 22nd the Timber Trades Journal says:—"Improbable as it may seem, the question—Is it possible for the freight market in 1916 to follow the same course as last year?—is now being seriously considered. Will the first fixtures eventually prove to be cheap charters owing to a steadily advancing freight market, as the season progresses? With regard to the White Sea, the selling season not having generally commenced, less attention has been given to the question than in the case of the Baltic, but, as we mentioned last week, 200s. is stated to have been paid from Archangel to London. As to Sweden, negotiations have been in train in various quarters, and a few fixtures are reported. As far as owners are at all agreed at present, it is in the detemination not to charter ahead except at a considerable advance on the highest rates of last year, and we hear of 120s. and rather more having been paid in one or two instances to London, and 140s. to the South Coast. No one can safely prophesy, but if we assume little change in the international situation except that the war will be waged on a larger and more extensive scale, it is clear that the tonnage requirements of the belligerent Governments will be enormous, and the neutral boats left for private chartering will thus have the market at their mercy. The position must be faced; steamer room will be very precious while the war lasts, and we should say that, as in 1915, merchants will have no cause to regret any fixtures that they may make early in the season."

In another article in the same issue the following appears:—"Canadian deal shippers are reported to have chartered a steamer for two voyages next season to West Britain, East Ireland range at 200s. per standard, and the same rate has since been freely offered for further cargoes, but so far it does not appear to have been again accepted.

"For pitchpine 450s. has been paid from the Gulf of Mexico to West Coast of U. K., for a boat of handy size but backward position, and this could be repeated; but, for the River Plate, on account of the great increase in outward rates thence, charterers who were last week quoting 400s., dropped their offers to 375s., although there seems little or no chance of their expectations of cheaper freight on that account being realised. To West Italy 500s. continues to be offered, and no doubt could be exceeded, but owners do not appear to consider this employment so attractive as grain for the same voyage at current rates.

"The rate of freight for sailers from the Gulf pitchpine ports to West Britain has made a further big jump, 390s. having now been paid against 400s. demanded by owners of other available vessels, this sharp rise in the basis of rate being attributable to the improving demand for this class of carriers and the dwindling supply.

Big Export Year for Genoa Mills

In the exportation of lumber during 1915 the Genoa Bay mills established a new record for Vancouver Island. During that year well over 14,000,000 board measurement feet of lumber were shipped from the Vancouver Island lumber mills at Genoa Bay to Europe, New York, South Africa, California and Mexico. This large total would doubtless have been exceeded during the last twelve months but for the lack of tonnage on the Pacific. Large orders have been placed, but the ships have not been available to deliver the cargoes. Many shipments were also held up by the Panama Canal slides. New York was the largest buyer during 1915, with Europe second, and South Africa a close third. From Genoa Bay to New York there was shipped a total of 5,097,097 feet, to Europe 2,898,718 feet and to South Africa 2,379,857 feet. One cargo of 2,275,090 feet was shipped to Toronto, Ont., by the steamer Bessie Dollar, this being the second shipment of a 25,000,000 feet order.

"Everything in Canvas"

Contractors to the Army and Navy of the British Empire

DURING the past few years our manufacturing facilities have increased fourfold. The amalgamation of the Woods Company, with the Smart Bag Co. into which it is now known as Smart-Woods, Limited, offers for your approval the products of one of the strongest and most reliable manufacturing corporations in the whole of Canada.

AS a result of this amalgamation, not only have our manufacturing facilities been wonderfully increased, but we are now in a much better and greater position to offer you all lines previously stocked, as well as many others that come direct from our recently added factories.

In addition we may say, "Our foreign trade has increased by leaps and bounds—both European and American—and we are prepared to enter into competition in every civilized portion of the globe."

Smart-Woods' Special Surveyor's Tent. Write for Catalogue.

WE are now open for competition in every thing that is possible to be made out of canvas, as well as all lines of Lumbermen's and Contractor's Supplies, such as Blankets, Clothing, etc., etc., it being one of our greatest pleasures to quote prices at any time. Our wonderful large stocks of raw material and increased number of factories, (Ottawa, Toronto, Montreal, Winnipeg, Renfrew and Welland), enable the execution of largest orders on shortest possible notice.

Samples and quotations will be furnished at any time and every possible expediency rendered to hasten shipments as soon after ordering as possible.

An Outline of B. C's. Chief Industry

Timber Licenses and Leases Explained—Advertising Campaign—Ocean Tonnage Greatly Needed

By Hon. W. R. Ross*

Many vague estimates of the extent of British Columbia's forests have been put forward in past years. Because we need reliable information in order to manage our forests intelligently I began a forest survey in 1912. A very considerable area has already been covered by the cruisers engaged in this survey. The figures obtained give us something definite to go upon. Besides the eight and one-third million acres under timber license, a million acres under old timber leases, a million acres of deeded timberland, three quarters of a million acres held under railway grants—besides these alienations we find that the Crown Timber Reserve, created in 1907, is very considerable. For instance, in entering the results of various forest surveys on the maps last year there were one million acres of reserve timberland dealt with, apart from very large areas containing lesser stands of timber and pulpwood. Hence, the estimate of 350 billion feet of merchantable timber now awaiting cutting in the Province is being called into question as it becomes more and more probable that the effective total will reach 400 billion.

B. C.'s Wood Assets

Take the Coast forests—say a solid third is Douglas Fir, which taken all around is the finest all round wood in the world; over one-fifth is Cedar—British Columbia is pre-eminently the Cedar region of America, thanks to the Coast rainfall. Then think of our immense stand of Western Hemlock. The world is now beginning to realize what Western Hemlock is. Our pulp and paper mills have done great things with it already, but the big uses of this wood are only just beginning. Western Hemlock is destined to take the place of Eastern White Pine for very many purposes, and at no distant date. Then take our fine interior forests. Seven thousand out of 13,600 square miles of timber licenses are East of the Cascades Mountains, so you see our interior country is pretty strongly represented in the timber asset.

The financial world naturally takes a particular interest in the question of tenure. Crown grant timber, of course, is just deeded timber—there is nothing to explain about that. Then the old leases are simple enough—rentals of 10 or 15 cents per acre per annum and a royalty on cut logs of 50 cents are the terms in most cases up to the years 1921 to 1925, during which period the bulk of these leases will come up for renewal for 21 years ahead, obtaining whatever rates of rental and royalty are then provided by statute. The timber license tenure is rather more complicated, however.

The Problem of Tenure

The original problem was extremely complicated. An immense timber resource was idle and unproductive, contributing next to nothing to the development of the Province. We permitted the staking of timberlands—anyone could stake cutting rights over a square mile of timber by paying $140 a year rental and paying a certain stumpage (we call it royalty) on such logs as he might actually cut. That was a good proposition for the lumberman who wanted timber for a mill and did not want to sink capital in buying stumpage ahead. But there were strings on this concession in the public interest. Neither the annual rental (which is a sort of interest charge) nor the royalty on cut logs was fixed. They could be changed at any time to meet any rise in timber values that might occur. So the public was well protected. On the other hand it was left to the changing opinion of successive legislatures—(ours are elected every four years)—to decide what rental or royalty should be charged. That uncertainty gave British Columbia timber licenses a weak standing as securities, and made the financing of the lumber business difficult in consequence.

Rentals for Long Period

For a time no solution of this problem could be found. In the end, with the co-operation of the parties affected, a basic principle was worked out, and then we passed the Timber Royalty Act of 1914. That gave security of tenure to the licencee—fixed a rental for forty-five years ahead and a royalty on a sliding scale. If the wholesale selling price of lumber throughout the Province goes up above a certain figure the royalty goes up. If it goes below that figure there is a definite royalty charge to correspond. The people of this Province and the lumbering industry are, therefore, partners in the timber. The terms of the partnership are straightly defined. There is no more room for uncertainty, as is the case with timber or timberlands in the Western States for example, where taxation may increase several hundred per cent. in a few short years. The timber license of British Columbia is henceforward an absolute safe security.

The development of the lumber business of British Columbia is a matter of transportation. The Province has developed a fine system of railway transportation inland; so far we have not done the same seawards. There has been chronic congestion at the Coast, a lack of sea going tonnage that has been stifling our export lumber trade. Remove that and the rest follows—expansion in the lumbering business, foreign markets, activity in every form of commerce.

No Lack of Plant

A mill capacity of 2½ billion feet—we shall soon increase that when we have ocean transportation to take up the business offerings from all over the world that we are obliged to turn down to-day. An actual output, in these hard war times, valued at twenty-nine million dollars, a thousand million shingles shipped to market in the year; the new pulp and paper industry producing three million dollars a year already; some of the largest plants in the world for saw and paper mills—these are a few points that show our lumbermens' activity. Let us once secure ocean transportation and, make no mistake there will be doings in the lumbering business, and a rise in the value of British Columbia stumpage. And this Government is running an advertising campaign directed at the Prairie, Eastern and foreign consumer of lumber that is going to make an appreciable difference to the demand for our forest products. We are out to do our level best to secure prosperity through a prosperous lumbering industry based on a wealth of timber resources.

* Reproduced from the Canadian Forestry Journal.

Sawing Frozen Timber

A chisel tooth saw, up to the time the frost comes, may work in an entirely satisfactory manner then suddenly refuse to do anything. The sawyer, in trying to make it go by changing the adjustment of the guides and the "line" of the saw is liable to strain the blade, force it over the collars, and put it in such shape that a trip to the factory is necessary. By following the few simple suggestions contained in this article, this expense, delay and annoyance may be avoided.

First: To cut frozen timber successfully the shanks or holders, should be new or practically so, and should be of the swaged or flanged pattern. Therefore, before starting to cut frozen timber, see that the holders are in good shape, sharp on the inner edges, otherwise put in a new set of swaged holders.

In cutting frozen timber a fine saw dust is formed, which, not being properly clambered by worn holders passes down the side of the saw, freezes to the log, forcing the saw out of the cut, thus preventing good work. New swaged holders keep the cut clear of this fine saw dust, permit the saw to run cool and cut a true line. The insertion of a new set of holders also slightly stiffens the tension of the saw.

Second: Use narrower bits than usual. When a 9-32-inch point is used in the regular work, bits ¼-inch wide on the cutting edge will often suffice and do better work.

Sometimes it is possible to use bits which have been discarded by filing them carefully so they will have good sharp corners. The fact that these worn bits are shorter than when new, will be found advantageous.

It is absolutely necessary to keep the corners of the bits sharp and square on the cutting edge to sever the fibres of the wood thoroughly, thus avoiding the rough, stringy surface often occurring in some kinds of timber when the fibres are torn.

Where the corners of the bit are in such condition that they rub back of the extreme cutting edge, good work can not be expected. Therefore keep the corners sharp and widest and the shanks fully swaged and do this before attempting to saw when the timber is frozen.

When inserting new shanks and new bits always oil the sockets. —Disston Crucible.

Opportunities for Railway Ties in South Africa

Mr. W. J. Egan, Trade Commissioner, Cape Town, has forwarded to the Department of Trade and Commerce, Ottawa, specifications and tender form in connection with the supply of sleepers for South African railways. The following are the dimensions and number of sleepers required in a tender which closed on Jan. 31st:—

Dimensions.	Number Required.
7 ft. x 10 in. x 5 in.	65,000
6 ft. 6 in. x 9 in. x 4½ in.	32,500
7 ft. x 10 in. x 5 in.	20,000
7 ft. x 10 in. x 5 in.	20,000
7 ft. x 10 in. x 5 in.	195,000
6 ft. 6 in. x 9 in. x 4½ in.	97,500

Although jarrah or other hardwood is called for the chief engineer in charge of the construction of South African railways and harbors has intimated that when exporters of railway ties from Canada furnish certificates from engineers who have used the creosoted Canadian tie, to the effect that the Canadian tie has given satisfaction, an order will be placed for a trial shipment of same to the South African market.

Do You Want a Salesman?

¶ Every live lumber salesman in Canada reads the Canada Lumberman and Woodworker.

¶ You can get the man you want through a small advertisement in the "Wanted and For Sale" department of this paper.

Canada Lumberman & Woodworker
Toronto, Ontario
Montreal Office, 119 Board of Trade Bldg.

Not altogether what we say but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

West & Peachey - Simcoe, Ont.

It Takes Mighty Good Chain to Give the Service you Demand

Few conditions are so severe—or will so thoroughly test the real worth of chain as logging and conveyor work.

AJAX Loading Chain

has successfully met every condition and test—it has been pronounced by ninety per cent. of all the lumbermen in the country as being the best—they use it.

If you are still in the minority—one of the ten per cent.—won't you try to prove this for yourself? Try it once—you'll buy it always.

EDGINGS

Ontario

A small fire occurred recently at the planing mill of Mickle, Dyment & Son, Gravenhurst, Ont., causing about $1,500 damage.

The Canadian Western Timber and Fuel Company, Limited, has been incorporated with head office at Fort Frances, Ont., and capital stock of $40,000.

The township of Bentinck, Ont., are calling for tenders for 12,000 feet of cedar flooring in 14-ft. lengths. The township Reeve is Mr. Geo. Brown, Bentinck Township, Bentinck, Ont.

The frame of Councillor Henderson's new sawmill at Acton, Ont., has been raised and enclosed. The new building is fifteen feet longer than the old one. The machinery will be installed in time for the spring sawing.

The Colonial Lumber Company's steel burner at Pembroke, Ont., fell over recently, causing considerable loss to the company. It is to be rebuilt at once, and the company hope to have it ready for use when the mill opens in the spring.

The Rainy River Electric Light & Power Company, Rainy River, Ont., intend to erect a sawmill in the spring. They have not yet decided as to the size of the plant. Mr. W. H. Green is manager of the company.

The Cockburn Concrete & Lumber Company, Dundas, Ont., has started work on a new planing mill and set of offices on Colborne Street. The company intends to move its lumber business from King Street to the site.

The old Barr & Morris sawmill at Pembroke, Ont., has been dismantled of its mill machinery, which has been sold to Harry Richards, of Dacre, Ont., who is rebuilding his mill, which was destroyed by fire a few months ago.

The Eldridge Lumber Company Ltd., has been incorporated with head office at Toronto, Ont., and capital stock of $40.000 to carry on business as manufacturers and dealers in wood and lumber and all products of the forest. Those interested are Wm. H. Irving, H. H. Davis and J. R. Rumball.

The Ontario Paper Company Ltd.. Thorold, Ont., have awarded a contract for the erection of a sulphite mill at Thorold. The equipment will include two digesters 15 x 49, furnished by the Chicago Bridge & Iron Works, Bridgeburg, Ont. The plant will have a capacity of 50 tons of sulphite per day and will be of steel, concrete and brick construction. Work will start early next spring. The manager of the company is Warren Curtis, Jr.

Mr. A. G. McIntyre, formerly manager of the Bathurst Lumber Company's pulp mill at Bathurst, N. B., reports that he is not as yet in a position to make public the names of the parties interested in the new bleached sulphite mill to be erected in Ontario, with whom he is now associated. He adds the following information: Mr. J. H. Thickens, who was formerly general superintendent of the Bathurst plant, has been appointed manager. Mr. A. A. MacDiarmid, chief engineer, has accepted a similar position with Mr. McIntyre's new interests, as has Mr. A. G. Hinzke, superintendent of the sulphite mill, and Mr. J. G. Mayo, assistant to the manager. All of these men will be connected with the new company, which will build a 75-ton bleached sulphite mill in Northern Ontario. Mr. T. R. H. Murphy, formerly with Joseph H. Wallace & Company, New York, is associated with the new company as civil engineer, Mr. Geo. H. West as electrical engineer and Mr. A. W. Block as assistant sulphite engineer. The offices of the new company will be at 706-709 Traders Bank Building, Toronto, where plans are now under way for hydro development. The new company controls about 1,000 miles of spruce timberland, of good quality pulpwood, and water power developments of about 20,000 horsepower.

Eastern Canada

Capt. E. Kinnie, Riverside, N. B., has sold his planing mill and woodworking plant to Hall Lea, of Moncton, New Brunswick.

The sawmill belonging to Joseph Boule, Loretteville, P. Q., was recently destroyed by fire, the loss amounting to $6,000. There was no insurance. The owner will rebuild and will be in the market for general sawmill machinery.

E. N. Hebert, Limited, have been incorporated at Montreal to manufacture timber, lumber, logs, pulpwood, etc. The incorporators include R. Chenebert, P. Canmartin, P. Gregory, A. Tracy and J. Robitaille. The authorized capital of the company is $20,000.

The Harmsworth paper plant at Grand Falls, Newfoundland, which supplies the newspapers owned by Lord Northcliffe, of England, was the scene of a fire on February 2nd which destroyed thousands of cords of barked wood. The probable loss was estimated at $100,000.

The Miner Lumber Company, Limited, has been incorporated with head office at Montreal, P. Q., and capital stock of $50,000, to carry on business as manufacturers and dealers in all kinds of lumber and timber, etc. Those interested are R. H. Miner, J. K. Quackenboss, J. O. Pelland and E. G. Place, all of Montreal.

The sawmill of the Richards Manufacturing Company at Kedgwick, N.B., on the I. N. R. was totally destroyed by fire on February 2nd. The mill has been operating for some years, and this season was working night and day, giving employment to over a hundred men. The loss is partly covered by insurance. Plans are already under way to rebuild a larger and more up-to-date mill. None of the manufactured lumber was destroyed.

For the 17 months to November 30 the earnings of the Wayagamack Pulp and Paper Company totalled $584,373, the net profits being $286,873. An increase of $145,000 in logs and pulpwood is the chief change in current assets. In his report the president, Mr. J. N. Greenshields, K. C., stated that the capacity of the company's plant had been brought up to 150 tons a day, by the expenditure of $317,334 on capital account, and that the entire plant was in a high state of efficiency, $103,335 having been expended on maintenance and renewals. Mr. Greenshields also stated that the company had on hand

large export contracts for shipment to England, Australia and South Africa. These were taken at good advances over last year's prices, and the result is expected to be shown favorably in next year's balance sheet.

Since the extension of the Chaudiere branch of the Quebec Central Railway, lumbering operations have increased greatly at St. Camille, Daaquam and English Lake. A large amount of pulpwood, railway ties, square birch logs, and telegraph poles have already been taken out of the woods for immediate shipment. Mr. B. C. Howard, of Sherbrooke, has erected a large sawmill at English Lake. The Murray and Gregory Company have also a sawmill under construction, in connection with their business on the same lake. These two mills are expected to cut many millions of feet of lumber this coming season.

Western Canada

H. Butterfield, Squamish, B. C., is contemplating the erection of a shingle mill on the pillchuck River.

The Albert Lumber & Supply Company, Limited, has been incorporated with head office at Calgary, Alta.

Grest Bros. Lumber Company, Limited, have been incorporated with head office at Watrous, Sask., and capital stock of $50,000.

D. D. Currie & Company, Limited, have been incorporated with head office at Saskatoon, Sask., and capital stock of $20,000, as dealers in lumber, etc.

The Penticton Lumber Company, Penticton, B. C., report that they have filled orders for delivery to prairie points of 250 cars of lumber during 1916. The mill will employ between thirty and forty men.

The Crow's Nest Lumber Company, Wardner, B. C., have a large crew at work overhauling the mill getting ready for an early resumption of sawing. The company will build a large brick pump house. The planing mill has started up again after a few days' idleness for repairs.

The Western Canada Lime Company, Limited, has been incorporated with head office at New Westminster, B. C., and capital stock of $100,000, to carry on the business of manufacturing wood in all its branches, and will operate a sawmill, shingle mill, box factory and barrel factory.

The Canadian Pacific Lumber Company, Port Moody, B. C., are overhauling their plant with a view to commencing operations in the spring. Their planing mill has already been put in operation. The company have on hand, in yard and sheds, about 5,000,000 feet of dry lumber.

The Hadden and McNair shingle mill at Cloverdale, B. C., report that they are doing a good trade cutting a special line of 24-inch shingles for the Pennsylvania market. The mill operates three machines, with a capacity of 15,000 each per day of ten hours. Steam power is used. The dry kiln has a capacity of 800,000 shingles. An auxiliary steam engine of eight horsepower drives a 35-light dynamo for lighting.

The Vancouver Creosoting Company is securing exemption from taxation and other encouragement from the North Vancouver District Council in connection with their plan for constructing a $150,000 plant. It is expected that the plant will be completed early in April. The plant is expected to employ 40 men at first and 100 men in the second year.

A new sawmill built by Mr. R. D. McLean on the Nicomeki River, near Cloverdale, B. C., has been completed and will begin operations as soon as the weather moderates. Electric power from the B. C. E. R. will be used, a 75 horsepower motor having been installed. Up-to-date machinery forms the equipment of the mill, the capacity of which will be about 20,000 feet per day. The logging camps will be located one and a half miles up the Nicomeki River. The equipment includes a circular, with top saw, and a carriage to carry logs up to 40 feet.

A New Toronto Wholesale Lumber Firm

Hart & McDonagh, a new wholesale lumber firm, have opened offices in the Continental Life Building, Toronto. They will handle birch, basswood, elm, ash, maple, spruce, pine and hemlock, specializing in birch of which they have on hand large dry stocks. The large majority of the stock is being sawn 2½ in., 3 in. and 4 in. thickness, specially suitable for munition work and rifle butts. Mr. R. McDonagh the manager of the new concern is well known to the lumbering interests of the north country and has had a wide experience in the different branches of the trade. For eight years he was employed with the Trout Creek Lumber Co. of Powasson, one year as manager for James McBurney & Sons at Callender, and for four years with Edward Clark & Son, as buyer and inspector. For the last year prior to starting in business for himself he was with the J. H. Eyer Lumber Co.

Mr. Geo. P. Hart, the Secretary-Treasurer of the new firm was for five years with the Standard Bank. He is a partner of Stewart & Hart, railway contractors of Pembroke, Ont. The wide financial experience of Mr. Hart and the long and practical connections which Mr. McDonagh enjoys, augur well for the success of the new firm. The Canada Lumberman wishes them every success.

A newspaper despatch was recently given wide publicity in the Canadian press, to the effect that orders for 40 million dollars worth of lumber, timber, etc., were about to be placed in Canada, according to a statement made by a member of the British Purchasing Commission for the Allies. The report went on to state that the stocks were wanted for huts, trenches, railroads, etc., in the war areas of Belgium and France. The Department of Trade and Commerce cabled to the Canadian High Commissioner at London regarding this report and has received in reply a cable that no delegate on the Allies Purchasing Commission has any knowledge of these orders.

CLARK BROTHERS COMPANY, OLEAN, N.Y.

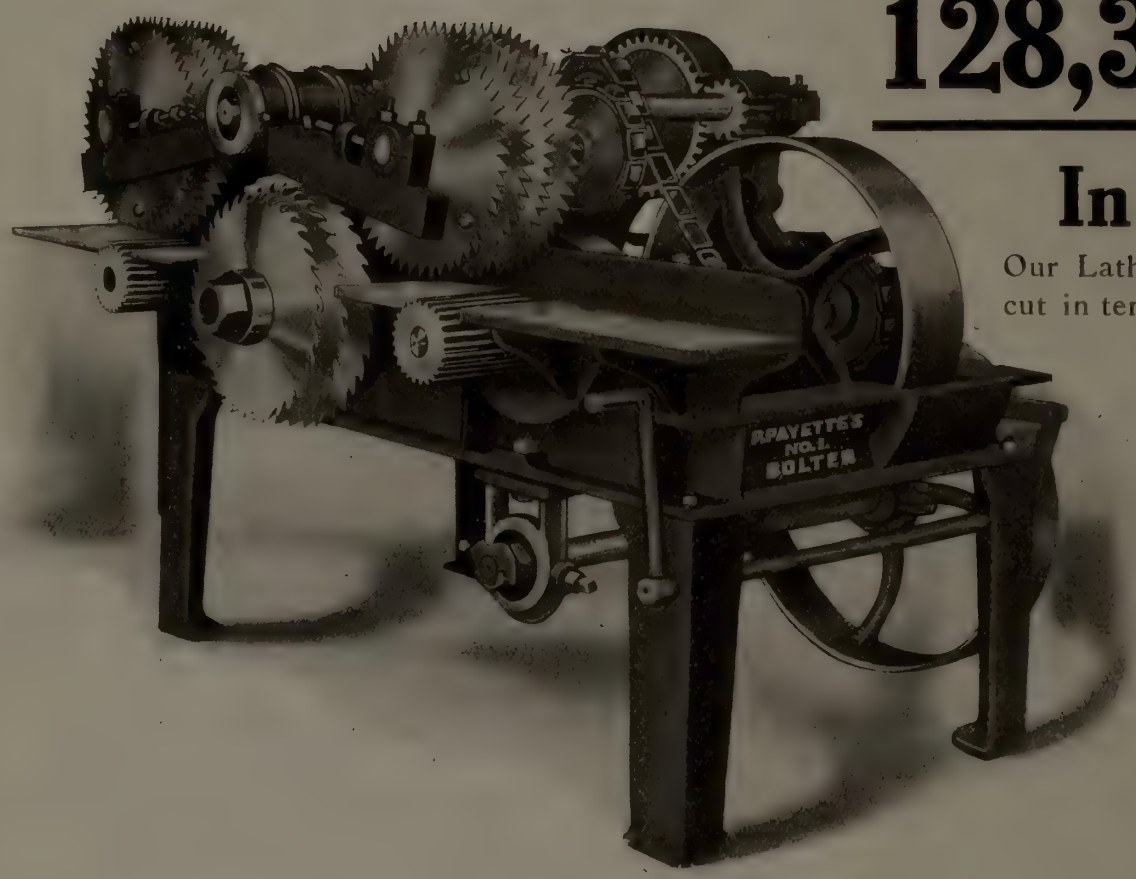
MANUFACTURERS OF

Saw Mill Machinery

Our line consists of all machines required for the equipment of a modern saw mill.
Also we are prepared to make the drawings for your new plant showing the proper arrangement of the machinery and the correct construction of the saw mill building and power plant.
We have designed and furnished the complete machinery equipment for many Canadian saw mills, and we ask, if you are considering the development of a timber tract, that you write asking for our Canadian representative to call on you.

CLARK BAND MILLS AND RESAWS

are to-day being operated by some of the largest lumber manufacturers in Canada.
We can refer you to plants cutting from 30,000 to 200,000 feet of lumber per day.



128,350 Laths

In Ten Hours

Our Lath-Mill and Bolter have made a test cut in ten hours of 128,350 four foot laths, 1½ in. by ⅜ in., counted, tied and piled.

We also make a full line of Lath-Mill and Picket-Mill Machinery, for mills, both large and small.

A Few of the "400" who use Payette's Lath-Machinery:

Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

W. W. Cory,

Department of the Interior, Ottawa,
December 20th, 1912.

Deputy Minister.

GOODHUE BELTING For Saw and Planing Mills

In a Goodhue Belt you get only the best leather with the stretch taken out of it. A Goodhue Belt will always run evenly and "clings" to the pulley transmitting 100% of your power.

For the wet places in the mill we have a special waterproof leather belt—"Acme". Other Goodhue Belts are "Extra" and "Standard" recommended according to the conditions under which the belt has to run.

Goodhue Belts stretch less than any other belt by 15 to 25 per cent.

Send for prices and particulars.

Labor Saved Is Time Saved

When to this is added increased durability we have the economy that naturally results from larger output and long service.

These are some of the strong points in favor of

Disston Cross-Cut Saws

They are ground to a true taper all the way from cutting edge to an extra thin back. Being ground on lines that conform exactly to the breast of the saw, the blade is absolutely uniform in thickness throughout the entire length of the cutting edge. This special method of grinding gives the maximum amount of clearance with the minimum amount of set, without sacrificing elasticity and stiffness. You know that all these points are good points, and substantiate our claim that Disston Cross-cut saws are unexcelled.

You will find a lot of valuable information in our Cross-Cut Saw Booklet. Sent free on request

Reduce your haulage cost with *National Motor Trucks*

The Motor Truck is an accepted method of transportation. Its use has been demonstrated in hundreds of businesses, and for hauling almost every commodity. Motor Trucks are essential to commercial activity—it only remains to select the right Truck to get maximum service at minimum cost.

NATIONAL MOTOR TRUCKS have established their worth through daily service under the most severe treatment—heavy loads, bad roads and adverse weather conditions.

One of the four NATIONAL Models—1,500 pounds, 2,000 pounds, 4,000 pounds and 7,000 pounds capacities, will fill the requirements of any transportation problem. NATIONAL Engineers will be glad to assist you in determining which Truck will best suit your needs.

A Successful Dry Kiln

Here's what a manufacturer of pianos and organs says of a

Sturtevant Kiln:

Trade Mark

"We have two dry-kilns which are operated in this manner, one along side of the other; one in which we place the green lumber that is shipped us, what is usually called shipping dry. This stock is all steamed before the suction fan is placed on it. The other kiln we use for lumber that has been on stick on our yard for from one to two years, and on this we do not apply any steam, simply running it through in about ten days for immediate use. The green lumber, however, in the other kiln is steamed several days and is put through drying apparatus for about three weeks before it is taken out. We have never had any case hardening using this method, neither have we had any warping, in fact, we are perfectly satisfied with the results."

We can quote you dozens of cases where our Kilns are giving excellent service.

Talk it over with one of our drying engineers or get catalog 220-C.

Kendall Gang Circular

The Machine you have been waiting for.

The Machine that will convert your small logs into more and better lumber, quicker than ever before.

The illustration shows the latest design of gang circular patented by Mr. I. N. Kendall, the well-known millwright, of Ottawa. This machine takes 16-26 in. diam., 10 gauge saws—will cut cants up to 8 inches in thickness, and we furnish with it 30 saw collars for any thickness of lumber desired. It has a hollow mandrel, water cooled saws; each saw has a separate guide; easily accessible and readily adjustable, and the bridge tree is so designed that it can be removed, the saws taken off and a new set put on in 10 or 12 minutes. Safety fingers hung just inside the front press roll prevent a cant flying back off the saws. Lumber cut on these machines is guaranteed to come out absolutely true from end to end.

We are the original manufacturers of these Machines

We have been manufacturing them for the past ten years, and the experience gained in those years is at your disposal. We make these machines in three sizes, as follows, using

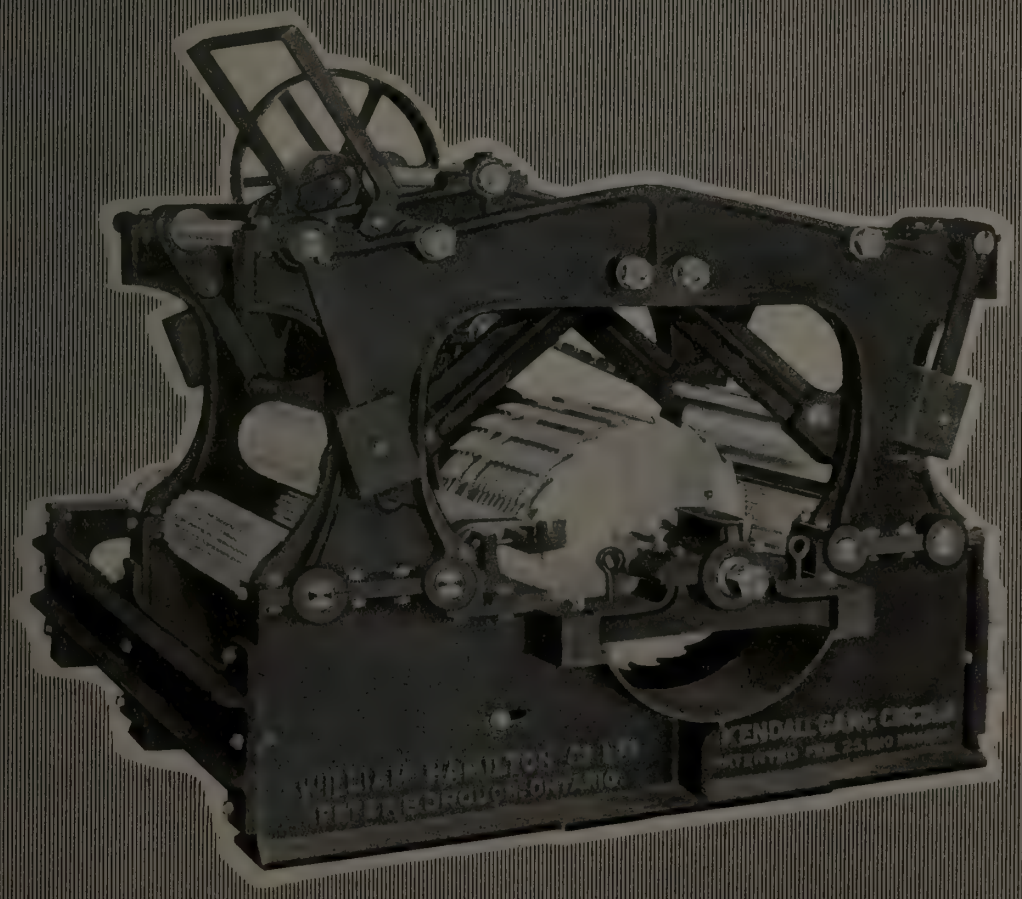
26-in. saws for 8-in. cants, as illustrated.
32-in. saws for 10-in. cants
36-in. saws for 12-in. cants.

May we send you a list of satisfied users?

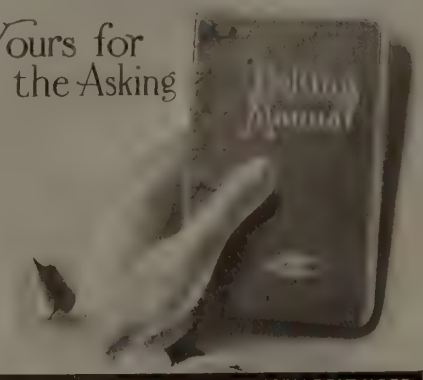
We also make a complete line of twin circulars with chain or steam feed for slabbing logs for these machines.

William Hamilton Co., Limited

PETERBORO, ONTARIO



Yours for the Asking



SHOULD BE IN THE HAND OF EVERY BELT USER

The "Belting Manual" gives in a nut-shell all the information you need about Belt Transmission.
It gets right down to rock bottom principles—every one of its 96 pages is a veritable nugget of invaluable information, suggestions and mechanical rules, tables etc.
In fact the "Belting Manual" is the most complete and authentic book of its kind—a book you cannot afford to be without. You will want to use it every day. Just one little hint may save you hundreds of dollars. Worth while?

Send for a copy and keep it handy for immediate reference.

LOGGING LOCOMOTIVES

The designs of our Logging locomotives are the result of wide experience, extending over a period of 80 years.

The material used in their construction is thoroughly tested and is the best of its kind.

All details are accurately finished to standard gauges and are absolutely interchangeable on all locomotives of the same class and size.

This cuts out long delays at critical times of the work, as parts liable to wear can be kept on hand or shipped promptly from our works.

ATKINS

INSERTED TOOTH SAWS, BITS and HOLDERS are reducing the expenses and increasing the output in thousands of Canadian Mills. The excellence of STERLING STEEL and our improved methods of manufacture make this possible.

Write for our free book "C. L." It gives details about our entire line of Saws for all purposes. Let your next order for Saws specify ATKINS. We'll make good.

A Salesman

at

$2.00 a year

provided he was bright, energetic, up-to-date and a business-getter above the ordinary, would be a decided acquisition to your sales staff, would he not? And cheap too? And you would be mighty glad to enlist his services?

Well, listen!

While we cannot procure you a salesman of this type at such small remuneration, we can provide you with a sales-getter which answers fully to the above description.

The Contract Record
& Engineering Review

is incontestably the most progressive, up-to-date and influential paper in its field. The "Contracts Department" will augment the efforts of your selling organization by keeping them well posted on constructional work, proposed and in progress, while the "Tender" ads. frequently call for bids on lumber, timber and interior finish.

Manufacturers of structural timbers, lumber, shingles, doors, flooring and interior finish, who wish to sell to architects, engineers or contractors, should tell about their products through the advertising pages of this publication.

Subscription price
$2.00 a year.

Specimen copy will be sent on request.

The Machines That Make Plymouth

Necessity is indeed the mother of invention. Plymouth standards, for example, have demanded and inspired better cordage machinery.

Our spinning requirement is a yarn of uniform size and strength. No machine on the market would give this result so we designed and perfected one which would.

Today it takes nine large spinning rooms to house our equipment on this machine alone—the only type of spinner we use.

Similar high standards govern every other department in our mills. And in every one the particular problem in hand has been solved with equal success.

The means to this end has been a permanent engineering staff of our own, which designs, perfects and assembles all the special devices and special machines that these standards call for.

The result is an all-round equipment, which for size, completeness and capacity to turn out cordage of superior quality cannot be matched.

Steel Saw Carriage

The illustration shows our 3-block standard steel saw-mill carriage, the knees of which recede 44" from saw line. This carriage can be furnished in any number of head blocks or axles, also equipped with steam set works attached to either our No. 3 or No. 4 set.

The carriage is carefully designed throughout and is giving excellent service in mills all over Canada.

When you overhaul your mill

don't waste money on extensive repairs to machines whose days are done. You will save money both in your operating costs and in the improved quality of your lumber if you install new "Long saw mill machinery.

Let us talk to you before you start to overhaul

The E. Long Manufacturing

Company, Limited

Orillia - Ontario

Throw Out Those Old Valves!!

Don't tolerate kicking or leaking valves on your Steam Feed. Just as sure as your valves kick, your cutting capacity is going to take a drop. The Sawyer "feels" his work through his lever. A kicking valve scares him off his work; a leaking valve won't let him do his best. Both kinds are money losers for you.

WATEROUS VERTICAL STEAM FEED VALVES

Will neither kick nor leak.

In the first place, the vertical position of this new valve allows perfect drainage into the exhaust port at the bottom. Should the connection break the valve drops of its own weight and shuts off the steam. That's a ***safety*** feature.

Then, the exhaust—mostly water—doesn't pass through the valve plug, but through the lower part of the valve chest. That's why the valve ***cannot kick.***

And—most important of all—with the vertical valve there is no weight on the valve seat and consequently ***no wear*** and ***no leakage.*** It's a ***real*** steam conserver.

Further, the **Waterous Vertical Valve** is balanced to work easy, there is no dead steam between it and the cylinder. Just as soon as the sawyer moves his lever he gets the full "punch" of the live steam on his piston. That makes a ***fast, quick-acting, satisfactory feed.***

If yours isn't that kind now, attach **Waterous Vertica Valves** and see what a difference they will make.

"FROST KING" METAL

$5,000,000.00
worth of mixed metal sold annually.

Our thirty-five years experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. **Price 30c per lb.**, Fort William and East; West of Fort William **35c per lb.**, delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our FAULTLESS BABBITT will stand where all other metals will fail. Price, Fort William and East, **40c per lb.**; West of Fort William, **45c**, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

FOR SALE: Machinery and Timber

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the town of Parry Sound, Ont.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Special bargains in the townships of Burpee, Falconbridge and Street for small mills.

We have the following Sawmill Machinery for sale:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

All of the above open for inspection at Parry Sound.

The Parry Sound Lumber Co., Limited, 26 Ernest Ave. Toronto, Can.

Our Yards are Unequalled for Drying Lumber

To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

Saranac Lake, New York

ARKANSAS SOFT PINE
TRADE MARK
SATIN-LINE
INTERIOR TRIM

Presumably

What you dealers have always wanted is a lumber which will lift you out of the turmoil of price competition, and place you and your merchandising methods on a higher level.

You would naturally prefer to be known as the merchant who sells a material of established value, for which you charge a fair and deserved profit, and in consideration of which you deliver value received to the purchaser.

Arkansas Soft Pine

will help you to this position

WHY?

Because it is a wood of specific superiority for particular uses and as such is nationally advertised. It is, moreover, identified by trade mark, which implies that it must adhere to set standards of excellence in quality and manufacture:

The foregoing facts are in the consumer's mind when he comes into your office. Consequently, when he (your buyer) asks for Arkansas Soft Pine he does so because he knows what it is and because it is the wood he wants. Price is a secondary consideration.

Shall we quote by wire or letter?

All stock bearing the Arkansas Soft Pine Trade Mark is manufactured and sold exclusively by the following companies:

Southern Lumber Company, Warren, Ark.
Stout Lumber Company, Thornton, Ark.
Valley Lumber Company, Reader, Ark.
Wisconsin & Arkansas Lumber Company, Malvern, Ark.
Arkansas Land & Lumber Company, Malvern, Ark.
Arkansas Lumber Company, Warren, Ark.
Cotton Belt Lumber Company, Bearden, Ark.
Crossett Lumber Company, Crossett, Ark.
Eagle Lumber Company, Eagle Mills, Ark.
Edgar Lumber Company, Wesson, Ark.
Freeman-Smith Lumber Company, Millville, Ark.
Fordyce Lumber Company, Fordyce, Ark.
Gates Lumber Company, Wilmar, Ark.

To secure quotations with the least delay, price inquiries should be sent direct to any of the above companies. Literature, samples and information will be supplied promptly on request, by the

ARKANSAS SOFT PINE BUREAU

It Takes Mighty Good Chain to Give the Service you Demand

Few conditions are so severe—or will so thoroughly test the real worth of chain as logging and conveyor work.

AJAX Loading Chain

has successfully met every condition and test—it has been pronounced by ninety per cent. of all the lumbermen in the country as being the best—they use it.

If you are still in the minority—one of the ten per cent.—won't you try to prove this for yourself? Try it once—you'll buy it always.

PACKARD CHAINLESS TRUCKS
Save Your Customers the Useless Cost of Idle Building Crews

BY their swiftness and capacity Packard trucks get the material to the building site at the time ordered. They eliminate hold-ups due to faulty transportation between lumber dealer and buyer.

They can be depended upon in the emergency, and bring more business by better service under all conditions. They open up territory now inaccessible—the suburbs, neighboring towns, the country—anywhere building operations are started.

Packard Chainless Trucks are built in seven sizes, 1 to 6½ tons capacity,—a practical carrier for every purpose and for any load.

All sizes are uniform in design, with optional frame lengths and speeds to suit the work for which they are chosen. Any size chassis may be fitted with any type body.

The principles of hauling efficiency learned in ten years' study of actual service conditions and Packard standards of design, material and workmanship are embodied in all sizes.

The following Canadian firms and 91 other lumbermen and dealers are using a total of 142 Packard trucks.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year in advance; other foreign countries embraced in the General Postal Union, $3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N. Y., under the Act of Congress of March 3, 1879.

Vol. 36 Toronto, March 1, 1916 No. 5

One Year's Experience With Workmen's Compensation Act

We have devoted a considerable amount of space in this issue to reproducing the opinions of lumber manufacturers in Ontario in regard to the Workmen's Compensation Act. This Act has now been in operation for over a year, and although a year can scarcely be considered sufficient for forming a definite judgment as to the merits or faults of any new scheme, it does furnish a basis upon which to consider and discuss some of its details. We do not present the correspondence upon this matter with any idea of opposing the general plan of the Workmen's Compensation Act. We are pleased, in fact, to see how many of the manufacturers in Ontario approve heartily of the plan and offer freely their suggestions for making it more satisfactory in its working out. We had thought at first of publishing simply a digest of the opinions represented in the various letters received, but have come to the conclusion that the best way to lay the matter before all parties who are interested, including the Compensation Board and the manufacturers themselves is to publish the opinions we have received in considerable detail.

The perusal of these letters will show that the most frequent criticism offered is in connection with the rates charged by the Compensation Board, many manufacturers asserting that the rates are far in excess of the previous cost of insurance and many times greater than the amount of indemnity paid in connection with accidents. This is a fault which is admitted to have been unavoidable in connection with the first year's operation of the Act. Nearly all our correspondents are looking forward to the natural remedy of this fault in the form of a reduction in the rates and rearrangement of some of the groups. With these alterations they would approve of the Act fully, as the belief is general that the Workmen's Compensation Act involves an important advance in insurance against accidents.

There are several other criticisms which appear frequently in the different letters we have received. A number of manufacturers, for instance, refer to the tendency which the Act is developing among certain classes of employees to take advantage of it. This is one of the unfortunate tendencies in human nature and is something which no doubt the Board in charge of the working out of the Act must fully appreciate. It should not be difficult in the course of a few years to reduce this objection to as small proportions as it had in connection with insurance by means of employers' liability companies.

Some manufacturers criticize the Act on the ground that it is too wide in its scope, saying that it makes it necessary for a company to insure men whose occupation is only remotely connected with their business, while others find that it is not elastic enough in some cases, not providing indemnity in the case of certain dependents who unquestionably need and deserve it. A somewhat similar suggestion is made by one manufacturer who reports that a conscientious employee who endeavored to return to his work before the seven days limit was up, and subsequently found that he could not stick to the job, could not collect any indemnity from the Board. There must be ways of overcoming such objections by extending the authority of the Board and making the provisions of the Act a little more elastic.

It is noticeable that in the large majority of cases, the criticisms offered refer to the details of the Act and their working out. As to its principle there is very little complaint. In fact nearly all the manufacturers are pleased with the Act in principle, being glad to be relieved of the legal troubles which were involved under the old system of insurance with employers' liability companies. They find, moreover, that the employees themselves are far better pleased than they were formerly and that it is possible to develop a more personal and businesslike relationship between employers and employees than was formerly the case.

Inter-Insurance for Canadian Lumbermen

Insurance problems have always been more or less of a bugbear to lumbermen in Canada. In the United States also, the same is true, but the growth of lumber mutual companies and the recent development of inter-insurance associations has given much relief across the line. The mutuals have extended their operations into Canada to a great extent and have shown our lumbermen that it is not always necessary to pay high premiums in order to get good insurance. The inter-insurance associations go even a step further and show that in addition to giving insurance at cost it is possible to eliminate some of the former elements of cost and automatically to return to the policy holders the whole of the surplus of receipts after losses and expenses have been provided for. The principle of inter-insurance, when brought down to its elementry details, is that the losses are distributed over the premiums and the surplus is returned to the policy holders. To make such a proposition attractive it is necessary to exercise great care in the selection of risks and to establish a rigid inspection service, so as to reduce losses to a minimum.

This is what is being done by the Canadian Lumbermen's Insurance Exchange, which has developed out of the interest taken in the problem by the Canadian Lumbermen's Association and others including prominent members of the lumber trade in Toronto. It is gratifying to report that Canadian lumbermen, after looking into this proposition have been quick to realize its benefits and to give it their support. It was necessary, in the first place, to raise $20,000 for a deposit with the Government. This has been done already. The lumbermen of Ottawa and Toronto having been largely instrumental in subscribing this amount. The Association is therefore assured of an early start. In fact we understand that it is commencing business with quite a fair amount of insurance on its books.

The Lumbermen's Fire Indemnity Contract, which preceded the present Association was established in Canada a year ago by United States interests who made the necessary Government deposit and who are now retiring so as to permit of the Association being converted into a purely Canadian one. The American company had already placed upon its books some one and a half million dollars worth of insurance which brings in premiums of about $35,000. The exper-

ience of the past year was encouraging. There were no losses. On account of its comparative smallness, however, the company was obliged to reinsure all its risks and to pay practically the same rate as it received in premiums, yet it was able to pay all expenses and to show a profit of about 15 per cent. to policy holders. This year as the volume of business grows it is expected that the Association will be able to carry some of its own risks and thus effect a saving in the cost of operation, so that a larger percentage of profit to policy holders will be possible.

When this subject came up for consideration before the Lumbermen's Section of the Toronto Board of Trade an interesting discussion took place. Mr. E. D. Hardy who explained the proposition before the Section was followed by Mr. J. L. Campbell, who, at the request of the chairman told of the experience of the retail lumbermen in the Prairie Provinces. In this case a similar plan had worked out with great success. The rate charged for insurance had been greatly reduced and the Association had been able to pile up a continually increasing surplus. Mr. Campbell, however, differed from Mr. Hardy as to the working out of the plan, being of the opinion that it should be confined to separate classes of lumbermen, that is to say, that the retailers and the manufacturers should not be classed together. He thought that the retail risks were much better than the manufacturing ones and that if all were classed together the retailers would be carrying an unfair share of the premium burden. He did not believe that the plan would work out as successfully as it should, unless the different sections of the lumber business were separated.

Mr. Hardy in reply to Mr. Campbell's point expressed a belief that it would be possible to work the plan successfully with all classes of lumbermen in it. He did not see that any injustice could be done so long as the rates were made proportionate to the risks and the profits were divided according to the premiums. There was no inequality that could not be met by graduating the risks.

We commend the plan of inter-insurance as it appears to us today most heartily to lumbermen. It contains, we believe, the germ of a great improvement to insurance methods from the lumbermen's point of view. It makes it possible to eliminate entirely the conflagration hazard, from which lumber yards and plants in most cases are isolated. It will enable lumbermen to reduce greatly the cost of insuring their properties. It will encourage the improvement of risks, it will give the lumberman who has a good risk the means of getting the most advantageous rate possible and it will in this way, we think, lead to the carrying of much more insurance, at the same time reducing the difficulties of adjusting losses.

Great Britain's Proposed Prohibition of Imports

One of the most important events which have recently occurred in connection with the export trade in wood goods to Great Britain was the recent announcement in the British House of Commons that certain imports would shortly be prohibited, among other articles being many lines of building materials. The object of the prohibition, as announced, is to ease the freight market, and as timber is the most bulky of the building materials imported into Great Britain it is only reasonable to conclude that this is one of the chief articles referred to. The Timber Trades Journal of London, England, in a recent issue, commenting upon the announcement says in part:—An announcement of this sort without details has naturally caused a suspension of negotiations in many cases, and importers are waiting for some clue as to what the prohibition really means—whether it is to be partial, whether import will be permitted under licence, etc., etc. They are also asking themselves the elementary question, What wood is building material and what is not? Nearly all wood can be used for building and nearly all wood for other purposes, and who is to decide the debatable points? The attitude of the trade, on the whole, is very calm, and until more particulars are available there is no disposition to worry about the future. For it must be remembered that for more than a year past a large proportion of the softwood imported into this country has ben directly or indirectly in connection with Government orders, the building trade being more or less a negligible factor except building for the Government.

The timber trade is as anxious as any section of the community to make sacrifices necessary for the general good, and will, of course, submit cheerfully to any prohibition by the Government, especially at a time when the Government is the chief customer. According to most estimates, from 70 to 80 per cent. of the timber trade is for Government work, while the outside business tends to diminish in proportion as prices rise, speculative builders having no use for 2 in. x 4 in. at from £25 to £30 per standard. But the situation is nevertheless puzzling. If the Government consumption of wood is to continue (and there are few signs of much diminution as yet), how can there be a prohibition of import unless the Government intends to take the whole of the trade into its own hands. Has it not enough on its hands already? If wood must be brought in, and the current prices clearly show how much it is needed, is it not better to leave the business in the hands of firms accustomed to the work who must be more fitted to transact it than Government officials? Whilst the primary object of the suggestion may be to economise tonnage, a secondary one is probably an idea to arrest the import of such goods that may be termed luxuries, and so lessen the burden of exchange. As yet, however, the suggested change is only in contemplation. It may be passed into law with reservations, one of which may exclude woods from our Colonial possessions, but the proposals are fraught with a large amount of interest not only to the importers but to the consumer and others.

Since the publication of the above article a royal proclamation has been issued prohibiting the import, after March 1, except under Board of Trade license, among other articles the following: "All materials for the manufacture of paper, strawboard, pasteboard, millboard and wood pulp, board, and manufacturers of paper and cardboard; furniture woods, hardwoods and veneers.

Australian Market for Our Timber

We have made frequent reference in these columns to the importance of the Australian market for Canadian lumber and timber. We believe that manufacturers and shipping firms in British Columbia, as well as brokers and merchants in Australia, are all anxious to improve trade relations in this regard and to work up a more extensive business. Probably the keynote of the whole situation is reciprocal trade. Canadians cannot expect to send many cargoes of lumber or any other products to Australia unless return cargoes can be arranged of Australian goods required in Canada. We publish elsewhere in this issue an interesting letter from Geo. Hudson & Son, Limited, of Sydney, N. S. W., in which they state that they have come to the conclusion that a reciprocal tariff must be introduced in order to increase our exchange of products. One of the practical points made by the writer of this letter is his claim that British Columbia mills should deal direct with the timber merchants in Australia and quote c.i.f. prices. Under present conditions the trade goes through the hands of Australian importers who buy at Canadian mills on an f.o.b. price and make arrangements for the tonnage. Any plan to sell on a c.i.f. basis would, of course, make it necessary for Canadian manufacturers to secure the tonnage of their shipments. The handling of this trade by means of f.o.b. sales to importers in Australia simplifies the business greatly for the Canadian mills. It is an open question, however, whether the Canadian mills would not be better off if they followed the advice of Geo. Hudson and Son, and got in touch with merchants in Australia.

Of course, to a great extent, this matter of quoting on a c.i.f. or an f.o.b. basis is really only one aspect of the larger problem of securing or controlling sufficient shipping to handle the B. C. exports of

timber and lumber. In this connection it is interesting to note the opinion of Mr. Niel Nielsen, Trade Commissioner for Australia, whose headquarters are at San Francisco. Mr. Nielsen visited Vancouver recently and expressed himself as follows:—"It seems to me that the only way the B. C. lumbermen could compete with United States lumbermen would be either by the absolute control of a fair proportion of the shipping they require or by a preference in the customs." It will be seen that Mr. Nielsen's analysis of the situation comes down practically to the analysis we have outlined above. Mr. Nielsen is advocating and working for the adoption of a reciprocal tariff. A trade agreement could be made, he says, whereby B. C. and Canadian products generally could be sold in Australia at a low duty, and such products as meat, butter, etc., which Australia could supply to Canada, would have a similar light duty, or no duty at all, whatever the arrangement might be. Dealing with the subject more in detail Mr. Nielsen brought out the following points:—

There now exists no reciprocal agreement between Canada and Australia, but there does exist such an agreement between Canada and New Zealand. Australia would want no better terms than those arranged with New Zealand. And, furthermore, such an agreement between his Government and Canada would be of greater advantage to British Columbia than the New Zealand reciprocal agreement, for the reason that Australia imports a great amount of lumber while New Zealand uses her own lumber.

While British Columbia lumber is not getting into the Australian market, that country annually buys through Mr. Nielsen's office some 20,000,000 feet. If a customs agreement were arranged between the two dominions, Australia would open a trade office in Canada similar to the office in San Francisco. Four years ago, when he established the office in San Francisco, the business Australia was doing there amounted to only about $600,000, and in 1915 it was approximately $9,000,000. Not only can Australia compete with New Zealand, her neighbor, in meats and butter, but also there would be a good market in Canada for her wines in competition with California wines.

Mr. Nielsen has made an effort to show preference to this country and has recommended to his Government that he be allowed to give British Columbia lumber a ten per cent. advantage. This his Government allowed, and yet he found that even with this advantage over Puget Sound and Columbia River, the lumber in B. C. could not compete, for the reason that there were no ships owned in Canada, and American ships would not come here unless paid extra, the prevailing extra rate being some five shillings per thousand feet.

Shipowners give two reasons for asking a higher freight rate to come to British Columbia. One is that they have greater port and tonnage dues to pay, and the other is that British Columbia lumber is heavier and lowers the carrying capacity of the ships. They claim that a ship carrying a million feet of Puget Sound lumber loses 50,000 to 60,000 feet in the extra weight of lumber loaded here.

Editorial Short Lengths for Busy Readers

The Gloucester Fishing Schooner, Elmer E. Gray, of only 84 tons register, was recently in port at St. John, N. B., taking on a cargo of lumber for the Geo. McKeen Lumber Company, for delivery at a trans-Atlantic port. The master of the vessel expects to make the voyage across in about three weeks. Her load will be about 85,000 feet.

In its issue of February 1st the Timber Trades Journal of London, England, referring to the situation in connection with Atlantic freight rates says:—"Another week has passed without any fixtures of wood-carriers, either steam or sail, having been reported on the market. The scarcity of suitable tonnage, and more especially of steamers, has shown no sign of any diminution, and the recent exorbitant rates of freight obtainable for other cargoes continue at least to retain their high level, with the Government orders for steam grain carriers attracting the best of the comparatively few boats available. The enquiry for tonnage for next season's deals from Canada does not appear to have been followed by any chartering up to the present, and although the basis of rates quoted by shippers may now be taken to have advanced by 5s. per std. to 225s., so small an increase is not likely to have much effect in inducing owners to fix their boats so far ahead in the current condition of freights generally."

The Department of Trade and Commerce is in receipt of a communication from Mr. H. R. MacMillan, Special Trade Commissioner, stating that the largest firm of timber importers in South Africa import several thousand doors each year from the United States. These doors are nearly all made in New York State, largely from lumber supplied from Canada. Several years ago this company imported Canadian doors which were found to be satisfactory but, during the past few years, their New York agents have been supplying them with American doors. It is possible that there are manufacturers in Canada who are in a position to compete with United States manufacturers both in quality and price.

This firm is willing to take a trial order of a hundred 6-foot 8-inch by 2-foot 8-inch by 1½-inch four panel double moulded No. 3 pine doors, provided that these doors can be shipped before the end of March, for a price of 10s each, c. i. f. Durban. They desire that these doors should be shipped by a reputable manufacturing firm prepared to enter into the export trade. The firm shipping the doors may draw upon the company in question at sight for payment in full. When the shipment is made the South African firm will be glad to receive a statement from the shipper dealing with the possibility of the development of an export trade from Canada in doors, giving information regarding grades, prices, and conditions of shipment. The name of the above-mentioned firm may be obtained on application to the Department of Trade and Commerce, Ottawa. (Refer File No. A-1499.)

The attention of the Department of Trade and Commerce has been drawn to the possibilities of opening up an export trade in Canadian paper and wood-pulp with Brazil by the British Consul General at Rio de Janeiro. Up to the present the trade in these articles, which is sufficiently large, has been almost entirely in the hands of Germany and Norway and is now, naturally, mainly held by the latter. There would now seem to be no reason, provided freight can be obtained, why Canadian manufacturers of printing paper and wood-pulp should not secure a large portion of this trade. The steamship lines, which run regular services from New York to South American ports, would probably be able to take the paper, if the railway freight to New York did not cause the total freight to compare unfavorably with those obtainable from Scandinavian ports.

In the year 1913 Brazil imported 30,052,227 kilos of printing paper to the value of 7,373,137 milreis or £491,542 at 16d. exchange, and in 1914 the imports amounted to 21,007,159 kilos with a value of 5,318,808 milreis, or £332,425 at 15d. exchange, thus allowing for the drop in exchange which took place towards the end of last year.

As regards wood-pulp, Brazil in 1913 imported 6,022,875 kilos to the value of 789,725 milreis or £52,648 at 16d. exchange, and in 1914, 3,455,957 kilos to the value of 472,290 milreis, or £29,518 at 15d. exchange, allowing for the fall as before.

The heavy drop in 1914 is due to the abnormal circumstances and financial stringency caused by the European war, but the opinion is expressed that Canada might well look to Brazil as a promising outlet for the products of her paper industry.

It is only by co-operation that the lumber industry of British Columbia can be placed on a sound financial basis, the logger co-operating with the lumbermen, the banks giving all the convenience possible to this great industry, the Dominion and Provincial Governments rendering all the assistance possible, as when the lumber industry is prospering, it not only adds to the prosperity of the lumberman, but helps in no small way in making British Columbia as a whole prosperous and progressive.

Lumberman's Two Sons Serving the Empire

Flight Sub-Lieut. G. A. Maclean, Royal Naval Air Service.

Lieut. A. P. Maclean, 20th Batt., 2nd Contingent.

The accompanying portraits are of two sons of Mr. W. B. Maclean, president of the Conger Lumber Company, Limited, Confederation Life Building, Toronto, both of whom are on active service, one in the Royal Naval Air Service and the other in Flanders. Flight Sub-Lieut. G. A. Maclean, R. N., was formerly secretary-treasurer of the Conger Lumber Company, Limited. He is the eldest son of Mr. W. B. Maclean, and was connected with the company for five years as manager of the operations at Parry Sound, Ont. He gave up this position in June, 1914, to become an officer of the Eaton Machine Gun Brigade. Shortly after his arrival in England he applied for transfer to the Royal Naval Air Service and secured an appointment about October 1st, 1915. He is now on active service in charge of a sea-plane on one of the war ships in the North Sea. Flight Sub-Lieut. Maclean is 24 years old and is an old Upper Canada College boy.

Lieut. A. P. Maclean, 20th Battalion, 2nd Canadian Contingent, is the second son of Mr. W. B. Maclean. He also was actively interested in the business of the Conger Lumber Company, Limited, at Parry Sound. He is twenty years of age and was born in Toronto. He is a graduate of Upper Canada College and was attending the University of Toronto when the war broke out. He then took a commission with the 48th Highlanders, Toronto, and subsequently was transferred to the 20th Battalion. Lieut. Maclean left Toronto in May, 1915, for overseas. He was in camp at Shorncliffe and left there for the front on September 15th, 1915, since when he has been on the firing line in Flanders. Before the 1st Battalion left Shorncliffe he was promoted to the position of signalling officer of the Battalion.

A Shingle Shortage in British Columbia

Private advices received by the Canada Lumberman from B. C. state that on January 28th, fifteen shingle mills with an aggregate total of 105 machines, reporting as to their stocks and orders on hand, showed the following totals:—

Orders on hand, XXX 17,390,000; XXXX 1,640,000; XXXXX 31,255,000; Eurekas 3,910,000; Perfections 11,450,000.

Stocks on hand ready for shipment XXX 2,714,000; XXXX 1,812,000; XXXXX 5,878,000; Eurekas 200,000; Perfections 345,000.

Surplus orders on hand XXX 14,676,000; XXXX 172,000*; XXXXX 25,377,000; Eurekas 3,710,000; Perfections 11,105,000.

*Stock on hand in excess of orders.

This shows a surplus of orders for 54,686,000 shingles or at 25,000 shingles per machine per day enough business on hand to keep all the mills which reported (105 machines) running to full day time capacity for nearly one month. It is hardly necessary to comment on price considering this report, especially when one takes into consideration the fact there are practically no logs in the loggers' hands.

Further advices which were received subsequently, indicate that this situation was unchanged on February 21st, except for an increased volume of orders. It is interesting to recall in this connection that practically all mills on the Pacific Coast were closed down during much of January and February by heavy snow and severe weather, and that the logging operations were similarly interrupted. The Canadian Western Lumber Company for instance, after a lengthy shut down, started operations again on February 19th, but was only able to do so after employing 500 men shovelling snow about the plant.

A New Wholesaler for Toronto

J. R. Summers, Toronto

The accompanying portrait will be recognized by many of our readers as that of Mr. Jas. R. Summers, who has recently opened a wholesale lumber office in the Tyrrell Bldg., Toronto. Mr. Summers is well known to the trade on account of his long connection with Graves, Bigwood and Company, whom he represented on the road, chiefly in the Toronto city trade.

Mr. Summers has had a lengthy experience in the lumber business. He was born at New Lowell, Ont., then quite an important lumber manufacturing town. His father was in the lumber business at that place with the firm of Hay and Patton. Subsequently his father was with the firm of Dobie and Mercer at Angus, Ont., and Mr. Jas. R. Summers obtained his first experience of the lumber business with this firm, working for them both in the mill and in the yard. He thus became intimately acquainted at an early period in his business career with manufacturing and inspection details.

Subsequently Mr. Summers entered the employ of the Imperial Lumber Company, Toronto, for whom he worked for thirteen years, representing them as a salesman and buyer. Then he was for four years with the Wm. Laking Lumber Company in a similar capacity, after which he went to the firm of Graves, Bigwood and Company, with whom he remained for seven years. During his career as a lumber traveller, Mr. Summers has had experience, not only in the city trade, but also throughout most of Ontario and much of the States of Michigan, Wisconsin and Minnesota. His former employers, the firm of Graves, Bigwood and Company found him a capable and efficient salesman, a fact which will be vouched for also by many of the trade whom he was in the habit of visiting.

Mr. Summers will deal in both hardwoods and soft woods, specializing to a considerable extent in crating and box lumber.

Continued Bad Weather on the Pacific Coast

The situation in connection with logging and manufacturing on the Pacific Coast, during the first half of February, continued very unsatisfactory on account of the severe weather. A letter received from a Vancouver firm under date of February 10th refers to conditions as follows:—

We have had continued storms since the 27th of December and, as far as we know, only three or four mills have been running, out of about forty mills in and around Vancouver. Also, on account of the deep snow, the logging camps have been forced to close down. The result is that there will be very little timber on the market when the mills are ready to operate and our opinion is that there will be very little volume of shingles available for purchase from B. C. mills for several weeks to come, as a number of the mills have orders booked which they have been unable to fill during the past month or more and it will be necessary for them to fill them before they take on new business.

Kiln Drying Refused Stopover Privileges by Railroads

At the weekly meeting of the Lumbermen's Section of the Toronto Board of Trade on February 18th Mr. A. E. Clark reported that he had received a communication from J. R. Eaton & Sons of Orillia, Ont., advising him that the C. P. R. and the G. T. R. were refusing to include kiln-drying as work in transit, and that when cars were stopped for kiln-drying it was necessary to pay the local rate both in and out. Mr. Clark suggested that this might be taken up by the Lumbermen's Section. After considerable discussion the matter was placed in the hands of a committee consisting of Messrs. A. E. Clark, J. B. Reid and H. G. McDermid, who were instructed to interview Mr. Marshall the traffic manager of the Board of Trade and discuss the situation with him.

Mr. Fred McLaren, president of D. K. McLaren, Limited, belting manufacturers, St. James Street, Montreal, is on a visit to Western Canada, going as far as Vancouver. One object is to look into business conditions and to confer with the company's representatives in the west. Mr. McLaren is known to the heads of practically every lumber firm in the East, and he will doubtless make many new friends on his western trip.

St. John Commission Final Report

Canadian and U. S. Members Fail to Agree on Chief Points—Recommendations Presented

St. John, N.B., Feb. 19:—The International Commission pertaining to the St. John River gave out its report for publication today. After citing its instructions, the report deals with the questions of piers, booms and sorting works and shows that the Commissioners have been unable to reach an agreement. It outlines the trouble experienced by the St. John Lumber Company with handling logs on the St. John River. The company, acting under legislative authority from the State of Maine, built and maintained works between Van Buren and Ste. Anne, consisting of piers, booms and sorting works and still maintains them.

The Commissioners, on behalf of the Canadian Government, asserted that such legislation was ultra vires (contrary to law) and that the piers, booms and sorting works so established and maintained are an obstruction to navigation and in violation of the treaty of 1842. The Commissioners, on behalf of the United States, maintained that the said legislation was intra vires (legal) and that the maintenance of piers, booms and sorting works was a reasonable use of the river and not in violation of the said treaty. The United States Commissioners referred to the case of the Blue River Lumber Company on the St. Frances River, a boundary between the two countries. Here the company had erected a sawmill on the Canadian side with a production of 20,000,000 feet annually and had built a dam across the river, constituting an impediment to navigation.

The Commission recommends the development of the water power at Grand Falls, N. B., and urges that legislation be enacted to safeguard the interests of both countries in this connection.

Among other recommendations made by the Commission are that certain channel improvements be made in the St. John River for driving purposes; that legislation be passed prohibiting the dumping of mill waste into the river; that various storage dams be built at the head waters of the St. John River and its tributaries, at the joint expense of the United States and Canada; and that an international board of commissioners consisting of three members be appointed to regulate sorting of intermingled logs, etc. The Canadian Commissioner recommended that the jurisdiction of the present Board over the sorting of logs should be limited to those parts of the rivers which are boundary waters according to the treaty of 1842. The United States Commissioners maintained that the jurisdiction should extend from Fredericton to the head waters, including Fredericton.

The Canadian Commissioners, and Mr. Keegan, one of the Commissioners on behalf of the United States, recommended as follows:—

That if the storage dams for log driving purposes recommended in this report be built, it will not be necessary, to meet the requirements of log driving, to change the conditions now existing at Chamberlain and Telos lakes; but, if such dams are not constructed, that measures be taken to determine, by international agreement, or by obtaining the judgment of some competent tribunal, whether, by prescription or otherwise, the continued diversion of water by means of the Telos canal and dam and the Chamberlain dam is lawful; and, if found to be unlawful, that the said works be taken over by and at the expense of the State of Maine, and operated under the supervision of the said board of commissioners for the joint benefit of the St. John and Penobscot Rivers, giving to each river, so far as may be possible, an equal share of the stored water, as the exigencies of log driving conditions may require, and that the cost of maintainence and operation be borne by the owners of logs in both said rivers in proportion to their respective quantities of logs, or, failing such an arrangement, that the Chamberlain and Telos dams be taken down, the Telos canal closed up, and the waters of the Chamberlain system allowed to run in their natural channel down the Allagash River.

James. D. Lacey and Company's Fine Calendar

A splndid calendar for 1916 has been sent out by James D. Lacey & Company, 332 South Michigan Ave., Chicago, Ill., to their many friends. The make-up of the calendar is a work of art, being probably the most tasteful that we have ever been fortunate enough to receiver. A fine reproduction of a photograph of a forest scene in which the trees are imposing examples of western (Sitka) spruce is the decorative feature of the calendar, being reproduced by a splendid printing process in a rich brown. At the base of one of the huge trees there is shown a "hewer" the most romantic figure in the history of North American forest operations. The contrast between the immensity of the trees and the comparatively diminutive size of the man, is very striking, and tells at a glance the story intended to be conveyed by the picture. The illustration is mounted in a handsome manner, the effect being that of a rich brown frame with a deep olive green border between the picture and the frame and a similar border on the outside edge of the frame. The calendar pad is a small one attached beneath the picture.

Pulp and Paper Men Hold Meeting

Annual Gathering at Montreal—President Reports Sound Trade Conditions—Officers Elected

The annual meeting of the Canadian Pulp and Paper Association was held recently at Montreal, Mr. I. H. Weldon presiding. There was a large attendance from all parts of the country.

In the course of his address, Mr. Weldon said:

"On several occasions we have conferred with the Minister of Finance, Sir Thomas White, and his colleagues, on the matter of tariffs, and as a deputation have furnished him with our views and given him the information which he desired. We have always received the most kindly consideration, and are of the opinion that no adverse tariffs affecting this industry will be consummated without the Department first considering our interests and consulting our judgment.

"With considerable pride I refer to the extremely valuable work which this Association has done in the fight against the proposed increase by the Eastern Freight Association. We obtained from our members the approximate tonnage affected by this increase, and found that the increase would cost our industry $209,000 yearly. The saving to us of such an enormous amount which, in our judgment, was being unfairly exacted, required the putting forth of the most strenuqus effort.

"The pulp and paper industry in Canada during the past year has greatly increased its exports and diminished its imports, and compares most favorably with any of the leading industries in Canada. We are fortunate that this industry has not been affected by the present war, nor is it necessary for us to manufacture war supplies in order to keep our mills engaged. The prospects for the future promise an unlimited sale for our product, both at home and abroad. Our manufacturing costs have increased; the supply of certain materials used in the manufacture of special grades is difficult to obtain, and we will doubtlessly experience most unusual conditions occasioned by the present war, but for the industry on the whole we should entertain no fears for the future with our inestimable wealth of forests and our unlimited water powers, both of which largely represent the basis of the industry."

Mr. A. G. Campion, chairman of the news section, commented upon the improvement in the news print industry. While stocks were low, markets were good, and there was reason to believe that the increased tonnage of just over 200 tons per day which would come on to the market during the year would be readily marketed.

The report of the secretary treasurer showed a favorable balance.

Mr. J. H. A. Acer of the Laurentide Company was elected president. and Mr. C. Howard Smith, vice-president.

After the termination of the business meeting the various sections held their meetings, at which the following chairmen were elected: chemical pulp, Mr. Carl Riordon, Riordon Pulp & Paper Company, Montreal; mechanical pulp, Mr. J. A. Bothwell, Brompton Pulp and Paper Co., East Angus, P. Q.; news, Mr. A. G. Campion, Belgo-Canadian Pulp & Paper Co., Montreal; board, Mr. J. F. Taylor, E. B. Eddy Co., Hull, P. Q.; book and writing, Mr. I. H. Weldon, Provincial Paper Mills Co. Ltd., Toronto; felt paper, Mr. E. R. Pepin, Montreal Paper Co., Portneuf, P. Q.; coated paper, Mr. F. H. Gage, Kinleith Paper Co., Toronto.

After a visit to the experimental paper mill at the Forests Products Laboratories of Canada, the members again met, when Mr. A. G. Pounsford, of the Canadian Fibre Co., Canton, North Carolina, delivered an address upon safety work, illustrated by moving pictures.

In the evening the members held their annual dinner, with Mr. Acer presiding.

Mr. C. H. L. Jones, of the Spanish River Pulp and Paper Mills, spoke.

Hon. Jules Allard, Minister of Lands and Forests, Quebec, P. Q., is preparing a bill to be introduced in the Legislature which will amend the Quebec forest laws and provide further protection for forests against fire. The amendments under consideration will prohibit settlers from clearing timber in summer months without a permit from a Government forest ranger; will require limit holders to clear trees for a distance of at least 100 feet on each side of railway tracks, and will provide that persons between 19 and 50 years of age may be called on to assist Government officials in fighting forest fires if their services are needed and they have no valid reason for refusing. Their payment will be from $1.50 to $2 a day.

The Wilson Lumber Company, Portland, Me., have sent out to their friends in the trade an attractive calendar for 1915. The make up of the calendar is very artistic, consisting of a handsome colored photograph of a scene in the woods. entitled "The Edge of the Lake," the picture being mounted on a cream board with a couple of soft tinted borders.

Workmen's Compensation in Ontario

Reports from Employers in Lumber Industry—Premiums Much Too High—Some Regrouping Advisable—Act Widely Approved

The Ontario Workmen's Compensation Act has now been in operation for a little over a year. One year is not a sufficient length of time for judging the merits or faults of so important a change in insurance methods against accident liability, but it is a sufficient length of time in which to form an idea as to the working out of some of its main points and to derive guidance from them for the future administration of the act. With this object in view we recently wrote to a number of Ontario lumber manufacturers asking them to let us have an account of their experiences under the act. Extracts from some of the replies we received are as follows:—

Too Wide in Scope—Good Points and Bad

Our chief objection to the Act is that the system of calculating the assessments is unfair, as we are obliged to include in our returns the wages paid to almost everyone who is even remotely connected with our operations, whether exposed to hazard or not. In this connection, we might mention the cooks and stable-men employed at our camps, and the crews of our tugboats. We are also compelled to include the wages of fire-rangers, whose duties are to patrol the forest, to watch for and extinguish fires, but who are miles away from our actual operations. In fact, office clerks are practically the only employees whose wages are exempt.

Then again, in our opinion, the provision made for the dependents of a workman who loses his life ought to be somewhat more elastic, so as to cover special cases. We give, as an instance, the case of one of our employees who was killed at our mills last spring. This man's family were all grown up, but he left behind him two unmarried daughters who were certainly dependent upon their father for support; yet because they were over the age limit for dependent children, the Board could make no compensation allowance whatever.

During the season just closed, we believe we had a larger number of accidents than in any year of our history, yet the total amount paid by the Board to injured employees was approximately $780.00, whereas the amount of premium paid by us was $4,740.00.

There is no doubt that the Act is, to a certain extent, beneficial to both employer and employee. To the latter, it ensures generous (though in some instances, we feel, too generous) treatment, in case of partial or total disability. On the other hand, the employer is saved the necessity of making settlements with injured employees, which often involve litigation owing to the unjust nature of the latter's demands. Our experience has been, however, that we can purchase this immunity, from one of the various employers' liability companies at only a very small fraction of what it now costs us under the Workmen's Compensation Act.

* * *

Premium Rate Far Too High

While we have found the officers of the Compensation Board uniformly courteous, we feel that the amount and rates exacted, at any rate from the smaller concerns, have been unfairly large, and, judging by our experience, much greater than was necessary to meet the claims. The amount originally demanded from us was $455. We protested against this assessment, which was between three and four times what we estimated it should be. After considerable correspondence, we were surprised to receive a letter from one of the higher officials intimating that, (long after the assessment on us was made), the matter was only then drawn to his attention for the first time. From this it would appear that the important matter of the assessment made by some member of the clerical staff. We made the first payment as permitted under the Act, and protested against any further demand being made on this account. The official also said that this might be doing us an injustice. In checking up the total wages for the year, we find that even the amount paid in is about $35.00 more than the class percentages of the pay rolls call for. Owing to the demoralization of the lumber trade for the past year or more it has been next to impossible to make as close an estimate of the pay roll as might be done under normal conditions.

So far as accidents are concerned, there was only one minor accident, which occurred in our shingle mill, due to the admitted carelessness of the employee, who suffered a slight flesh wound from putting his hand on the shingle saw, in consequence of which he was laid off for seven or eight days.

So far as actual results are concerned, we have paid in $227.50, and the actual amount paid out by the Board on this account was between $4.00 and $5.00. So far as the assessment on us is concerned, we have had to pay in to the Board more than fifty times what claims have amounted to.

Under the old system of insurance against accidents, with Employers' Liability Companies, the amount of the premiums was less than half what we have had to pay in to the Workmen's Compensation Board. Judging from the Factory Inspection Report, 1914, it seems to us that the smaller concerns are actually paying much more in proportion to their accident claims than is being paid by the larger corporations, who appear to have the greater percentage of accidents. So far as we are concerned, we feel that an injustice has been done us, and a much larger amount exacted than the past year's experience gives any warrant for. We understand that it is not the intention of the Board to afford any relief from this, even to the extent of applying the excess amounts collected in 1915 on 1916 account. The very depressed condition of the lumber market during the past year or more, has made it hard enough for the average lumber concern to carry on business, without having to bear this additional burden.

* * *

Burden Shifted—Rates Too High

When it is considered that the intention of this Act was primarily to give protection and compensation to employees for injury, sickness or death, resulting from the hazards of their occupation, without the expense, delay and uncertainty of recourse to the courts, it must be conceded that its working during the first year has proven on the whole, satisfactory, particularly so to the employees who received the benefits without being called upon to contribute anything towards the funds necessary for its successful operating.

As the provisions of this Act become more generally known, there will be found a strong tendency on the part of slackers and ne'er-do-wells to take advantage of those provisions in the Act relating to sickness. Injuries and death are self-evident, but sickness and internal complaints are too open to be taken advantage of, and it is to be regretted that many physicians allow their sympathy for, or desire to stand in with the claimant or his class, to bias their judgment in signing certificates.

We believe the two per cent. fixed upon for logging operations is altogether too high, as our experience of more than twenty years—and we believe that this will be found general—is, that there is a smaller percentage of sickness, accident or death in this, than any other branch of the lumbering business. This percentage will no doubt be adjusted during the present year, on the basis of the first year's actual experience.

Our premium for last year was $1,173.60, which will be increased slightly through the estimated pay rolls being somewhat less than the actual, while the total indemnities collected were less than $500, principally trivial accidents and sickness.

There can be no comparison of cost as, previous to the coming in force of this act, a general accident insurance policy was carried by which every man on the payroll was charged $1.00 per month, which the company collected and transmitted to the insurance company in return for which a blanket policy providing indemnities in case of sickness, injury, or accidental death, according to schedule, was issued.

The premium collected under the Workmen's Compensation Act is thus a direct tax levied on the business.

* * *

No Complaints To Make

We have, to a certain extent, been fortunate regarding accidents here, and they have caused us no great expense during past years. When the Compensation Act was first brought to our attention we were opposed to it and wrote to our local member and also to the head office, and when we were called upon for our assessment we thought it a little high. This we understand was the case in most instances. At the present time we do not know what it cost us last year, as we have not as yet received credit or a call for 1917 assessment.

We had a little experience last year with this Act. A young man had been with us about ten days when he cut the top of his thumb on the jointer. This laid him off a month and he received $8.00 a week for five weeks and later received a cheque for $82.00. He may have received more as we understood at the time that they intended granting him another cheque. We wrote them that we were of the opinion that, considering the nature of the accident and the circumstances, they were very liberal in their views.

Our view of the matter is that to some extent the smaller manufacturers will help the larger concerns. Taking our own business, it cost us only what we considered right to grant compensation to anyone meeting with an accident in our employ, previous to last year; but after a year's operation of the act and trusting to receive a rebate on last year's assessment, we have no complaint to make.

There is a little matter we have to contend with since this act came in force, previous to the act we had only to protect what machinery the factory inspector might see fit to order, and his inspection was of good character, but now we have an inspection by the association formed by the owners of some of the mills and this inspection has been accepted and backed by the Com-

pensation Board. We think the above is not called for in the least, as factory inspectors are quite competent to judge what is required by the Factory Act.

* * *

Working Satisfactorily But Rate Considered Excessive

So far, our experience has been that the Workmen's Compensation Act has worked out satisfactorily, insofar as taking care of the men is concerned. There seems to have been no undue delay in dealing with any case that has come to our notice and we feel that it is the proper way to take care of injuries to workmen. The rate, however, seems to be entirely excessive. We are aware that the original assessment was only provisional and in all probability the commissioners had no very clear data to work from, but looking at the matter from our standpoint, it would seem to us that the cost of the compensation has been very much greater than the returns to the injured men. This, however, will in all probability be rectified as experience in the working of the Act develops. There are so many things to be considered in connection with this question that it is difficult for anyone to get a very clear opinion as to the merits or demerits of any particular principle until it has been tested out thoroughly. One of the things that will have to be particularly guarded against by the employers of labor and the commission, is the tendency to imposition that any law of this kind appears to develop on the part of the benificiaries. We are constantly brought face to face with cases where men with apparent deliberation endeavor to take advantage both of the Compensation Act and the Ontario Medical Act as it applies to men in camp.

* * *

The Workmen's Compensation Act has hardly been in force long enough for us to pass a definite opinion as to its success. So far as claims made by workmen are concerned, we think they have been treated very liberally but the cost to us has been very high. We do not think, on the whole, that the workmen have any better satisfaction than when they were insured under the Employer's Liability Insurance.

The cost to us so far has been 1.80 as against 1 per cent.

We think ourselves, that before the manufacturers either praise or condemn the Act, they should give it another year's trial. By then we should know definitely what our assessment was going to be.

Following are the particulars that we have in so far, of the amounts paid out by the Compensation Board, at our Chatham and Sundridge mills, and Chatham Cooper shop:

	Premium	Paid Out
Mill No. 1	$270.00	$137.73
Mill No. 2	180.00	21.08
Cooper Shop	72.00	.....
	$522.00	$158.81

There was nothing paid out at the cooper shop. You will notice we have paid out $522 premium, and the Board paid out to our men $158.81.

* * *

Previous to the enactment of the Workmen's Compensation Act, we never had liability insurance on our woods operation, so we can give you no data as to the relative cost in comparison with that under the Compensation Act. We did, however, carry liability insurance on our sawmill employees, and we carried this at about half the rate that we paid the Compensation Board. We are unable to give you the amount collected by injured employees from this office.

* * *

We do not care to express our views very strongly regarding the Workmen's Compensation Act, until we see whether the Board are going to make any reduction in the rates, and might say that under the present rates we are paying considerably more than we formally did.

We had no accidents last year, so cannot judge this act in respect to the claims paid employees.

* * *

We paid to the Workmen's Compensation Board for 1915 $1,111.42, this amount being based on wages paid the previous year, and the amount returned to our men for two accidents was $27.04. The amount which we paid before the act came into force would be somewhere in the neighborhood of $75.

From this we take it that we have been taxed very much more than we should have been, and it will be interesting to see the reports of other firms along these lines.

We are well aware that, in many places, too many accidents take place, but where ordinary precautions are taken we think they should be cut down considerably, and hope to see a great improvement along these lines.

Owing to the war the amount which we paid is more than it should have been, and we suppose this will be adjusted before another payment is called for.

* * *

We paid the Workmen's Compensation Board $330 a year ago, but there is approximately $18 credit for 1916. We had two workmen injured, one losing a finger, and the other being knocked off a ladder. The former received $161.21, being off nearly three months, and the latter, so far has received $154.86 but he is now drawing only part of his former wages.

The general idea of compensation is good, since it does away with a great deal of friction between the employer and the men who now understand there is a law to protect them. On the other hand the rate is entirely too high when you consider the rates charged by companies in the past, which paid for injuries, I believe, more than the present rates. Formerly there were a good many companies to stand these losses whereas now there is only one which is a safer proposition.

The cost to us at present is greater than in former years when we partly took our own risk and also partly insured.

* * *

Compensation Too Generous Sometimes

In our judgment, the assessments are higher than are necessary. For 1915 we paid $1,322 while the Board paid out to injured employees and dependants a little over $300, or in other words our payment exceeded by about $1,000 what was paid out to workingmen and dependents.

Scarcely any of the small accidents which occurred were such that we would have been liable, as in the majority of cases injuries were sustained as a result of carelessness on the part of employees. We do not think our total payments for twenty-five years preceding the act going into force amounted to as much as was paid out by the board for 1915 on our account.

In some cases compensation paid is in excess of what it should be, for instance we had one boy 14 years of age employed in our picket mill at $1.25 per day, two days before the mill closed he had his hand cut on a saw. Had this not occurred he would have received $2.50 in wages and we understand intended going to school when the mill closed. The Board paid him $18.31.

* * *

Now Costing Six Times More Than Formerly

We paid the Workmen's Compensation Board $648 premium and had one claim upon them which was settled for something under $30. In the last ten or fifteen years of our operations in the woods, we have not paid $1,000 in claims for accidents, nor have we had any suit against us, but have been willing and anxious always to reimburse our men for any loss by accident sustained by them whether it was their fault or ours.

You will see therefore, that in the next ten years, if we have the same ratio of accidents, we will pay out to the Government $6,480 approximately in premiums and before we would have paid out $1,000 in claims, so that we consider that this new form of insurance costs us approximately six times as much as it did before and we believe that we are carrying others in our group who are not as careful as we are, to that extent.

* * *

Perfectly Satisfied But Paying Too Much

We are perfectly satisfied with the Workmen's Compensation Act. We think, however, that we, as sawmill owners, are unduly penalized by the rate enforced against sawmills. We do not think that log driving and sawmill work should be in the same classification.

We have run our sawmill for thirteen seasons. We have never had a man seriously injured in our sawmill or lumber yard, and if the rate that we are today paying had been in force for the past thirteen years, it would have paid full time for any workman who might have been slightly injured, we think at least a thousand times over.

We presume that as the Commission get more information, they will reclassify certain industries that they have now grouped together, and if this can be done in the proper way, neither ourselves nor anyone engaged in business has any reason to make complaint.

* * *

It is rather soon for us to give any opinion on the working out of the Workmen's Compensation Act, as we only expected to pay out a small wage last year, and so returned the expected amount, but after the season was over we found we had paid out about double the figured amount. We then sent another statement to the Commission stating this fact, but up to this time we have not heard how much more we will have to pay. The premium we expect to have to pay will cost us more than the insurance we have been carrying for some years, but that is owing to our having had only one serious accident since our company started business. During the year just past we have had no accident whatever. So far as our employees are concerned they have not had any accidents, therefore know nothing about the working of the Act.

* * *

Costing Three Times as Much

In regard to the Ontario Workmen's Compensation Act and the way it is working out with us, we find on looking up the amounts we have already paid and what we will probably have to pay later on, that it has cost us for the past year, three times as much as it would have cost under previous conditions. We have had several minor accidents which, under the previous mode of insurance, the workmen would have got pay for, but for some reason only one of them got any pay and that was only $6.60. We find that it involves a great deal more work reporting these accidents; there is more red tape connected with it and our workmen are not as well satisfied under the present

arrangement as they were previously. We fail to see wherein the workmen are benefited by this Act and we certainly are not. From our experience so far, we fail to see where any one is benefited unless it may be those connected by the administration of the Act for the Government.

* * *

Rate Charged Unreasonable

First thing, I think the rate charged under the Workmen's Compensation Act is out of reason. Ever since I have been in business I have always carried employees' liabilities, and the company seemed to be making money out of the rate charged or they would not have continued it, and now the rate charged by the Government is two and a half times as much. We have been very fortunate here, not having many accidents, only had a few small ones of late. With the Workmen's Compensation Act everything is in favor of the employees, no matter how well the employer keeps up his plant. For my part I think the men should be well treated, but do not think the Government should burden the employer with such heavy rates.

* * *

Advantage To Employees Is Doubtful

We have gone over our records and find that we have had several small accidents and most of the injured employees received about half their wages, which, with their loss of time, did not more than pay their doctor bill. We do not think the scheme is very advantageous for them. Personally we think it is alright, although the rates, on logging especially, are too high compared with other risks which are more hazardous. The number of injured in logging with about 600 men is only about 3 men, whereas in the manufacturing line with probably about 150 men there are about 5 injured, and this is on a lower rate.

As to benefits received, it is too early to discuss them. We think the idea is alright, although the rates are a good deal higher than we should pay.

* * *

The only experience we have had with the Workmen's Compensation Act so far. has been to pay our premium on our pay roll and make some improvements as required around our planing mill. So far, we are pleased to state, we have had no accidents. The rate of premium is 1.80. This covers our entire pay roll. We are not advised as to whether there is a difference in rate between planing mill labor and the regular lumber yard labor. We know, however, that there is a difference in the risk between the two classes as far as liabilities are concerned.

* * *

In our opinion we could have done without the Workmen's Compensation Act as, this last year we have been practically doing nothing and the act did not effect us to any extent. We had a fair law before with government inspection of factories and mills. The only easy way out of it is to run a general store and lumber and log on side. There can be a good trade in that way and escape the Compensation Act.

In ten years past we have only had a loss of $60 for compensation. So far as we can find out by statements concerning last year, the cost of maintaining directors and staff for the Compensation Act amounts to 54 per cent. of the amounts of the compensation paid out to injured employees.

* * *

Although the Workmen's Compensation Act has been working for a year, the actual cost to the employer is not yet known, so that whatever the merits or disadvantages in the bill may be, they cannot be intelligently discussed until the actual operating cost to the employer is known. Within six months this should be fairly well settled and everyone should then be in a position to form an intelligent opinion of the act.

* * *

I had not very much experience with the Workmen's Compensation Act as no injuries happened to any of my men, but I am quite satisfied with the plan of the Compensation Act.

* * *

We are hardly in a position to judge as to the working of the Workmen's Compensation Act, as, while we have been charged certain premiums, we have not yet been advised whether these premiums have been in excess of the requirements of the Compensation Boards or otherwise. It would appear to me that this act, if not abused by the workmen, should work out very satisfactorily. We will be able to give our views more fully after we know what the results of the first year have been, and the premiums it is proposed to assess for this year.

* * *

The premiums we paid to the Compensation Board for 1915 were about three times the amount paid to injured employees by the Board. If this condition has been general. the Board should be able to make considerable reduction in the rates charged lumbermen.

* * *

I think it is rather premature to pass an opinion on the Compensation Act, it having been only a year in force. It is an Act which will require time to bring about a just and fair rating. No doubt we are all rated too high at present. My assessment was eighteen dollars. So far as I can remember I have had one accident in twenty years that would have come under the Compensation Act. I think every one should be assessed according to the number of accidents he has, as some employers are more careless in protecting their laborers.

* * *

We think it unwise for any one to make a comparison of this Act with past conditions, until it has been in force long enough to know how it is going to work out from an economical and humanitarian standpoint.

* * *

I have been in business here about 25 years and have never had an accident of any account and nothing to pay. Last year I paid to the Compensation Board $51 and had no accidents. No doubt the act is good for the workman, but my opinion is that with the wages we have to pay and have paid this last five years, the workmen should be quite able to pay for their own insurance or be taxed for it. Of course I am aware that should an accident occur the act makes it easier on the employe but still the workman who gets the benefit should pay for it.

* * *

So far as we are concerned, the Compensation Act is giving good satisfaction and we have no cause for complaint. Possibly the first assessment was high, but we are hoping that the next one may be considerably reduced.

* * *

The amount we paid into the Compensation Board last year was just about double what we have been paying during recent years to the Liability Insurance Companies for protection.

On the other hand we are relieved from any actions we were liable for from men who were injured in our employment and on the whole we think we would prefer working under the Compensation Act.

We think however that an employee should not draw from the Compensation Board unless he is off work for at least 15 days. We notice that workmen who are slightly injured are disposed to want to lay off and draw from the Compensation Board when they are able to work. We think that any workman should be able to stand the loss of 15 days in case of an accident mithout materially affecting himself or his family. We believe that the Workmen's Compensation Act is considered very favorably by the employees, and also by the employers in our line of business, but a number of them have expressed the opinion that the benefits of the Compensation Act should not be paid unless the workman's incapacity for work extended over two weeks.

* * *

Last year I paid over to the Government as premium $80 and had no accidents. This is considerably more than it has cost me in my fourteen years of operation. Of course I may be one of the lucky employers, as in the fifteen years I have employed about twenty men during the summer months, and in that time have not had any accidents to amount to anything. I think the Compensation Act will have a tendency to create, in some classes of men, a desire to cause themselves slight injury, and render themselves unable to work, for the simple reason that they know they will be compensated by the Government for their injury. Of course this will only be applicable to men who do not want to work.

To my mind the old way of compensating is more satisfactory and of least expense to the country, that is, every employer looking after his employees, and if he wants any protection, go to an insurance company for it.

* * *

I have scarcely given the Workmen's Compensation Act a thought as our premium was such a nominal sum. Fortunately we have had no accidents. I certainly am out what I paid, but feel that I am repaid through visits from officials calling our attention to where precautions are required. I much appreciate it.

I have had a wandering thought of late that we should have a staff of inspectors to keep us warned. Levy a rate sufficient to cover the expense. Make it penal not to keep everything guarded as far as possible. This should be an influence to keep men cautious. Although it would not entirely prevent accidents, no doubt it would prevent them largely. Now that the war has come concurrently with Compensation Act, the strain is heavy. I am not kicking, but the premiums as a whole must run into considerable money. Our war tax must be enormous and must be met, and the question arises, could not the compensation tax be ameliorated so as to provide simply a faithful inspection and warning.

* * *

Act Not Elastic Enough

We had one man injured last year, who laid off about three days, but being a poor man he felt that he ought to try and work if possible, which he did for a few days, but eventually he had to quit work altogether. So we wrote to the Compensation Board explaining just how the situation was, but on account of him going to work for the few days, they would only pay for the first time which he lost amounting to $7,88. He wrote different times to the Board re the matter, but could not get any satisfaction, so gave it up. Of course we consider it very unfair that he could not get compensation and

think that the Act really needs some changes to protect the working man. As it is, it seems only to protect the employer. The great kick that the Board seemed to put up in this case was that the man went back to work within the seven days and also that we paid him the same wages as before he was injured. This we did as a matter of charity. This is the only case we had for the year.

* * *

No More Lawyers' Letters

Our experience of the working of the Workmen's Compensation Act is very limited, but the adjustment of two small claims was very satisfactory and prompt. We find the officials courteous and considerate.

One of the pleasant things about it is the freedom from letters commencing "We beg to advise you that our client Mr. Awkward has placed in our hands his claim for damages on account of being smitten on the nose by a maple switch which had not been removed from the trail over which our client had to pass. Yours truly, Seekum & Skinam."

* * *

Examples of Irregularities In Results

The premiums we paid for 1915 to the Workmen's Compensation Board amounted to $108.90, whereas under previous liability policies our premium would have been $60.50 on the same amount of pay roll.

In the past year we have had but one accident in which the employee was unable for a period of not less than seven days, to do his work, and which was the only case where compensation was received. The compensation received by this individual was $36.30.

In our opinion there are certain conditions in the act which are very unjust. For instance, a man, whose wage is $1.50 per day, meets with an accident in which he is totally disabled temporarily or permanently. At this wage a man is barely able to live if he has any family to keep. If he is injured to total disability he gets as his compensation 82½c per day. Another man whose wage is $5 per day gets injured to the same extent and he gets as his compensation $2.75 per day, in both cases the compensation is reckoned at 55 per cent. of his earnings. To this we would say:—would it not be much easier for the man receiving $2.75 to give up a few luxuries and divide up with the man getting 82½c, thereby giving both a living at about $1.75; than for the other man to live on 82½c per day?

Australian Trade Needs Reciprocal Tariff

Editor Canada Lumberman: Glebe Island, Sydney, N.S.W., Jan. 20th.

We note that you are much interested in doing what you can to develop trade between Canada and Australia. The consummation of your object would be welcome in New South Wales, and it is a matter I have been extremely keen about ever since my visit to your country in 1901. The conclusion I have arrived at is that we must have reciprocal tariff between the two countries; and this has been advocated on many occasions without, so far, any ultimate result. Still, under present conditions, there are very much better reasons to be advanced in favor of establishing a reciprocal tariff in the near future. Our present Minister for Customs—Mr. F. Tudor—is the most capable man who has ever held that position, and the writer feels certain he would give every consideration to any representations made from your side.

One suggestion we might make (which would give your mills an increased trade) is that they communicate direct with the timber merchants here and quote c. i. f. prices. At the present time, purchases are made by merchants here from importers who, in turn, purchase the lumber from your mills at their schedule f. o. b. price and who—at the same time—make arrangements for the tonnage. The mills do not seem to relish the idea of securing tonnage for their shipments, and they also seem to evince a preference for importers rather than doing the business direct with us; so that when you take the matter up with the mills per the medium of your paper it may convince them of the advantage to be received by them if our suggestion were acted upon.

Sales of lumber generally since the commencement of war have depreciated some 40 to 42 per cent. and it is extremely difficult to forecast requirements for the future. At present, as you are doubtless aware, the whole of the tonnage is being lifted by sailers whose owners are asking 105 shillings—per 1,000 feet to Sydney; whereas before the commencement of the war 30 shillings to 35 shillings—was the recognized freight.

We have had an abnormal wheat harvest as you know, and, although the wool clip has been smaller than in other years, the price obtained for wool will recompense graziers for the scarcity in the clip. There is no periodical issued upon timber trading conditions but we are enclosing copy of a report showing quantities of different timbers imported into Sydney during 1914; and when we receive the report on 1915 we will forward it on to you.—Geo. Hudson & Son Ltd., per Geo. W. Hudson.

Editor's Note:—The statement of imports of timber referred to in the above letter shows imports from America, Japan, Norway and Sweden, in one total. The statement is as follows:—Imports for the year from July 1913 to June 1914: Oregon, 79,297,257; Pickets. 3,430,631; Laths, 1,650,265; Redwood, 17,398,181; Door Stock, 1,462,762; Shingles, 199,400; Oak, 1.507,600; Pine, 543,440; Ash, 488,150; Baltic, 25,738,925; total shipments, 131,716,611.

St. Maurice Protective Association

The St. Maurice Forest Protective Association, Limited, held their fourth annual meeting recently at the Place Viger Hotel, Montreal. The report of the president, Mr. S. Laurence de Carteret, stated that the scope and influence of the association had increased materially during the past year, and the introduction of new methods have raised the degree of efficiency attained.

Most satisfactory advances have been made in eliminating indiscriminate slash burning on farmers' lots in clearing land. Use of burning permits in an experimental way during the season of 1914 gave such encouraging results that in 1915 a widespread effort was made throughout the territory of the association to have all slash in clearings burned under the supervision of fire rangers in conjunction with burning permits.

No forest fires occurred from burnings conducted in this manner, and these results have carried much weight with the Department of Lands and Forests when the desirability of the use of burning permits throughout the province has been under consideration.

Among the changes desired being urged upon the Government are: No setting of fires to clear land between April 1st and November 15th without written permits; penalty for refusal to fight fire when called on to do so; increase in penalties for infractions of fire laws; an established minimum for each offence. The consideration given to these proposals by the Minister of Lands and Forests give promise of adequate measures being passed. A distinct advance in preventing fires was made in placing special rangers on the river drives and with improvement gangs. This, with the co-operation of the foremen, should eventually eliminate fires from these sources.

It has been suggested that the members of the association issue written instructions to their woods employees advising them that preventing and extinguishing fires is their first duty, and the president suggested that a standard set of instructions to employees pertaining to forest protection, for use by all the members of this association, should be drawn up.

During the past fire season the total number of fires was 27 per cent, less than during that of 1914, while the number of fires requiring extra labor was reduced 20 per cent. Several hundred miles of portage and trail had again been cut and cleared, making communication easier and quicker. Nine more lookout stations were constructed, making a total of twenty-three.

Good trails had been cut to all these stations with the intention of connecting them to the nearest telephone lines.

The financial statement showed receipts of $37,757.45 and expenditures of $36,509.52, leaving a balance of $1,247.93. The regular assessment for patrol and general expense was a quarter of a cent per acre, totalling $19,731.94. On December 2nd a special assessment of one-tenth of a cent per acre was voted for general uses, principally to cover the expenses incurred in fighting fires. The area patrolled held by members of the association was 7,892,776 acres, to which must be added the settled districts adjoining, but from which no income is derived, and Government lands not under license. The expense in fighting fires during the past season was only 56 per cent. of that during the season of 1914, and a large percentage of the timber killed by fire in 1915 is so located that it can be logged during this and next winter.

Mr. Henry Sorgius, manager, reported that during the season 628 burning permits were issued. Not one of the burnings started under this system got beyond control, nor did any damage result therefrom. Through the use of the system the number of settlers' fires had been greatly reduced in the territory, as the following comparison showed:—1913, 151 fires; 1914, 80 fires; and 1915, 41 fires. The results obtained during the past year were fully sufficient to warrant the demand that no burning of slash should take place between April 1st and November 15th, except under the permit system.

Suit had been brought against eighteen offenders against the fire laws. Six of these cases were won, four lost, and eight were still pending.

Between April 15th and October 22nd, 169 fires, caused as follows, were extinguished:—berry pickers, 7; campers, 3; dam keepers, 2; fishermen and sportsmen, 7; improvement crews, 6; Indians, 2; jobbers, 2; lightning, 4; lunch fires, 4; old fires, 4; railroads, 35; river drivers, 17; settlers, 41; squatters, 1; and unknown, 34.

The suggestion of the president that the members prepare a standard set of instructions to employees pertaining to forest protection was adopted.

The following officers were elected: President, Mr. Ellwood Wilson, Laurentide Company, Limited; vice-president, Mr. Robert F. Grant, St. Maurice Lumber Company; directors, Messrs. Joe. M. Dalton, St. Maurice Paper Company, Limited; Charles LeBrun, Belgo-Canadian Pulp and Paper Company, Limited; S. Laurence de Carteret, Brown Corporation; J. H. Dansereau; secretary-treasurer and manager, Mr. Henry Sorgius.

In the Public Eye

A budget of comment on men and things of moment presented in the interest of our readers, independent of party politics and with malice toward no one.

I wonder what Premier Hearst and his friends think now of J. R. Fallis, and at the same time I would like to know whether Sir Robert Borden has seen the handwriting upon the wall. Fallis is the man who used to represent Peel county, Ontario, in the local legislature. The Davidson Commission showed him up in connection with profits he is said to have made in purchasing horses for the Government. Many a man has disappeared from public life for dealings of this kind, but Fallis did not see it this way; neither did Premier Hearst. Fallis simply resigned and sought vindication by the re-election route. Peel county electors took a different view of it, however, and turned Fallis' former majority of 627 into a Liberal majority of over 300; a turn over of about 1,000 votes. They have given the first public reply to profiteering methods.

Fallis' defeat is a lesson for Fallis, and a pretty clear announcement of the downfall of any others who follow his ideals. If Fallis had made his commission honestly on the horse deals he should have kept it. Handing it over for a patriotic purpose and then seeking re-election was too much for independent Conservatives to stomach. They simply felt that a member of the Government, in his own interest even, should keep his skirts clear, and they went out and voted against Fallis.

When will political leaders in Canada realize that honesty is the best policy and that a clean Government would remain in power indefinitely? That is what I have been trying hard to hammer in, but the task grows more and more difficult, and the Government, instead of taking my good intentions at their face value, has been misconstruing them and classing me with its enemies. If Sir Robert Borden would rise above party politics he would realize that behind these criticisms there lies the best friend the Government could have—the independent citizen who would gladly see him measure up to the stature of a clean and a great political leader.

If Sir Robert Borden fails to see the Peel result in the light of a warning closely related to the Shell Committee situation, he ought at least to recognize it as a public assurance that the people will stand behind him if he tries to stamp out the profiteering business. The defeat of Fallis cannot be taken as a Conservative defeat or as a Liberal victory. It is an announcement of the public temper about profiteering and what it means to any party which fails to stamp it out.

Here is the opinion of a strong Conservative paper (The Montreal Daily Star) on the events in Peel County:—

"BRAVO! PEEL COUNTY:—The electors of Peel County, Ont., are worthy of public congratulation and universal gratitude from the entire people of Canada. Their late member in the Provincial Legislature was a professional cattle dealer, who was entrusted by the Militia Department with the purchase of horses for military service. He pocketed a profit on the transaction—an unforgivable act in a public representative. It is true that when he saw the business in its true light he resigned his seat and turned his profits over to a war fund.

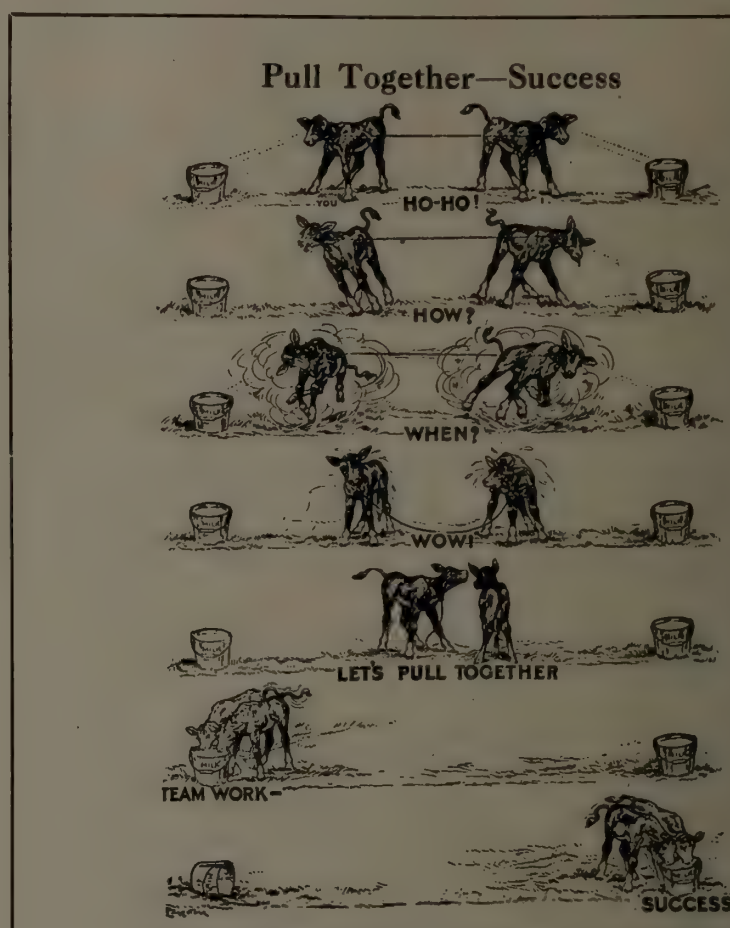
"But he made a mistake in asking his county to re-elect him. They could not do that without seeming to condone his course. So, though they voted Conservative by a majority of 627 two years ago, they voted for his Liberal opponent this time by a majority of 335. That is the right brand of political independence. That is the true way to make use of our party system. We should never allow ourselves to be hypnotized or overawed by it. We should not be its servants—it should always be ours. We should be ready to vote against a bad policy, a bad principle, or a bad man, no matter what label he wears. In this case, it seems chiefly to have been a bad principle—the principle that a public representative can be permitted to make money out of war purchases which pass through his hands."

* * *

When Colonel J. Wesley Allison gave evidence some time ago before the Davidson Commission he stated that he "was not the agent of any company which sold pistols to the Government" and did not profit "in any way, directly or indirectly," by such sale. Major General Sir Sam Hughes, however, now classes him as his special confidential agent in securing munition supplies in the United States, and in cutting down war combine prices charged there. The latest evidence about this special confidential agent was read before the commission a few days ago. Samuel M. Stone, vice-president of the Colt Patent Fire Arms Company of Hartford, Conn., tells of an order for 5,000 pistols given to the company, after a conference between the chairman of the company's board, Colonel Allison, and General Hughes at Moira, N. Y. He states that the Canadian Government paid $18.50 for each pistol, while the U. S. Government has for years been able to buy them for $14,50, and that dealers could buy them nearly 20 per cent. cheaper. Mr. Stone adds that the company gave Col. Allison a "present," a very small one indeed considering his services, but a "present" for all that, and that he "would not like to consider Colonel Allison one of our regular staff."

At present Colonel Allison is in Florida for his health. When he comes back we are told he will be called upon to give more information. Perhaps we will then get at the facts—learn how much he got for a "present" and just what he considered his duties to be, as Major-General Sir Sam Hughes' special confidential agent for keeping down war combine prices. Perhaps too, we shall be given an inside account of the conference at Moira between Colonel Allison, General Hughes and the chairman of the Colt Company's Board.

—SEARCHLIGHT.



How the Western Retail Lumbermen's Association at Portland, Ore., shows that success cannot be attained without co-operation.

Gen. Sir Sam Hughes is reported to be taking steps to organize a battalion of woodsmen in Canada. The War Office has asked that this be done and the Minister has already drawn up plans for raising and officering such a battalion. Prominent lumbermen have expressed their willingness to co-operate in raising the battalion. Companies will be recruited from among the experienced woodsmen of Ontario, Quebec, New Brunswick, British Columbia, Alberta and the northern districts of Saskatchewan. Lieut.-Col. Alex. McDougall, of Ottawa, will be in command, and it is expected that the Majors will be Gerald White, M. P. for North Renfrew, and R. B. Hepburn, of Prince Edward.

In a report recently submitted to the Hon. the Minister of Lands on conditions in the Cranbrook Forest District, mention is made of the severity of the weather, the snowfall in certain sections of that country being heavier this winter than for many years. While this has compelled many logging operators to suspend activities for the time being, there is every prospect of a cut of fifty million feet. Quite a number of ranchers throughout the district are taking out logs, the sawmills buying all that are offered. In the spring the Columbia River Lumber Company intend to begin logging their limits on Bugaboo Creek.

James A. McNair and associates have leased the British Canadian Lumber Corporation shingle mill at Coal Harbor, Vancouver, from the representative of the bondholders, and the plant will likely be started up early in March following some needed repairs to the building. Eight or nine machines will be operated.

Lumbermen Form Insurance Exchange

Inter-insurance Organization Approved by C.L.A.—Being Worked Out as an Individual Scheme—To Provide Insurance at Cost

At the meeting of the Lumbermen's Section of the Toronto Board of Trade held on February 18th, Mr. E. D. Hardy, insurance broker, of Ottawa, was present and delivered an address in regard to inter-insurance on sawmills, lumber yards, etc. This subject was recently taken up by the Canadian Lumbermen's Association at its annual meeting at Ottawa and was referred to a committee. The committee reported at a directors' meeting held in Ottawa during the second week in February. The proposition to establish an inter-insurance organization in connection with sawmills, lumber yards, etc., was then approved by the directors of the Canadian Lumbermen's Association, but it was decided that the Association as a body should not take the matter up, but should recommend it and give it individual assistance as far as possible. The plan is being worked out by Mr. Hardy along lines which are proving acceptable to lumbermen and is meeting with a great deal of encouragement.

In his remarks before the Lumbermen's Section of the Toronto Board of Trade, Mr. Hardy said that they were trying to treat the matter of inter-insurance among lumbermen as a family affair, and not in any way to antagonize the old-line companies. There were four generally recognized forms of insurance. he said. First were the stock companies, second the Lloyds, third the mutuals, such as the Lumber Mutuals in the United States and fourth the Inter-insurance organizations. Inter-insurance simply amounts to the exchange of indemnities between lumbermen through an attorney whom they appointed to act in their behalf.

Eliminating the "Conflagration Hazard"

In connection with fire insurance the element of "conflagration hazard" had always been an unknown factor leading to high rates and frequent losses. Fortunately, in the case of the inter-insurance organizations such as those formed by lumbermen, insurance could be confined to lumber plants. Most of the lumber risks were more or less isolated and in some towns there would only be one risk in the whole locality. Stock companies, taking various lines of risks in one locality were unable to strike an adequate rate and were often obliged to charge a rate based more or less on experience which in some cases would prove to be too high. In the stock plan of insurance any profits from the operations of the company went back to the surplus of the company, or into the pockets of the shareholders. The policy holders only participated in the paying of premiums.

In the case of the Lloyds, the underwriters guaranteed the liability. They paid up a certain amount and were therefore liable to the extent of their private fortunes and in that case of course while there was a saving at the start, there was no return to the policy holders in the form of a dividend or a profit. In the case of the Lumber Mutuals the operation resembled a little more closely that of the inter-insurance plan, the resemblance being that after the profits had been determined the board of directors voted what percentage of the profits should be returned to the policy holders in the form of Dividends. Some of the mutuals were returning 40 per cent. of the premiums and applying a substantial amount to surplus.

Insurance Provided at Actual Cost

The Inter-insurance plan provided indemnity at actual cost. The premium receipts were placed on one side of the ledger and against them on the other side were placed the operating expenses, estimated from long experience at 20 per cent. When the losses commenced to come in they were apportioned pro rata over the premiums, so that each policy holder bore his proportionate share of each loss. Then at the end of the year there was placed to the credit of the subscriber or policy holder all the profits standing to his credit on the books after providing for losses and expenses. The inter-insurance plan simply distributed the losses over the premiums. By confining operations to the very best class of risks and establishing a rigid inspection service they reduced the loss ratio to a minimum.

Mr. Hardy explained that a United States company which he represented in Canada had been operating an inter-insurance organization in Canada under this form, under the name of the Lumbermen's Fire Indemnity Contract. During the past year their loss had been less than 10 per cent. of the premiums. If an average stock company had a loss ratio of about 50 per cent. of the premiums, it considered that it was doing very well. When the present organization operating in Canada had been started, the interests in New York had put up the necessary Government deposit of $20,000. They had now agreed that if Canadian Lumbermen were willing to put up this amount they would retire and allow the organization to be converted into a Canadian one.

Mr. Hardy explained that the idea was to organize in Canada a Lumbermen's Insurance Exchange. By the arrangement made with the New York representatives it would be possible for the Exchange to obtain at the outset the benefit of the time, labor and expense that had been involved in bringing the organization up to its present stage. All that was required was a deposit of $20,000 to be handed to the Government. Ottawa lumbermen had been strongly in favor of this arrangement and many of them had already subscribed to the plan, so that they now had 50 per cent. of the amount required. The subscriptions were being taken in the form of Government war loan bonds recommended by the Government as a perfectly good and stable security, paying 5 per cent.

The organization now have roughly $1,500,000 worth of insurance on their books with premiums of about $35,000. Last year they had reinsured all their business and although they had to pay for reinsurance practically the same rates as they received they had been able to pay all their expenses and would show a profit of about 15 per cent. to subscribers. If they had not reinsured and had known that they were not going to have any fire loses, the profit to subscribers would have been 60 per cent. This year they hoped that they would be in a position to assume some of their own liabilities and if they had an equally favorable year the results would be all the more gratifying.

Experience in Western Canada

Mr. J. L. Campbell, at the request of the chairman, outlined the experience of the Western Retail Lumbermen's Association in the Prairie Provinces. He stated that the Western Retail Lumbermen had been paying on a basis of $2.50 about twelve years ago. The old line companies refused to reduce that rate. The lumbermen then established a company of their own. All those who joined paid a premium equal to what they had been paying to the old line companies. They were soon able to commence building up a surplus and to reduce their premiums. This continued from year to year and they were still building up a surplus and reducing their rates. They had now brought the rate down to something like 30 or 40c and were still building up the surplus.

This association was confined entirely to retailers. It did not touch the manufacturers because the retailers considered that the manufacturing risk was too hazardous. Mr. Campbell was inclined to favor the organization of an inter-insurance association which would confine itself in the first place to retail lumbermen, being doubtful whether it could be successfully applied to the manufacturing risks.

Mr. Hardy thought it would be rather unkind to the manufacturers to exclude them from this form of protection. The question was simply one of determining what rate should apply to the manufacturers or to the retailers. The large manufacturers had been the first to recognize the advantages of this form of indemnity. The largest inter-insurance companies in the United States were controlled by lumbermen who catered to the manufacturers first of all. Their income had been largely built up on the manufacturing business and it was an exception whenever they insured retail yards. In Ottawa the largest lumber firms, those of J. R. Booth and W. C. Edwards and Company were now using this class of indemnity first and then filling up the balance of their requirements with old line companies.

Mr. Campbell stated that he had no intention of throwing any cold water upon the proposal, but he suggested that the manufacturers should take it up as a class for themselves and that the retailers should do likewise.

Mr. Hardy added that while it might be true that the retail dealers as a class had shown a better fire record than the manufacturers, still it was not entirely clear to him that this was the case. There had been numerous fires among retailers in Montreal, if not in Toronto. The plan he had outlined would not involve an injustice to any one class, provided the rate were made commensurate to the risk and the profits were divided in proportion to the premiums. It was simply a matter of adjusting the rates to the hazards. There was no inequality that could not be met by graduating the rates.

At the conclusion of Mr. Hardy's address a vote of thanks was moved by Mr. J. L. Campbell and unanimously carried.

We understand that during his visit to Toronto Mr. Hardy succeeded in securing subscriptions sufficient to complete the government deposit.

British Columbia Western Soft Pine

Qualities and Uses of an Important B. C. Product

"British Columbia Western Soft Pine" is the title of a new bulletin (number 17) which has been issued by the B. C. Forest Branch. The bulletin which bears a cover picture of B. C. Western Soft Pine trees in the forest, contains an extensive description of the wood and its uses. Western Soft Pine is sold under various trade names. In British Columbia it is known as Western Soft Pine and also as Mountain Western Pine. In Idaho and Washington it is known as Western Soft Pine; in California as California White Pine; and in Arizona as Arizona White Pine.

The tree grows almost everywhere in the Pacific and Rocky Mountain forest regions from Southern British Columbia to Mexico. It is, in fact, one of the most widely distributed and important of the western timber trees. The total stand of Western Soft Pine timber is greater than that of any other pine in North America.

The tree is usually smoothly cylindrical and straight, with a long narrow open crown of large branches. In British Columbia the height of mature trees is usually from 80 to 100 feet and the diameter from 2 to 4 feet, though many of them grow much larger. The bark of the mature tree is from 2 to 3 inches thick and is reddish yellow in color. Partly on account of the dry climate which characterizes its range, it is a tree of slow, even growth, producing wood of fine grain and quality. The species is long lived; trees have been found which were over 600 years old.

The Wood

The wood of Western Soft Pine is soft, light, strong in proportion to its weight, works very easily and smoothly without splintering or splitting, and readily takes and holds paints, stains and varnishes. It seasons unusually well, being very free from warping and checking, and once seasoned holds its shape without shrinking or swelling. It varies in color and texture according as to whether it comes from the outer or inner part of the tree.

The outer wood of the tree is yellowish white in color, with a very fine grain and soft satiny texture; it is from the outer part of the logs that all the clear grades of lumber are cut. When seasoned, it is so similar in appearance to white pine that it is difficult to tell the woods apart. In 1902 a carload of this pine (shop grade) was mixed with eastern white pine in a large yard in Ohio, and on a trial, expert graders failed to distinguish one wood from the other. Because of the large size to which Western Soft Pine grows, and because the wood does not check in seasoning, it can be obtained in wide clear stock. The knots, though larger than in white pine, are few in number. The wood is especially suitable for shop and factory lumber. Short clear lengths such as are used for sash and door stock can be cut from between the knots easily, and with little waste, a valuable quality appreciated by factories which purchase pine for cutting out clear lumber between the defects. The soft, even fibre, fine grain, and good working qualities of the wood make it highly valued for all kinds of finish work.

The wood near the centre of the tree is very similar to Norway pine, being orange brown or reddish brown in color. It is less soft than the light colored outer portion, and having as a rule grown faster, it is somewhat coarser in grain. The lower grades of lumber are sawn from the central part of the logs and from top logs.

Weight. The weight of the dry wood per cubic foot is, according to Sargent, 29.4 pounds. The following weights, which have been obtained by manufacturers in making shipments, and are shown in shipping records, may be considered approximately correct:

	Dry	Half Dry	Green
	Per 1,000 feet B.M.		
Boards, Dressed one side	2,000 lbs.	2,450 lbs.	2,900 lbs.
" Rough	2,400 "	2,800 "	3,200 "
" Re-sawn	1,000 "	.....	.....
Shiplap, Finish	1,800 "	2,200 "	2,600 "
Dimensions, Dressed one side and one edge	2,150 "	2,575 "	3,000 "
Timbers, Rough	2,500 "	2,900 "	3,300 "
Drop Siding and Flooring	1,750 "	.....	.....
Bevel Siding and Ceiling, 5/8	750 "	.....	.....
Ceiling	1,700 "	.....	.....
Lath, per 1,000 pieces	450 "	.....	.....

Durability. Western Soft Pine makes a splendid lumber for outside use, and its value in this direction is increased by its ability to take and hold paint well. It is especially suitable for siding and sash and doors. It should not be used in contact with the ground unless first treated with creosote or other preservatives.

Strength. Exhaustive strength tests for Western Soft Pine have not yet been completed, but such tests as have been made show that it is stronger than the white pines.

Sargent gives the following strength values:

Western Soft Pine (Pinus ponderosa)	10,000 lbs. per sq. inch	1,209,000 lbs. per sq. inch
Eastern White Pine. (Pinus strobus)	8,800 " " " "	1,208,000 " " " "
Western White Pine (Pinus monticola)	8,700 " " " "	1,356,000 " " " "
Sugar Pine ..... (Pinus lambertiana)	8,400 " " " "	1,096,000 " " " "

Bulletin No. 101, United States Forest Service, in comparing car sills of Western Soft Pine with Douglas Fir sills of the second grade, gives the Pine the following values: Cross bending strength, 70 per cent.; modulus of elasticity (stiffness), 68 per cent.; and crushing strength, 74 per cent. that of the Fir.

The Cut

Western Soft Pine forms a large portion of the timber cut along the Kootenay and Kettle Rivers, and in the Okanagan and Nicola Valleys. During recent years the annual cut of this wood in British Columbia has averaged around seventy-five million feet board measure.

Uses

Western Soft Pine is manufactured into the same products and used for practically the same purposes as white pine. It is used for nearly everything from common lumber and ordinary rough construction timber to fine interior trim and finish.

Dimensions and framing timber. A large quantity of the pine is cut into the ordinary dimension material used in buildings, such as joists, rafters, sheathing studding, shiplap, etc. Some of the qualities which give it value for these uses are: It does not warp or shrink after being seasoned, is easy to work, nails without splitting and holds nails well. It is used in buildings of every kind—houses, barns, granaries, garages, sheds, and all farm buildings.

Siding. Western Soft Pine is manufactured into all varieties of siding—drop, bevel, novelty, barn, and also the old-fashioned bevel siding commonly called "weather boarding." Its ability to take and hold paint, and the fact that even the thin bevel siding will nail without splitting, makes it especially suitable for this purpose.

Siding is manufactured in two widths, four inch and six inch. In the cities four inch siding is in strong demand, owing to the better style and architectural effects obtainable by its use. In the rural districts the six inch siding has been used most, but the narrower width is now becoming popular.

Outside finish. All wood exposed to the weather should be kept well painted, since paint keeps out moisture and fungi and prevents decay. Some woods do not have the quality of holding paint well. If they are used for outside finish the continual repainting which they need is a big item in the upkeep expenses of a building. Western Soft Pine is especially adapted for outside finish, because it takes and holds paint so well.

Interior finish. Western Soft Pine is a splendid wood for interior finish. Any form of varnish, hard oil, stain, paint or enamel may be used on it. Oils or stains penetrate readily below the surface and give a permanent color, which gradually softens, darkens and becomes more beautiful with age. On account of its softness, even texture, and ease of working, the wood comes from the planing machine without showing any knife marks or fuzz, and with a smooth surface which can be given a high, satin-like finish with less expensive hand labor than most woods. The wood, if properly dried, does not check while seasoning, and when thoroughly dry it stays in place and does not swell or shrink.

Ceiling and Partition. In the form of ceiling and partition, Western Soft Pine is very popular owing to its attractive appearance, its good finishing qualities, and its freedom from shrinking, checking, etc.

Sash and Doors. A large proportion of the shop and factory grades of Western Soft Pine is re-manufactured into sash and doors.

Patterns. Owing to the ability of seasoned Western Soft Pine to hold its shape without warping, shrinking or swelling, it is also used, like white pine, for pattern lumber.

Turnery. Western Soft Pine is a fine wood for turnery stock, because it is easy to work, is of soft texture, fine grained, does not

check, splinter or warp, and takes a high polish. It is manufactured into balusters, grills, newel posts, solid and built-up porch columns and spindles.

Boxes. Western Soft Pine as a box material is equally as good as white and sugar pine, and is extensively used from the Pacific Coast east to the Mississippi River, especially for fruit boxes. It makes a box that is strong, serviceable, and also attractive in appearance. The wood is light in weight, takes a good, smooth finish from the planer, and is easy to print on. Very thin lumber can be used, because it is strong and does not split when being nailed.

Cooperage and Tanks. Western Soft Pine is used in slack cooperage for buckets, kegs, and barrels for shipping fruit. It is also used a great deal for tank stock.

Furniture. Western Soft Pine is well suited for making all kinds of cheap furniture, such as kitchen tables, chairs, and cupboards.

Agricultural Implements. Western Soft Pine is much used in the manufacture of agricultural implements, carriage frames, wagon boxes and similar products.

The Weak Link in Business

By Frank H. Young*

Today business is no longer a thing to be looked down upon by the elite, but it is a profession in every phase of its development. It is a science requiring as deep and careful study as any other profession of the present day.

The sooner men realize the importance of getting together to study out their problems then the question of future trade development and protection will be solved.

Never before have the opportunities for growth been so great, yet never before has there been so much need for caution and understanding that the growth may be permanent and not a temporary splurge with its usual disastrous results.

My chief desire is to awake in every man the knowledge of the possibilities before him if he will only grasp them; to probe under the skin until the weak spot hurts and then prove that there is a remedy which will act as a cure-all most effectively if men can be induced to crawl out of their shell of fear, lack of confidence and jealousy. I do not propose to tear-down excepting to rebuild where the foundation is rotten. I am not a pessimist, but I do believe that out of the pessimism of some the optimists have made the rounds by which they built their ladder to success.

The business man of to-day, no matter what his line may be, just as soon as he thinks himself big enough is prone to forget the struggle by which he succeeded in achieving his present position, takes success as a matter of course, and at this point shows the weakness of inefficiency. Simply because he thinks too much of his own bigness and too little of efficient management. He forgets that where efficiency has built his present success he must continue that same aggressiveness to hold that which he has gained.

Therefore in criticising the administration of any man's business the spot-light should be first turned on the man higher up and not on the office boy.

What The Spotlight Shows When Turned Inward

When things have not been going just right and you are piling it on good and thick, just reverse the glimmer of the spot-light onto yourself. How it shows things up. Cobwebs completely block the door-way of clear sighted, well rounded, efficient management.

Do you play fair in searching yourself for faults? Or do you try to slide the blame off onto some of your employees? Or again do you find places that are weak and skip the spot-light over to some particular feature your natural ability may shine in? The weak spot remains just as big as before. There is hardly a man but that knows how easy it is to let slide, cover up, or go around something they lack ability or energy enough to go through; while the talent which they unquestionably possessed received all the attention and development, with the results that you have become one-sided; efficient in just one feature alone.

How about the time when the weak side of your business is taken sick, will you know how to doctor it with your lack of developed all round insight.

In most cases it is where no employee has the ability to effect a cure; unless you can come to the rescue disaster inevitably follows.

I do not contend that a man can be perfect in all the phases of even his own business, but I do contend that it is altogether too easy to travel along the lines of least resistance, especially when success is coming easy, and leave the things seemingly unimportant but equally as complex to some employees.

Why this preliminary about efficient management you say? We are successful men. We have plenty of money. We can hire efficient help.

In every successful man's life there comes a time when knowledge of every phase of the management of his business is necessary, and it is imperative that he should not be found wanting. He must be able to save himself.

You boast of success because you can buy equal to the best, but don't know anything of the selling, leaving that all to your manager; you may be a wonderful salesman, but never were any good on the buying end; that you always left to someone else. You can buy, you can sell, but the accounting always fretted you; you have a pretty good man who looks after that end, so you don't bother with it at all. Now without questioning the integrity or ability of your salesmen, your buyers or your accountants, what are you going to do if they drop dead? You are going to suffer inconveniences and losses until some one else has ben found to fill those certain places. Further, these able men have a perfectly natural right to be ambitious; they are not going to be salesmen, buyers or accountants all their lives; they are going to have an interest in your business, become your competitors, or some competitor is going to grab them away from you. Without in any way questioning the honesty of these able employees, yet they have stored away in their minds not only the result, the losses and gains, but also every step down to the very minutest detail of how every problem of your business is worked out and developed. They know where you buy, on what terms, the qualities and the service you get; they already have studied out your weak points and know where you could have overcome them to your advantage. They know to whom you sell; what classes are the safest risks; which certain customers are surest pay; they also know the customers from whom you could secure more business. You say all this may be true, but if you have not forestalled every such move in studying out the possibilities of your business I say you are not the efficient managers you could be.

Aside from caring for the buying, selling and possibly examining the accounts of your private ledger once in a while, how many of you ever take the time to go carefully through the accounts as shown on your books. The man who does is an exception to the usual.

The branch of your business that has the most important bearing on the success of your business is given the least thought.

Do you know how your accountant got the figures he posts to your private ledger? Do you know whether they are right or not? Do you watch carefully the purchases from the different business houses? The terms and method of payments? Naturally you say of course I do; don't I sign the checks. I question the depth of the sincerity of your answer. I can cite you from actual experience where one firm worth several millions of dollars thought just as you do, but they were buying on a seventy day basis and I was paying on a ten day basis, with a much larger percentage of discount. They had been doing business that way for over thirty years and never new the change had been made until while poring over the private ledger they discovered a gain of almost 20 per cent. earned over any previous record.

This man had previous to this paid out in discounts which he might have saved enough to keep one family in first class circumstances for a lifetime.

I can cite you a case of what was at one time a partnership owning mills in several parts of the country. These partners were unquestionably evceptionally capable business men, supposedly worth many millions, but they counted their wealth by mills and not by money.

They grow old in the business and their boys who had been living in white flannels and on nursing bottles all their lives assumed control. These boys were not competent to sell popcorn let alone handling a real man's size business. They decided it would be much better sport to sell out, divide the receipts and go back to the nursing bottle life again. Listen to the results. Where they had fully believed each would get over a couple of millions, there was actually less than one hundred thousand dollars left to divide among them all. How did this happen? The two original partners were not efficient business managers; they knew every department of the business but the accounting. They could not tell the meaning of a balance sheet and would not confess it to their accountants. Hence the disaster.

Leaving Too Much to Others

As the result of a series of questions put to several different dealers in lumber I find that an average of 95 per cent. of your sales are on credit. The number of accounts on your books may vary from five hundred to as many thousand. Do you know how your customers care for their indebtedness to you? Do you ever take the trouble to understand the postings to your debtors accounts in the sales ledgers? Is it not true that you watch many of the big contracts and their settlements while the smaller ones you pay no attention to? Do you not also remember many of your customers' accounts and noticing their checks when received in the mail resolve in your mind that

* An address delivered before the State Convention of Retailers at Poughkeepsie, N.Y.

they are pretty good people to cater to without finding out one thing more about their financial integrity?

But what about the hundreds of other charges you know nothing about? Those are left to your bookkeeper too. He is capable of looking after them without any trouble. Your bookeeper will not take any more interest in your business than you do yourself. There is no reason for him to. The amount of responsibility is not properly divided. You expect this man to shoulder the worries that are equal to one-half of your yearly net gain while you say you have other worries to look out for. He has only his position to lose; you your business.

Let us eliminate the good accounts and look into the slow and never pay ones. Statements are rendered, then requests for payment, then you send them severe letters, even going so far as to warn them of possible suit, without a reply of anything better than promises. You finally in disgust, at the next period of closing your books, list the tough ones and forward to your attorney for collection. The big easy ones he goes after and gets in; they mean actual money to him; to the harder and smaller ones he will mail one, two or possibly three letters and then forgets that he has the accounts for collection. Your accountant requests of your attorney a statement of progress on the accounts, receiving in reply a check covering your share of the good collections made and a return of the others with the statement "Obliged to return uncollectable." Your accountant asks you what he shall do about them, and you after saying a few things under your breath tell him to cross them off the books. Mr. Business man you deserve to lose that money; there is no other to blame but yourself; don't try to take it out on your employees.

From figures obtained from dealers in different parts of the State of New York, New Jersey and from many dealers in one large city the following percentages have been averaged: Your individual experience may be different and you personally may not agree with them, but nevertheless they are the figures quoted by representative lumber dealers in the different locations mentioned.

Let us take gross yearly sales on one million dollars for a basis to work on. We find that your net gain averages 8 per cent. or $80,000. On your gross sales we will figure that only 90 per cent. or $900,000 is sold on credit. Of your credit sales 90 per cent. is collected without any trouble; of the remaining 10 per cent. or $90,000, 25 per cent. or $22,500 is collected after considerable trouble on the part of your collectors. The remaining 75 per cent. is turned over to your attorneys for collection.

We will give him credit for being two-thirds successful, and he collects $45,000, retaining, however, $20,000 for his fees; the balance or $22,500 he returns as uncollectable and you cross off to loss and gain this amount, which is 2½ per cent. of your gross sales. This 2½ per cent. is the average of loss by uncollectable accounts as reported by different firms. The average firm fails to connect the collection fees with the loss caused by these accounts. Is there any reason why the $20,000 paid for collections should not be charged in as part of the loss by bad accounts? Adding the $20,000 fees and the amount ordered crossed off you have an actual loss of $42,500 or 4¼ per cent. of your gross sales. This is a total loss your business had to suffer as the result of a weakness somewhere. Do you realize what this means? It means that on a yearly sales basis of $1,000,000 you should have earned $122,500 instead of only $80,000. Your lack of efficient interest in the accounting department of your business has cost you over 50 per cent. of your actual earnings. I can readily understand many of you saying those figures are off, too high, but I would hardly dare doubt the veracity of the men giving these figures. many of them being well known to you as leaders in this profession. Even granting that the figures are too high, if divided, and we use just one-half, making your actual losses by uncollectable accounts only 1¼ per cent. and fees paid attorneys 1 per cent. your actual loss would be 2¼ per cent. or $21,250; over 25 per cent. of what your net gain amounts to. This means that you have given from one-quarter to one-half of your entire year's labor in lost energy.

Who Is To Blame For Losses?

Now who is to blame for all this loss? YOU ARE. "An ounce of prevention is worth a pound of cure" is a safe motto to tack over your desk. Practically the entire amount of these losses could have been prevented. Eliminate the causes. Unhealthy jealous fear of competitors is one of the great bug-bears of nearly every line of business and proves the undoing of many otherwise successful firms.

Why should you grant a man credit just because you knew your competitor across the way would get his business if you turned him down? You had rather risk your money than allow him to get the business. That idea is not business; it is child's play, but very few merchants have backbone enough to overcome such childishness, and it proves pretty expensive in the long run.

The year 1915 has seen greater strides along the lines of efficiency, co-operation, burying the hammer and getting together of business men than has been known in all previous history put together.

The great losses to your business can be overcome.

First—By starting a systematic search for your own weakness.

Second—By competitors getting together and in a friendly way study out the difficulties that each knows should be overcome.

Third—By eliminating jumps in the dark.

Investigation proves that losses by uncollectable accounts could have been prevented by foreknowledge of the integrity and bill paying habits of the party seeking credit, and if such information is not available from systematic investigation or the customer himself, why not let the other merchant take the risk and the loss too.

No business house should extend credit without first knowing the purchasers ability to pay. If a purchaser is unwilling to explain on what grounds he basis his right to seek credit the firm selling him is sure to have trouble and suffer loss. Too often the firm and customer both forget that in seeking credit the customer is seeking a favor or actual loan that is worth to the firm at least ½ of 1 per cent. each month the credit is open, and that the purchaser should in fairness be willing to show wherein lies his ability to care for the debt he desires to contract.

I recently read a bold type ad in a New York paper, "What does a creditor care where the money comes from so long as the debtor meets the bill promptly?" It voices the failing of most creditors. Just because a bill is paid promptly is no excuse for your lack of knowledge of the debtor's resources. The full knowledge of a man's integrity and his bill paying habits are the only mediums upon which to base a man's credit worth.

Many men worth fortunes have become enormously wealthy because they have successfully evaded payment of their just debts, and not one of you men here today but have had experience with one or more of this class. On the other hand many men with small assets, but whose integrity is unquestionable, have proved among your best customers. An occasional loss from reverses is reasonably expected, yet such men do not seek credit for any large amount without gladly securing you against loss. It is only a certain class of speculators, promoters, carpenters, etc., who contract to do certain pieces of work on a protected contract without giving you the same protection that prove the cause of the greatest percentage of your losses. Very seldom can you secure satisfactory security, yet you allow them almost unlimited credit with but a vague knowledge of their ability to care for or even intentions of settling their just dues. Again, in order to secure a certain contract they underbid competition, do the job at a loss, and you are made the goat; obliged to either pocket loss or await your chance to get even.

Co-operation Eliminates The Losses.

If you men would co-operate there would be little chance for such losses. You could entirely eliminate every scalper, unfair promoter and speculator and put that amount of business into the hands of promoters and builders of well known integrity and ability.

The leaps in the dark need not be taken any more. If by the use of a little horse sense you can grant credit to whom you will with a perfect knowledge of how and when payments will be made—why not use horse sense?

Until very recently the means for the proper investigation were not at hand, but now a system has been developed that is applicable to every individual line of business so that every creditor using it need take no chance whatever. For this system covers the compilation of Facts not Thinks, which, however, depends on just how far each merchant gets out of his rut of fear and jealousy.

While there is bound to be in every community a certain percentage of people who solicit credit with no intention of paying, yet the knowledge of the new co-operation credit system being in operation proves like letting down the gates at a railroad crossing; it's only the very few daring ones who will try to get by, But they will find the engine of credit investigation rushing at them and will jump aside or be put out of the running.

On the other hand, there are others doing a business that warrants a desire on your part to extend them credit; if the means for a proper investigation were at hand you would secure a rating and make a bid for their business.

A system of investigation increases your income in two ways; it eliminates losses by bad accounts and opens the way to securing reliable new ones with perfect safety.

Experience with retailers in general shows that in a city of one hundred thousand inhabitants, in one year foreknowledge saved approximately $100,000. Another city just installing a credit system has already proved its ability to benefit its members, and specific

cases can be cited where hundreds of dollars have been saved in individual cases.

Another benefit of this new co-operation is that in change of circumstances the co-operator is advised in time to take steps in order to prevent loss.

I have given as my subject "The Weak Link." I have proved that the weakest link of your business is the credit department. I have shown that the greatest need for development is along lines of credit knowledge. I have shown by concrete example how ridiculously weak this link really is. I have demonstrated the possibilities of welding so that this link may become the strongest in the chain of efficient management.

All that is required is your affiliation and co-operation; your willing self-sacrifice and earnest thought; a broadened view of present day business economies. Be big enough to forget petty competition and jealousies. Make your slogan for 1916 Safety First. An ounce of prevention is worth a pound of cure, and you have made strong the weakest link.

Trade Reorganization—What the War Involves

Germany's Commercial Supremacy Must be Extinguished

A special luncheon of the Canadian Manufacturers' Association was held on February 23rd, at which the members were given an opportunity of hearing an address by Mr. F. C. Armstrong, European manager of the Export Association of Canada, Ltd. Mr. Armstrong is on a brief visit to Canada, after making a careful study of the general business situation in England and France. While abroad he had exceptional opportunities for obtaining reliable information regarding the fiscal policies that are likely to be adopted by the allies before the war is over. In his address Mr. Armstrong said that he had gone to England about the end of September, 1915, to look over the situation there and on the continent, in behalf of the Export Association of Canada. He had now returned to report upon the position as he found it in Great Britain, France and elsewhere, and to consult with the directors and shareholders of the Association as to future steps.

The subject of export trade was of the most vital importance to every Canadian. Next to the winning of the war the most important thing for Canada and for all the allies was to organize their manufacturing industries, transportation facilities. etc., so thoroughly that after the war the prosperity of the country would go on without interruption. When one spoke of "after the war" there had formerly been a great deal of misunderstanding as to just what was meant. During his visit to England and France he had realized that a great unanimity of opinion was developing as to what this term involved. The people of the allied countries had come to realize that they could not be satisfied with winning the war, but must rid the world of German aggression after defeating Germany's army in the field. If they allowed Germany, after the war, to build up her commerce and wealth, they would be giving her power once more to forge another weapon with which to renew her scourge upon civilization. Therefore it had become a matter of the salvation of humanity that Germany should not again be entrusted with the power to repeat the damage which she had been inflicting during the present war.

It was necessary, first of all, to crystalize public sentiment into some concrete and definite understanding of the method by which they could put it beyond the power of any individual to buy German goods, or, if he bought them, to make the price so high that the goods would no longer be attractive. The ordinary machinery for accomplishing such a result was that of tariffs. Mr. Armstrong had been enabled to speak with many representatives of both political parties in Great Britain and had become convinced that all people in Great Britain were now a unit upon the subject of dealing with the tariff question on national and economic lines. Prominent Liberals had told him that there would be no resumption of the tariff fight. The free trade and conscription fights in Great Britain had gone into the melting pot. England would deal in future with the tariff problem from an entirely new angle so that the way would be clear for working out a plan for consolidating and strengthening the whole Empire.

The British Government and nearly every important commercial association in Great Britain had taken the matter actively in hand and were calling for some form of preferential trade arrangements which would be effective along these lines. Sir Richard Musgrave, secretary of the London Chamber of Commerce, had put the matter to him in a very definite form, saying that what they had in view was first of all, to make arrangements for looking after the interests of the Empire, then to do all they could to promote the interests of the allies, then to treat with neutrals as they had deserved, and finally to deal with the enemy and to take the necessary steps to exclude his trade from allied countries. Invitations had been sent out, Mr. Armstrong said, for a meeting on June 4th, of the Imperial Chambers of Commerce, to be held in London, the chief object of which would be to get the best business opinions of the different portions of the Empire to aid in working out the commercial problems that would develop after the war.

First of all, he believed, that it would be recognized that there would be a trade preference given within the British Empire. It was important therefore, to perfect their representation in all the countries which make up the Empire; in Australia, New Zealand, South Africa, the Crown Colonies, India, etc. The Export Association of Canada had already been able to make arrangements for representatives in New Zealand and Australia, both of which arrangements were working extremely satisfactory, except for the difficulty in securing transportation. These representatives would no doubt become distributing machinery of great value. In England Mr. Armstrong had been able to conclude arrangements for promoting Canada's trade with the Crown Colonies. He had even been able to secure orders for many thousands of dollars worth of material, which, in most cases, unfortunately, we could not supply because we were so heavily engaged in the production of war order materials. Canada, however, could count upon a very large field for her manufactured goods in these colonies in the future.

In regard to India and the east it had appeared to him to be inadvisable to open up connections there at present when they were unable to furnish either the goods or the transportation. The promotion of trade in these countries might be left in abeyance for the time being.

In South Africa they were being pressed by the Trade Commissioner, Mr. Egan, to extend their organization and to help in building up Canada's trade with that country.

Perhaps the most difficult country of all to deal with was Great Britain, especially under the present restrictions in regard to transportation. The recent statement by Mr. Lloyd George that the Government of Great Britain had made a mistake in not taking complete control of shipping at the beginning of the war was of great importance. Mr. Armstrong believed that if the Government should take control of shipping, Canada would really be benefitted thereby because, when tonnage is scarce it is inadvisable to tie up shipping in carrying goods from very distant countries such as Australia and the Argentine, when the necessary materials can be had from countries such as those of North America which are so much nearer Great Britain.

After the war, many countries would be urgently in need of articles which formerly could only be made in Germany. The allies could only complete Germany's economic defeat by supplying these materials. Russia had been buying three hundred million dollars worth of goods from Germany annually, in fact over fifty per cent. of the manufactured goods she imported. She could not produce these goods herself. As soon as the war was over she would have to get them, She would not be able to buy them from France or Belgium, because all of Belgium and the finest manufacturing districts of France had been devastated by Germany. She would have to turn to Great Britain, and Great Britain would be very fully occupied and would only be able to take care of a portion of the demand. Then Russia would have to come across the Atlantic. She would come to Canada, beyond any doubt, and would strengthen her tendency to buy Canadian material. But she would not come to Canada to anything like the possible maximum extent unless we went to Russia ourselves and showed her our ability to furnish such materials as she required. If we did so, Russia would be prepared to buy our goods in preference to United States goods. We must therefore study the markets of Russia, and organize our production, distribution and finance, or we would not secure the share which otherwise could easily be had.

Mr. R. J. Young, Joint Manager of the Export Association of Canada, Limited, also spoke briefly, enforcing what Mr. Armstrong had said regarding the importance of organization, and stating that he intended to call upon as many Canadian manufacturers as possible, chiefly those directly interested in the export situation, so as to urge upon them the necessity for joining the Association. Some time in June or September they intended to hold a Canadian National Export Trade Convention which would bring together the carriers, the financiers, the manufacturers and every other national interest which was a factor in the building up of export trade.

Sawmilling Operations Following the Railways

Developments Along The C. N. R. and G. T. P.

Now that the interior of British Columbia is being served by railways to an extent undreamed of a few years ago, the timber wealth of regions hitherto remote is being levied upon by the pioneer sawmall owner to an extent of which the average lumberman can have no conception. Some of these small plants were located ahead of railway construction at points likely to become centres of development later on; others were started up by ranchers and land companies to supply a local demand for building material; but in most cases the impelling circumstances were ideal mill sites going to waste, plenty of good timber close at hand, and the assurance of transportation for the output in case the local demand proved insufficient. Back of all this was a supreme faith in the future of the province and the belief that in the course of time the modest sawmill of today would become the nucleus of a thriving community and be replaced by a modern band mill capable of turning out perhaps 100,000 feet every ten hours. This corallary of events has been duplicated more than once in the past hostory of British Columbia, and is bound to be repeated many times in the future owing to the fact that the rapid settlement of the prairie provinces foretells a demand for lumber in a few years that will tax the ability of our manufacturers to supply.

Some fifteen or twenty sawmills of limited capacity have been located along the Canadian Northern and Grand Trunk Pacific railway lines during the past two years, while probably half as many have been built or are projected at points along the Kettle Valley and Pacific Great Eastern lines. The prediction has been made by several of our most experienced lumbermen that the next ten years will see as many mills erected along our new lines of railway as are now tributary to the pioneer Canadian Pacific line, and in view of the new timber areas opened up, and their nearness to the prairies, the opinion would seem to contain no element of improbability. It may be taken for granted that a large proportion of the rough lumber and timbers to be purchased by the prairie retailers a few years hence will be shipped to them by plants not now figuring in the manufacturing game. By that time, it is to be hoped, the mills at the Coast will be so busy catering to the foreign demand for lumber that the competition of the small mills will be welcomed.

Nelson's Sawmill at Barriere North Thompson River, B. C.

Typical Plant on Thompson River

At Barriere, in Kamloops district, there is a small mill so advantageously placed that the proprietor, J. H. H. Nelson, sees prosperity ahead. The mill site comprises sixteen acres fronting on the Thompson River at a point where the Barriere River joins that stream. The Canadian Northern Railway track parallels the north boundary of the site, thus affording handy shipping facilities by means of a spur line to side of mill. The building is 30x110 ft., with boiler house and filing room 12x80 ft. on east side, and planer room 20x60 ft. on west side. The equipment comprises 50 h.p. Leonard boiler and 40 h.p. Leonard engine, with 60x14 in. drive to circular (54 in. inserted tooth Simonds saw), also 56 in. x 8 in. drive to countershaft above for edger fitted with three 18in. Simonds saws, 40 in. trim saw, 20 in. bench rip-saw, post boring machine, and one 8 in. x 14 in. Cowan outside moulder. Logs are stored in boom in front of mill, delivered on mill floor by friction log haul, and rolled to 50 in. three-block rope feed carriage installed by A. R. Williams Co., Ltd., Vancouver. The filing room is fitted up with saw grinder, double emery-stand, planer knife grinder, and full set of tools for saw repairs. The present capacity of the mill is about 20,000 ft. in 10 hours, but when the need arises this can readily be increased to 30,000 ft., and a comparatively small expenditure would permit of the output being raised to 40,000 ft.

The plant was erected by Mr. Nelson in 1913 as the result of an arrangement entered into with the Barriere Land Company, an offshoot of the Franco-Canadian Trust Company, Ltd., Vancouver. The Barriere Company own some 1,800 acres of excellent land at that point, which is slated to become a town of some importance in the near future owing to the agricultural possibilities of the region. Already there is quite a little settlement springing up, one large general store doing a business of about $3,000 per month. Mr. Nelson operated his mill for about six months in 1913 and about four months in 1914; this year it ran for only two months owing to the limited local demand and the fact that the railway line was not opened to traffic as early as planned. The return of prosperity being indefinite early in the season, when the log supply had to be arranged for, Mr. Nelson decided that it would be unwise to tie up money in yard stock until communication with the prairies was absolutely assured.

There is a good supply of lumber easily available all the way up the Barriere River and North Thompson and East Barriere Lakes, these bodies of water varying from five to nine miles in length. The lumber consists of cedar, fir, white pine, full pine, spruce and silver fir. Next season Mr. Nelson expects to ship to the prairies, and with that aim in view he is arranging to have a sufficient supply of logs taken out this winter by ranchers to keep his mill running steadily all summer. Being located well towards the summit of the mountain range, the mill should enjoy a considerable advantage in freight rates over the Coast plants.

Farm Demonstrating as Side Line

Following the example set by many owners of small mills in the interior of the province, Mr. Nelson utilized his spare time in demonstrating the soil possibilities of his holdings. He cleared a large portion of the mill site and farmed it in thorough fashion, the result proving that the Barriere Flats will grow anything in the shape of farm and garden produce. Mr. Nelson, referring to this branch of his activities, writes the Western Lumberman as follows: "I used the land for demonstrating all kinds of garden and field produce without irrigation for two years, the results being exceptional in character. All kinds of fruit grows to perfection here—even peaches, apricots, watermelons and muskmelons. Tomatoes ripen splendidly and the climate is well suited for general farming and sheep raising. The climate here is simply grand—after living for 30 years at the Coast before coming up here I am well pleased with the change. The temperature in summer reaches 85 degrees, but it is a very dry heat; in winter it goes as low as 25 degrees below zero, but the air is very calm and dry, and one does not feel the cold as severely as at the Coast. We get from one to two feet of snow, coming about 15th of December and lasting until 15th March. This gives splendid sleighing all winter and facilitates outdoor work of all kinds."

The hydro-electric power system of the City of Kamloops, generating 10,000 h.p., is situated five miles up the Barriere River and the power lines run through Barriere town site and within 200 yards of Mr. Nelson's mill. He is thus assured of cheap power to any extent desired, and this will be a factor in plans for the future development of this promising mill proposition.

A Boy Scout Forest Book

Copies of a Boy Scout Forest Book have been presented by the Canadian Forestry Association to the sixteen thousand boy scouts of Canada as part if an educational propaganda for forest protection. In the thirty-two pages of text and illustration the boy is made acquainted with the Canadian forest as a personal and national necessity. The subject is handled from a new angle and the young reader is given the business reasons for putting an end to our plague of forest fires. The idea is an excellent one and ought to bear good fruit.

Fewer Ties Being Taken Out

We are advised by a firm in close touch with the situation that, owing to the great number of men that have enlisted, and the high wages prevailing in the lumber camps, very few if any railway ties are being taken out this winter, and it looks as if there will be a shortage when the railways commence to look for their requirements later on.

The Crescent Belt Fastener Co. Toronto., H. J. Walker, manager, have moved from 28 Wellington St. W., to larger offices at 32 Front St. W.

Plant of Port Clements Milling & Trading Co., Port Clements.

Sparks & Atkin's Mill, Sewall, Graham Island.

Spruce Mills Operating in Northern British Columbia

The strong and increasing demand for spruce lumber for aeroplane construction and box-making purposes is resulting greatly to the advantage of the lumbermen in the northern part of B. C., where the finest spruce limits are located. Particularly is this true of the Queen Charlotte Islands, where the quality of the spruce timber is unexcelled. Four or five plants on the different islands are taking on a new lease of life as a result of their entire output having been contracted for by Vancouver and other firms. It is altogether likely the demand will lead to the opening up of other timber propositions and the erection of several modern plants of good capacity. In the meantime the existing small mills are making the best of their opportunity by improving their facilities and adding new machinery.

At Sewall, on Graham Island, Messrs. Sparks & Aitkin have a mill with a capacity of about 40,000 feet per ten hours. It has circular rig, the equipment being of heavy design to handle the big timber. For several months past the owners have been busy with improvements, and manufacturing commenced on January 3rd. The firm employ about 50 men—25 in the mill and the same number in the woods.

Another Graham Island mill was erected several months ago at Port Clements by the Port Clements Milling & Trading Company. This plant has a daily capacity of about 20,000 feet, has been cutting steadily for some months, and made the first shipment of spruce lumber to Vancouver early in December per Union Steamship Co. The owners, Messrs. E. J. Tingley and Chas. Coulson, are possessed of large timber holdings and are doing their own logging. About 30 men are employed in the mill and woods operations.

At Massett, also on Graham Island, Messrs. Wanless & Brickman have a small mill with a present daily capacity of 8,000 feet, but this will be increased to about 20,000 feet in the spring, according to the present plans of the owners. The mill is cutting steadily and has already made a shipment of lumber to Vancouver.

Still another Graham Island mill is being operated by W. L. Barton, also near Port Clements. In its present shape the outfit is a rather crude type, but creditable indeed as the work of a pioneer who was hampered by a lack of equipment. The site is a desirable one and the plant is now being enlarged to a capacity of 10,000 feet per day. Mr. Barton visited Vancouver recently and purchased a new engine, carriage, edger, log haul, transmission, etc., from J. B. Weir & Co., Ltd. Mr. Barton had his improved mill in operation early in January.

Typical Spruce Tree, Graham Island.

The mill of the Moresby Island Lumber Company, on Moresby Island, is owned by Seattle parties and at one time had a good output. It has not operated for four or five years past and is fast falling into decay. It is reported the shareholders are sending a practical man to report the probable cost of putting the plant in good shape, believing the time has arrived when money can be made by developing their extensive cedar and spruce holdings.

Messrs. Timms, Phillips & Co., Ltd., lumber wholesalers and exporters, Vancouver, have contracted for the output of the two Port Clements plants and also the small mill at Masset. Smith, Shannon Lumber Co., Ltd., Vancouver, will handle the cut of the Barton mill.

Miscellaneous Items of Interest to Lumbermen

The Main Belting Co. of Canada, Limited, of Montreal, have opened a Toronto office and warehouse at 32 Front St. W., with Mr. S. R. Walsh in charge; as Ontario representative.

Geo. Bury, vice-president of the Canadian Pacific Railway, states that the C. P. R. system uses, in a single year, five million track ties, two hundred thousand fence posts, fifty thousand telegraph poles, and sixty million feet of lumber.

A despatch from Port Arthur, Ont., states that the Pigeon River Lumber Company, Limited, on account of the scarcity of labor for their camps is asking for the release of fifty Austrians interned at the camp at Kapuskasing.

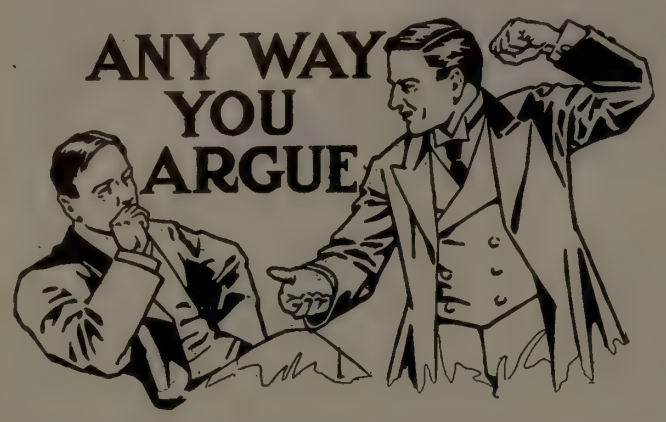
W. E. Allen, who is in charge of sales in the United States for the Finger Lumber Company, has left Milwaukee for Winnipeg, where he will be in charge of the combined Canadian and American sales forces. The combination is due to shortage of stocks.

An order for 51,000,000 feet of lumber for the Italian Government was recently placed with the yellow pine mills of Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Missouri and Oklahama. The specifications called for 29,000,000 feet of boards, 15,500,000 feet of timbers ranging in size from 2 x 4 to 12 x 12 inches, and 6,500,000 feet of railroad cross ties.

The charter rate from Puget Sound and British Columbia ports for lumber to South Africa has recently advanced from 160 shillings per thousand board feet to 190 shillings. Other rates for foreign lumber from Puget Sound remain unchanged at the following figures: To New Zealand ports, 110 shillings; to Sydney, Australia, 97 shillings 6 pence to 100 shillings; to Melbourne or Adelaide, 110 shillings; to Valparaiso and Callao, 95 shillings.

During the month of December, 1915, the latest for which statistics are available, Canadian exports of printing paper were valued at $1,753,013, which is a new record for any month in the history of the industry. Of this amount, the United States took printing paper to the value of $1,425,312. Australia took paper to the value of $170,745, and New Zealand's share was valued at $119,759. During eight months of the current fiscal year Canadian exports of printing paper to Australia were valued at $510,489, and to New Zealand $315,032. To Great Britain printing paper was sent to the value of $131,832.

WANTED & FOR SALE DEPARTMENT



"There's One Best Way"

There's one best way to buy and sell special lots of lumber, second-hand machinery, timber lands, etc., and that is by inserting a small advertisement in this department.

Every mail brings word of big results from these small ads. Last week a large lumber firm sold their entire 1916 cut, several million feet, through an advertisement on this page.

What Have You to Advertise?

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Wanted–Lumber

Wanted good sound Basswood logs, 12 in. and over in diameter. Quote best price F.O.B. cars. Apply Hay & Company, Limited, Woodstock, Ont. 3-6

WANTED—Four cars 1-in. No. 2 Common and Better Hard Maple. State when cut, lengths, widths, and price, with Toronto Freight rate. Box 286, Canada Lumberman, Toronto, Ont. 2-5

WANTED—A quantity of Hard Maple and Birch, both for immediate and future delivery. 1 inch and thicker. State quantity you have to offer, price and full particulars. Box 285, Canada Lumberman, Toronto, Ont. 2-5

WANTED—During summer will need—
Soft Maple
Hard Maple
Birch
Beech
Elm
Ash
Basswood

Can use all grades or whatever you cut at your mill. What have you to offer?
Box 284, Canada Lumberman, Toronto, Ont. 2-5

Wanted

Wanted for shipment whenever in shipping condition:
2,000,000 ft. 3 in. No. 1 Com. & Bet. Soft Elm.
1,000,000 ft. 2½ in. No. 1 Com. & Bet. Soft Elm.
1,000,000 ft. 2 in. No. 1 Com. & Bet. Hard Maple.
500,000 ft. 2½ in. No. 1 Com. & Bet. Hard Maple.
Box 332, Canada Lumberman, Toronto, Ont. 5-8

Lumber Wanted

Wanted several cars maple, beech or birch squares 1, 1⅛, 1¼ in. x 42 to 60 in. in length. Write for particulars. J. Finlay & Sons Co., Norwood, Ont. 5-8

Grey Elm

Wanted 100,000 ft. of 1½ in. grey elm, No. 1 common and better, this lumber not to be edged, and can be loaded direct from the saw, but must be in 6 or 12 ft. lengths. Write for prices f.o.b. cars shipping point. Box 295, Canada Lumberman, Toronto, Ont. 3-6

Maple Squares

Wanted to buy 700,000 Maple squares, 1 in., 1¼ in., 1½ in., 1¾ in. and 2¼ in. Lengths 12 in. and up. A. K. Hansen & Co., St. Peter Street, Quebec City. 3-6

Wanted to Buy

450,000 ft. 2 in., 2½ in., 3 in. and 4 in. log run Birch. Terms 75 per cent. cash on shipment, balance on arrival. Apply P. O. Box 643, Montreal, Que. 3-6

Wanted

All kinds and thicknesses of hardwood and softwood lumber. Give full description of same, together with price. Box 328, Canada Lumberman, Toronto, Ont. 4-t.f.

Basswood Wanted

Wanted 200,000 feet of 1-inch White winter cut Basswood to grade No. 1 Common and Better, to be plump 1-in. thick when dry. State price F. O. B. cars shipping point. Address, Box 308, Canada Lumberman, Toronto, Ont. 4-t.f.

Logs Wanted

Several cars Rock Elm logs. Quote price to St. Marys Wood Specialty Company, Limited, St. Marys, Ont. 4-7

Wanted

Two cars No. 2 Hemlock, sized in widths in 2 x 8 and 10 - 10 ft. to 16 ft. Part 1 car 1-in. dressed.

Two cars Cedar Posts, dry, peeled, sound, 3½ to 4½ top; 8 ft.; for cash. Apply Box 195 Jordan, Ont. 4-5

Soft Elm and Poles Wanted

Soft Elm, one or two cars, firsts and seconds, 3 in. and 3½ in. Quote lowest price. Also want poles 8, 16 and 24 feet, Tamarack or Hemlock. Large number wanted. Box 349, Canada Lumberman, Toronto, Ont. 5-6

Wanted

We are in the market for a large quantity of 2-in. Spruce Plank 4 in. and up wide, 8 feet and up long. Good merchantable stock. Kindly write us your lowest price. Box 334, Canada Lumberman, Toronto, Ont. 5-t.f.

Wanted

Several cars 16/4 Birch, No. 2 common and better grade. Must be dry and ready for immediate shipment. Write us your lowest price and full particulars. Box 333, Canada Lumberman, Toronto, Ont. 5-t.f.

WANTED
4-ft. Plastering Lath

We are ready to contract for 75,000,000 No. 2 and 3 Lath, cut 1½ x ⅜—4 ft., bundled 50 pcs. per pack. Can use mixed Pine and Spruce or all Spruce. Advise what you have now, quoting prices f.o.b. Chicago. Will consider proposition on your 1916 cut if you have no dry lath on hand.

Cannon River Lumber Company,
5-6 Webster Bldg., Chicago, Ill.

Spruce Pulpwood Wanted

Spruce Pulpwood wanted of good size, merchantable quality, four-foot peeled preferred, on cars shipping point. Box 323 Canada Lumberman, Toronto, Ont. 4-7

Lumber Wanted

All kinds of hardwood lumber, also Hemlock. Wire or write. J. R. Summers, Tyrrell Building, Toronto, Ont. 5-5

For Sale–Lumber

For Sale

One car nice 8/4 Rock Elm running high in grades. C. B. Janes & Co., Limited, Orillia, Ont. 5-5

For Sale

White Pine and Hardwood, estimated 300,000 feet, will cut to order. G. A. Patrick & Son, Delaware Saw Mills R. R. 2, Lambeth, Ont. 1-6

Poplar For Sale

For sale two cars 1-in. Poplar cut March, 1915. Enquire by letter to Knight Bros. & McKinnon, Limited, Box 569 Cobalt, Ont. 4-tf.

Lumber For Sale

200 Pieces 1 x 15 and up 22 ft. Cypress.
375 Pieces 1 x 15 and up 24 ft. Cypress.
Clear for boat building, in stock at Montreal.

GEO. C. GOODFELLOW,
c Montreal, Que.

For Sale

200,000 pcs. 1½ in. x 4 ft. No. 1 Spruce Lath.
200,000 pcs. 1½ in. x 4 ft. No. 2 Spruce Lath.
36,000 feet 1 x 9 in. Mill Run White Pine.
Box out, 12/16 feet, bone dry stock. The Elgie & Jarvis Lumber Company, Limited, 18 Toronto Street, Toronto, Ont. 5-5

Wanted–Machinery

Wanted

Small portable mill suitable for sawing ties, must be cheap for cash and in good order, either steam or gasoline. Send full description. Herbert Grier, 137 McGill Street, Montreal, Que. 5-5

For Sale–Machinery

For Sale

One large Goldie & McCulloch Planer and Matcher, 14 in., good repair.

One Clark & Demill Double Surfacer, 14 x 26, not been used much. Will take lumber in exchange. Box 339, Canada Lumberman, Toronto, Ont. 5-5

Engine For Sale

Corliss Engine, 150 H.P., 18 cylinder, 24 inch leather belt, with pump, first class condition, no fault, changing to Electric. Inspect at Guelph Lumber Co., Guelph, Ont. 5-8

Saw Mill Machinery For Sale

Second-hand Machinery for Complete Saw Mill, all practically new, in excellent condition, including Bullwheel, Steam Kicker, Steam Nigger, 42-in. Steel Carriage, 10-in. Steam Feed, 8-ft. Waterous Bandmill, 5-saw Slab Slasher, 48-in. Edger, Trimmer, also Independent Lath-mill, and Filing Room outfit. Power Plant complete. Offers accepted for all or any part. On view at the Waterous Engine Works Company, Brantford, Ont. t.f.

Wood-Working Machinery

1—36" Crescent band saw, A1 condition $75.00
1—24" Cowan double surfacer, A 1 condition 375.00
1—8" Crescent jointer 75.00
1—Variety saw table, iron 85.00
1—Wood frame, 8 ft. saw table 60.00
1—Combination drill and mortiser, McGregor-Gourlay, 4" stroke, table ¾ x 5½, raise and lower 12", side movement 10", knife 1" wide 50.00

Pollard Manufacturing Company, Ltd.,
5-8 Niagara Falls, Ont.

Machinery For Sale

A small "Ad" under this heading, telling of what machinery you have for sale, will immediately put you in touch with buyers. Send us a list of machinery items and we will quote you on a small "Ad." Send the list now, before you forget about it. 1-t.f.

Wanted-Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

Wanted position as band saw filer, long experience and good references. Box 300, Canada Lumberman, Toronto, Ont. 3-7

WANTED to hear from lumbermen who anticipate needing a mill foreman this spring, by an experienced mechanic who can give results, open to engagement. Any capacity. Box 283, Canada Lumberman, Toronto, Ont. 2-5

Open for year round position April 1st to take full charge for company with large stock of logs interests of the sawing, grading, estimating and inspection of all shipments. Married man with twenty years of experience as lumber inspector and manager. Box 305, Canada Lumberman, Toronto, Ont. 3-6

are often received to "Wanted" and "For Sale" ads. on this page. Even 50 replies are not an uncommon return from the investment of the small amount a condensed ad. costs. And isn't that good business—to get right into close touch with so many people interested in what you have to buy or sell? For you can be sure their transactions with you will not end when they have closed the business your single ad. announced.

J. E. Ray, Canadian Trade Commissioner at Birmingham, England, reports that "several firms have inquired for picture frames and timber suitable for their manufacture. Supplies were formerly obtained from Norway, Holland, Italy, and Germany. Plain oak and finished moldings are now being imported from the United States, and one large buyer states that he would prefer to transact business with Canada if manufacturers can supply what are known as raw oak moldings.

Review of Current Trade Conditions

Ontario

The lumber trade in Ontario continues very quiet, there being no feature so far as local trade is concerned, except perhaps the interest which is being taken in the renewed appearance of prospective shell box orders. So far as these are concerned, however, although orders in considerable quantity are likely to be given out in the near future, the situation is not at present so promising as it was in connection with the orders which were completed last year. A number of firms with whom we have discussed the situation advise us that the system of giving out orders has been entirely altered under the management of the Imperial Munitions Board, and that they are now calling for tenders for specified boxes upon a standard tender form, and that the business is expected to go to the lowest tenderers. In this connection we have heard considerable dissatisfaction regarding the fact that some parties who have no connection whatever with the box making or lumber business are submitting tenders, and seem to be confident of getting a large portion of the orders by tendering below the actual cost of production. What there may be behind this situation is hard to say. The prices they submit, whether they deliver the goods or not, are likely to affect the Munitions Board in giving orders. In short, it is feared that the Board may give attention entirely to price and not to the bona fides of the tenderers. Many Ontario manufacturers who could quote on this business and handle it satisfactorily in large quantities are likely, for the above reason, to refrain from doing so, as they feel that it will be of no use. If the orders which are under consideration are given out, however, at reasonable prices, they will be the means of creating considerable activity in the local trade in Ontario.

The building business continues practically dead from a comparative point of view. What it will be during the coming spring and summer is difficult to say, though we have lately heard a little more optimistic opinion in this regard than was general a few weeks ago. In the United States, a great increase in building operations is developing. We have many of the same factors at work in Canada to produce a similar state of affairs and it is not impossible that the large amount of money which has come into circulation during the past six months on account of war orders of all kinds will create a fair amount of building activity.

The situation in connection with B. C. shingles is exceptionally interesting at the present moment. We publish elsewhere in this issue a report from British Columbia showing that the stocks available are far below the quantity of orders on hand and that production has been so greatly curtailed of late by severe weather and the closing down of mills that available stocks will not catch up to orders for some months. Under these conditions wholesalers in Ontario are expecting shingle prices to advance.

Manufacturers and others interested in the export business to Great Britain are discussing with a good deal of interest the embargo ordered by the British Government upon the importation of hardwoods, the object of which is said to be the saving of cargo space for materials that are more urgently required. The embargo prevents importations, except under government license, and it may result in stopping imports of Canadian birch and other hardwoods which have been extensive during the past year. It remains to be seen, however, whether the British Government will provide for imports of these lines by issuing special licenses to cover such shipments as are required.

Eastern Canada

The export trade situation at St. John, N. B., shows no change. The freight problem is still the most important factor in this connection. At present, freight rates are still advancing and practically no vessels are available to take up the increased offerings. An ordinary price now is 250 shillings per standard on deals for summer shipment, and very few charters are being made, because of the scarcity of vessels. English deals at St. John have been selling in a few cases at $20 per M. for 50 per cent. 3 x 7 and 8, 50 per cent. 3 x 9 and 11, with scantlings at usual reductions. This is a record price for a mill cut at St. John. All deals have been sold ahead.

A strong upward tendency is reported in the New England spruce market with a firm base price of $27 for 2 x 8 and down, 20 feet and down, delivered. Stocks of spruce are scarce as most of the mills are tied up. Logging conditions are good throughout New Brunswick and the results of the winter's operations will now depend entirely upon the drives.

The Montreal trade is much interested in orders for shell boxes which were called for recently by the Imperial Munitions Board. It is stated that orders for 500,000 boxes were included in this call for tenders, and that 275,000 were called for in Montreal. Under the new arrangement the Munitions Board is asking for tenders on all this work. Local trade in Montreal is slow. Export trade is fairly active and the outlook is encouraging. Indications in connection with the export season are that it will again be an anxious one for shippers, as freight rates are still advancing and tonnage will probably continue scarce. Enquiries from Great Britain are numerous. It is possible that the British Government's prohibition of import of furniture woods, and hardwoods, except under government license, may reduce Montreal's exports of birch.

Reports from Boston indicate that the eastern spruce market shows continued strength. Retail yard men are buying both frames and random dimensions more extensively. Manufacturers and commission dealers will now quote nothing less than $27 base, Boston rate for rail shipments of frames. Some producers are asking 50c and even $1 more. The demand continues strong, being considerably in excess of normal for this time of year. Quotations on random stock are about $1 higher than they were a fortnight ago, the current prices being 2x3, $22 to $22.50; 2x4, $22.50 to $23; 2x5, 2x6 and 2x7, $21.50 to $22; 2x8, $25 to $25.50; 2x10, $26.50 to $27; 2x12, $27 to $28. The market for spruce boards is now showing some real strength. Stocks have been considerably reduced, and dry covering boards, 5 in. and up wide, 8 ft. and up long are held at $22. Matched boards, 10, 12, 14, and 16 feet are bringing $25 to $26. The hardwood market at Boston shows greater firmness. Firsts and seconds inch maple are bringing $41 to $43; basswood $43 to $45; red birch $53 to $55 and sap birch $45 to $47. The enquiry for eastern hemlock at Boston is fairly satisfactory, with quotations strong. The best clipped boards 10, 12, 14 and 16 ft. are bringing $22.50 at least, which is $3 higher than the prices which prevailed last fall. White cedar shingles at Boston are showing a little increased strength, as a result of the higher prices for red cedar shingles following the adverse weather conditions in the Pacific coast districts. White cedar extras are bringing from $3.35 to $3.50, and clears are now held at $3 to $3.10. Red cedar shingles are somewhat uncertain in price. There is a little better enquiry for lath. Sales of 1½ in. have been made up to $4 and 1⅝ in. continue steady at about $4.25.

United States

One of the most important features in connection with United States lumber trade conditions during the past fortnight has been the widespread curtailment in production caused by extreme weather conditions. These have varied from floods in the south and blizzards in the east, to excessively cold weather and heavy snow storms in the west, the result being the tying up of extensive production districts. Business conditions, however, have been progressing satisfactorily throughout the United States. Building operations for instance, although considerably restrained by the weather, give promise of great activity as soon as weather conditions are fairly settled. Activity in this line promises to be greater than it has been for many years. Increases in building permits are reported from practically all parts of the country and most of the increases are on a remarkably extensive scale. The steel industry is making great gains, the amount of unfilled orders on books of the steel corporation being now greater than at any other time in its history. Railroads are in a better financial condition than they have been at any time for a number of years. They are thus ready to make heavy expenditures for new rolling stock and equipment as well as for necessary repairs.

In the southern pine territory, buying for spring trade has already commenced. For the week ending February 11th the order files of the Southern Pine Association showed for the first time in several weeks an increase over production. Mill stocks are badly broken and the recent curtailment in production on account of severe weather makes it look as though there cannot be any large accumulations of stocks anywhere in the southern pine district.

In the north Pacific coast district, recent reports indicate what looks like improvement in weather conditions, but there is fear of floods following the thaw which is expected. It does not look as though mills in that territory will be able to produce again at their normal capacity for some weeks. There have been opportunities recently for these manufacturers to quote on a considerable amount of desirable business, but few have been in a position to guarantee delivery and they have therefore been seriously handicapped in their

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. Bole, Pres. F. H. Goff, Vice-Pres. E. C. Barre, Gen. Mgr. W. A. Saurwein, Ass't. Mgr.

efforts to get the business. The market on the Pacific coast has continued to gather strength and advances are expected to be maintained, even further advances being likely.

The hemlock situation continues very favorable, the chief difficulty now being the inability of manufacturers to supply the demand for certain sizes and lengths. This is in marked contrast to the situation of a few months ago when nearly all the mills had stocks far beyond normal and hemlock was a drug on the market. Heavy shipments during the last few months have depleted stocks and the continuation of the present demand will stiffen prices. Northern pine also is in a favorable position, with a very satisfactory demand and good prices.

Great Britain

Few fresh goods have recently arrived for the London spot market and the numerous cargoes lying on the quays are being piled only at a very moderate rate. Not 15 per cent. of the European and Canadian deals at the quays were yet available for delivery at latest reports, although the demand for them was very strong. Deliveries from the docks have therefore been showing a falling off, amounting to 2,354 standard during the week ending January 29th as compared with 4,483 standards during the corresponding week of 1915. Prices of all stocks that can be moved are continuing to increase and it is difficult to find any size or quality that can be had at less than 3 shillings cube. The scarcity of tonnage and the resulting high freight rates are the chief factors in the price advances. Forward buying is not extensive, on account of the inability of shippers and buyers to agree regarding terms.

At Liverpool, the c. i. f. business in spruce deals is confined for the time being to small parcels by liners and higher prices are being obtained, stocks being quickly snapped up when offered. Very little forward buying for the season is in evidence as shippers are unwilling to take the risk of the freight market and are quoting f. o. b. or on a freight basis c. i. f. Up to the present, only a limited quantity has been offered even on these terms. Shippers are asking for higher f. o. b. prices than those of last year and as the freight market is still very uncertain importers are not inclined to take the risk which shippers are also unwilling to assume. The spot market shows further advances. The consumptive demand continues on an active scale with every indication of keeping up, and as stocks are becoming more and more depleted values seem certain to advance. During the next two months it is expected that the almost complete cessation of arrivals will make itself very apparent. C. i. f. values for birch at Liverpool are firm. The spot market is very steady and the consumptive demand continues strong. Stocks are gradually being decreased and values are advancing.

At Manchester, the trade continues active. Prices are as strong as ever, in fact stronger than they have been in the past as a result of the threatened restrictions of imports. On a recent parcel of wood goods from Ottawa to Manchester the total freight rate from Ottawa to the ship canal was 250 shillings per standard. Pine goods are advancing rapidly in value at Manchester. The price of 3rd quality Quebec pine 11 in. x 3 in. is about £29 per standard, and 4th quality about £26 to £27, and stocks are running very low. Sidings also are advancing in price. All industries using timber are very busy with the single exception of building.

At Glasgow, the price of spruce continues to advance, without any appearance of a set back being possible in the near future. Imports continue on a moderate scale and are far from adequate to meet the requirements of the market.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Montreal Getting New Shell Box Business

Montreal, February 23rd; (Special to the Canada Lumberman):—The most interesting feature of the market is the inquiry by the Imperial Munitions Board for shell boxes. Orders for one and a half million boxes are to be given out, and of these 275,000 are allocated to the Montreal district. The Board have now adopted the tender system, and the bids were to be in by February 28th. There is certain to be keen competition for the orders, as some of the factories are short of business. Owing to this lack of orders, and the Government not taking quick deliveries, work was recently suspended in some instances. The new orders, it is said, will involve the consumption of two and a half million feet of spruce and about half a million feet of birch, all dry stock. The following are details of boxes required in Montreal: 50,000 two round six in. shell; 3,000 2-pound shell; 25,000 two round 60-pound shell; 70,000 two round 4.5 shell; 30,000 one round eight shell; 40,000 six round 18 pound shell; 30,000 one round 9.2 shell. Inquiries have been received from Ontario as to securing lumber in case factories should be successful.

Local trade is very slow, with wholesalers reporting an occasional good order for rush contracts. Business with the United States keeps up very well indeed, and prospects are stated to be bright for increased trade. Advices from the province report a brisk demand for pulpwood, and a quickening of values.

Although the export season is some way off, there are indications that it will be one of anxiety for shippers. Freight rates will certainly not be lower than at the end of last year. The chances are that they will be higher, with increased difficulty of securing tonnage. Provided firms can obtain vessels, it is more than likely that exports will be extremely good, as there have been inquiries for large amounts of lumber for the other side. Montreal exports a considerable quantity of hardwoods, principally birch, and in this connection it may be pointed out that the British Government has prohibited the import, except under Government license, of furniture woods, hardwoods, and veneers. The Government is aiming at a reduction of these and other commodities, and it is possible that the exports of birch from this port, which showed a very large increase last season, may be considerably affected.

In the pulp and paper sections, sulphite has had another advance, and prices are now at a very high mark. Inquiries are more numerous, it being feared that quotations will go ahead still further. This condition is due to the restricted importations from Europe, United States' consumers turning to this country to supply the deficiency. The embargo on pulpwood, paper, etc., by the British Government, will not affect Canadian productions to any great extent, comparatively small quantities of sulphite and mechanical pulp and newsprint going to the United Kingdom, although the trade has lately increased. The probabilities are that with reduced quantities imported from all sources, the British newspapers and magazines will decrease the size of their sheets.

There is an excellent demand for newsprint, especially on export account. For the month of November, the last period for which the figures are available, the exports were of the value of $1,753,013, the highest on record, the greater part of the total going to the United States.

St. John Prices Continue Strong

St. John, N. B., February 21st; (Special to the Canada Lumberman):—The lumber trade so far as export is concerned, remains in about as healthy a position as at last writing. The one great bugbear, so much talked about, the freighting question, remains in a very unique position, namely: freights climbing, and no bottoms to take up the increased offerings. 250 shillings is now an ordinary price paid per standard on deals for summer shipment. Very few charters are being made, not because of the rate, but on account of the limited offerings. Prices of English deals from this port for next season's cut are said to have reached the height expected of $20 per M. for specifications running ½ 3 x 7 and 8, ½ 3 x 9 and 11, with scantlings at usual reductions; this is the highest price ever paid at St. John for a mill cut. Not all buyers, however, are offering any such figure, and those doing so are felt to be taking extreme risks. All deals have been sold ahead, and now it only remains for the logs to come forward to start the season's operation. It is to be hoped that the year 1916 may be more lucrative, so far as profit making is concerned, than was the year just passed.

The New England spruce market still shows a strong upward movement, and has reached a firm base of $27 per M. on 2 x 8 and down, 20 ft. and down, delivered. The one great trouble is now to get the stocks, as the mills are largely tied up, and only a few winter mills are in motion. These are doing well so far as price is concerned. New York prices, while not so good as New England, are in a good strong position. Building trades both at New York and throughout New England have been moving along at a good pace. The last few days of more wintry weather will no doubt have their effect, but as soon as warmer conditions arrive a spurt will again take place.

Laths are firm in New York at $4.50, and interior points, reached

Established 1894 ***Incorporated 1908***

Campbellton, New Brunswick

only by rail, are paying $4.75 per M. About all the laths from St. John, some eight million, are now afloat. It is to be hoped that this will not have any weakening tendency on the market when they arrive, but it should not, when it is considered that this is a complete clean up.

Shingles have taken an advance of 25c. per M. during the last two weeks all over the New England market. It is very timely, as the shingle industry surely needs an upward movement. It has been practically unprofitable to cut shingles at prices prevailing during the past year.

Logging conditions are good all over the province, and work is well along everywhere, but at least three weeks is yet needed before jobbers will be finished. On the head waters of the St. John, conditions have been good all winter, and all that will be needed is plenty of rain to bring out the drives when the right time comes.

All the mills at St. John are now idle, and it will be well towards April 1st before they start operations. Local conditions for building and factory and yard deliveries are the worst they have been in years and the outlook for building trade does not look encouraging. Should the war take a decided turn for the better confidence would be restored and people would become active in all lines, and again aggressive.

Great Ship-Building Activity in Nova Scotia

Parrsboro, N. S., February 17th: (Special to the Canada Lumberman):—The great war and the consequent scarcity of merchant vessels have caused a partial revival of the wooden ship-building in this vicinity. Shipyards which have been idle and silent for years are once more scenes of activity and are ringing to the sounds of the axe and the caulker's mallet.

G. M. Cochran, of Port Greville, who built one schooner last year, has now three vessels in course of constructioon. One of them, a three-masted schooner of over 400 tons register, is nearing completion, and will be launched in April. Another, a vessel that will register above 500 tons, is in frame and well advanced. She will be rigged as a four-masted schooner, and will be commanded and partly owned by Captain Tower, who was master of the ill-fated four-masted schooner L. C. Tower which was torpedoed last summer on her maiden voyage when within a short distance of the English coast. The frame for the third vessel—a trim schooner of between 400 and 500 tons register—is being prepared, and she will be completed as rapidly as possible after the others are out of the way.

H. Eldenkin & Co., also of Port Greville, are adding to their fleet a tern schooner of about 400 tons register, and Captain T. K. Bentley, who had one schooner in the deal trade last season, is building a 400 ton vessel at West Advocate. There is strong talk of building a schooner of about the same dimensions at this town, but arrangements are not yet completed. Many fine ships have been built at Passboro, but none has been launched here for nearly six years. If the vessel now under consideration is built it is probable that several others will follow.

The cost of building vessels—and particularly of their outfits—is much greater than it was a few years ago, but, on the other hand, the inducements to build far exceed any ever offered before. Two or three years ago forty shillings per standard was thought a good freight on deals to the United Kingdom. This season it is reported that two Passboro schooners have already been chartered at two hundred and forty shillings per standard. Small wonder then, that ship-building has revived, and that builders are induced to pay exorbitant prices—prices which under normal conditions would be prohibition—for the required materials. And it is not on ship-building alone that our lumber dealers are depending for transportation of their output. J. N. Pugsley, one of our leading lumbermen, has recently purchased two tern schooners registering about 350 tons each, at just double the price they could have been bought for a year ago. In fact every available vessel has been snapped up at a record price, and a sharp lookout is being kept for every possible freighter. Whether enough bottoms can be secured to carry the season's lumber output remains to be seen, but every effort is being made to obtain carriers, and there is no doubt that freight rates will soar far above all previous records.

Further Price Advances at Liverpool

Alfred Dobel & Co., Liverpool, in their monthly timber market report, under date of February 1st, says:—Deliveries are still being held up as a result of the curtailed railway facilities, and it is consequently difficult to gauge the actual consumption, but it is accepted as being generally satisfactory. Lighter imports and the continued rise in freight rates have caused a further general advance in prices and the possibility that the importation of some items will be prohibited in the near future has caused an advance in the values of these quite beyond that resulting from light imports and advanced freight rates.

Canadian woods—Waney board and square pine was in limited request. Oak—No change. Rock elm—The stock is practically exhausted. Birch—Logs—There was an improved consumption. Planks—The arrivals were very light. A good demand prevailed and stocks have been further reduced. Pine deals and boards—The arrivals, which were nominal, met a steady consumption. New Brunswick and Nova Scotia spruce deals—As compared with the corresponding month last year the import and consumption are both favorable—the former being less by 1,495 standards and the latter more by 2,740 standards. The combined stocks stand 24,120 standards, which still remains misleading owing to transport difficulties.

Liverpool and Manchester Stocks

The following report upon Liverpool and Manchester Stocks for the month ending January 31st, is furnished by H. W. Lightburne & Co., Liverpool, and their St. John, N. B., representatives John E. Moore & Co., Ltd.:—

Pulp, Paper and Lumber in Sault Ste Marie District

United States Consul Shotts, Sault Ste. Marie, Ont., in a report to his government, says:—

The harvesting of pulp wood and the manufacture of the same into pulp and paper constitute one of the largest business interests in the Sault Ste. Marie district, employing many thousand people. There are three pulp and paper mills in this district, all owned and controlled by the Spanish River Pulp & Paper Mills (Ltd.), but each operating and shipping the product under its original name. The combined output of these mills in 1915, as reported by the company, was: Newsprint paper, 114,774 net tons; sulphite pulp, 36,307 net tons, and ground wood pulp, 90,715 net tons.

The manufacturing capacity of these mills is over one-fourth of the combined capacity of all paper mills in the Dominion of Canada. They have the exclusive right to cut pulp wood on over 6,000 square miles of territory, and in addition have practically a monopoly of much surrounding territory. The harvest of pulp wood in this district for 1915 was approximately 223,000 cords, of which 41,400 cords were shipped to the United States. The approximate cut for 1914 was 144,000 cords, of which 18,000 cords were shipped to the United States.

The lumbering interests were unusually active during the year. The demand was light and prices high for the last half, the result being that the quantity of lumber left standing over on the docks is not so large as usual. The cut of lumber in this district for 1915 was approximately 187,000,000 feet, of which 186,000,000 feet were shipped to the United States.

Plans for Farm Houses

Following up their policy of publishing a series of bulletins for promoting the use of lumber in the Prairie Provinces, the Forest Service of B. C. have issued bulletin No. 10, entitled "Farm Houses." The bulletin contains plans and specifications for six different houses suitable for farmers, varying from a small one-storey house, designed for a new settler, to a large comfortable and attractive home for the prosperous farmer. These plans have been prepared by men who are thoroughly in touch with the requirements of farmers and the result is a series which will appeal immediately and will unquestionably result in improving the Prairie Province market for B. C. timber and lumber.

Glasgow Trade in 1915

Cant & Kemp, Glasgow, Scotland, in their annual timber market report say:—The Timber Trade during 1915 has been without precedent. The year began with a great increase in freights, and many buyers felt timid about paying the prices demanded, as they feared the rates would not be maintained. We have only to look at the freight rates quoted today to see how entirely wrong such fears were. Freights are now in most cases more than double those current in the early months of the year, and further increases are being constantly demanded. The consumption all round has been good, although the demand from the Shipbuilding Industry has been smaller than usual, on account of the class of vessels under construction not calling for the same quantities of timber. Spruce has been in strong demand for box-making, etc. Owing to the curtailed imports from the Baltic, large quantities have been imported from Canada and the Lower Ports. Hardwoods and fancy woods of the lower grades particularly have met with a steady sale, and stocks are low.

Shipbuilders have experienced a trying year. The demand from the Admiralty has been great, and most of the yards are almost wholly controlled by the Government. During the year the output of new steamers for merchant service on the Clyde has been 126 vessels, measuring 215,060 tons, as against 307 vessels, measuring 460,258 tons for 1914, being a decrease of 181 vessels, measuring 245,198 tons for the year. Shipbuilders have also a difficult problem to solve in the delivering of steamers contracted for before the war, owing to the great advance in wages and materials, and unless war prices are obtainable serious losses must ensue. It is, however, some satisfaction to know that already enquiries are being made for large liners, as well as other classes of steamers, which would appear to indicate good trade after the war.

The housebuilding trade has had another year of depression, ordinary building operations being almost at a standstill, the high cost of wages and materials rendering such work unprofitable.

The waginbuilding trade has been well employed, largely with war work,—the wood consumed being large quantities of wagon oak planks, ash, hickory, etc., in the making of transport and other wagons, while much of the ordinary work is at a standstill at present, for both home and foreign buyers.

The cabinetmaking industry has suffered from the war, particularly in high-class furniture, although an active demand for the cheaper qualities is reported, largely due to the high wages earned by the workmen.

It is difficult to anticipate for the coming year, as so much depends upon the duration of the war, but so long as the high freights continue, and the large Government orders come on the market, it is reasonable to suppose that the present values will be maintained—at least while the war lasts. We have luckily been very free from any serious labor troubles or financial difficulties during the year, and it is hoped that this satisfactory state of affairs may continue.

Quebec Yellow Pine Waney Boardwood.—The stock is moderate. The demand has chiefly been for parcels suitable for war work, for which high prices have been obtained.

Quebec Red Pine.—There are no logs in stock and only a small quantity of deals on hand. The demand is limited with firm prices.

Quebec Oak.—The stock is greatly reduced. The import has not been heavy, with a moderate enquiry. Quotations are very firm.

Quebec Elm.—The stock is very similar to last year. Values have considerably advanced and are still likely to increase.

Ash.—The stock is considerable, and consists chiefly of States wood. Prices are high, and may be quoted from 4/ upwards per cubic foot, for fresh parcels of logs, according to quality and specification, and from 3/ to 5/6 per cubic foot for planks and boards, according to quality and specification.

Birch.—The stock of logs is much reduced from last year. The stock of planks and boards is also considerably lower. There has been a good demand for special specifications, and prices are firm. Quotations are, logs:—2s. 9d. to 3s. 3d. Planks, 2s. 9d. to 3s. 3d., all per cubic foot.

Quebec Yellow Pine Deals, etc.—The stocks are moderate. The import has been on a small scale. The demand, however, is not very great, and the stocks on hand may probably be ample for the market's requirements. Prices are firm, and may be quoted as follows:—Firsts—Broads, 5s. 6d. to 6s.; regulars, 5s. to 5s. 6d.; undersized, 4s. to 4s. 3d. Seconds—Broads and regulars, 3s. 10d. to 4s 3d.; undersized, 2s. 1d. to 3 s. 1d. Thirds—Broads and regulars, 2s. 11d. to 3s. 3d; undersized, 2s. 4d. to 2s. 7d. Fourths—Broads and regulars, 2s. 4d. to 2s. 7d.; undersized, 2s. to 2s. 3d. Good sidings, 4s. to 5s. 6d. all per cubic foot, according to specifications. The demand for Californian and Siberian pine deals and sidings is very limited.

Quebec Spruce Deals.—The stock is considerably heavier than at this time last year, while there has been an unprecedented demand,

EDGINGS

Ontario

The Northumberland Paper & Electric Co., Campbellford, Ont., recently lost their paper mill, etc., by fire. The amount of the loss is not known, but it is well insured.

The Colonial Lumber Company, Pembroke, Ont., have made extensive improvements to their equipment during the winter, having installed a quantity of new machinery and increased the capacity of their mill considerably, as well as replacing the burner which collapsed some weeks ago.

Mr. J. E. Beechler has completed the plant of the Goderich Lumber and Milling Company at Goderich, Ont., and it is now ready for operation. The plant includes all modern improvements and will give employment to about sixty men. Mr. Baechler reports that he now has extensive orders on hand for 1916.

A report from Rainy River, Ont., states that the Rat Portage Lumber Company have sold their old mill site property to the T. M. Partridge Cedar Company, of Baudette, and that the Partridge Company intend moving their business to Rainy River this winter. The company will employ about twenty men during the greater part of the year.

Mr. A. G. McIntyre, 706 Traders Bank Building, Toronto, who recently resigned from the position of manager of the Bathurst Lumber Company's pulp and paper plant in order to accept the position of general manager of the Mattagami Pulp and Paper Company, Limited, whose plant is to be located at Smooth Rock Falls, Ont., states that building operations will commence at once, that the plant will turn out 75 tons of bleached sulphite per day and is expected to be ready for operation in June, 1917. The company intend to erect a model town at Smooth Rock Falls for the housing of their employees. They have already commenced to instal a portable sawmill with which they will take out the timber and lumber required in connection with the building of their plant. Subsequently they will put in a band-saw mill with a capacity of about 30,000 feet per day.

Eastern Canada

Jos. Boule is starting work at once on a sawmill at Loretteville, P. Q. The cost of the mill will be $10,000.

P. E. Bourassa & Son, 1495 Notre Dame East, Montreal, P. Q., are making alterations to their planing mill at a cost of $3,000.

The Nouvelle Lumber Company, Boston, Mass., contemplate making several changes in their mill at St. Omer, P. Q., during the coming summer.

Haley & Son, St. Stephen, N. B., recently lost their box mill at Calais. Maine, by fire. The loss amounted to $5,000 which was covered by insurance.

The contract for the supply of elm and maple timber and hemlock railway ties for the Montreal Habor Board has been awarded to Mr. W. H. Kelly, Buckingham, P. Q.

The St. Maurice Lumber Company, Three Rivers, P. Q., expect to commence work during the coming spring upon the construction of a telephone line in their limits between Hervey Junction and La Tuque, along the line of the Transcontinental railroad.

The Miner Lumber Company, Limited, recently incorporated, have opened an office in the Coristine Building, Montreal, as wholesale lumber dealers. A mill is under construction at Rawdon, P. Q.

The mill at Lumsden Mills, Quebec, owned by Mr. John Lumsden, has recently been altered so as to increase its capacity over 60 per cent. A twin circular has been put in and two new water wheels added, made by Chas. Barber & Sons of Meaford, Ont.

The International Land and Lumber Company, Limited, Ottawa, Ont., who own about 300 square miles of spruce limits in the neighborhood of Lake St. John, P. Q., intend, it is reported, to erect a sawmill and a pulp mill as soon as the necessary capital can be obtained.

The Richards Manufacturing Company, whose lumber mill at Kedgwick, N. B., was destroyed by fire on February 22nd, will rebuild immediately. Plans have been prepared by R. McLean. The equipment of the plant will include three new shingle machines. The building will be 33 x 60 feet, frame construction and fireproof roofing.

The South West Boom Company, operating on the south west branch of the Miramichi River, N. B., are asking the local legislature for an extension of their charter for a further term of twenty years; also for permission to increase their boomage charge by 10c. per thousand superficial feet and to provide for an increase in their capital stock.

At a meeting of the creditors of the Tobin Manufacturing Company, held in Sherbrooke, P. Q., under voluntary liquidation, Mr. John W. Quinn, of Windsor Mills, P. Q., was appointed liquidator, with the following advisory committee of creditors:—Messrs. J. A. Begin, Montreal; W. H. Mitchell, Lot-

biniere Lumber Company; J. A. Bothwell, Brompton Pulp & Paper Company, East Angus; P. Pare, G. A. Grier & Sons, Limited, Montreal, and Arthur H. Campbell, Campbell-McLaurin Lumber Company, Ltd., Montreal.

Messrs. Murray and Gregory, Limited, of St. John, N.B., are erecting another new mill at Lac de Frontiere, in their Quebec limits. This is now the last station on the new extension of the Quebec Central. This new mill will have a capacity of about 50,000 feet per day of long lumber and 30,000 to 35,000 laths, besides shingles. Rossers for rossing pulpwood are also being installed in the plant, as they also get out considerable quantities of pulpwood each year. It is hoped to have this mill in operation by June 1st. Their mill at St. Camille, Quebec, on the same railway, is running on its second year, having run night and day through the past year. Mr. J. Fraser Gregory, president of the company, has just returned from Quebec, and reports everything going favorably.

Western Canada

The Schreiber Fuel and Lumber Co. Ltd., Winnipeg, Man., have been incorporated.

The Shull Shingle and Manufacturing Company's plant on the North Arm, Vancouver, B. C., started operations during the last week of February.

The Western Pine Lumber Company, Grand Forks, B. C., expect to start operations again shortly, having some 6,500,000 feet of logs at the mill ready for sawing.

The Spruce and Cedar Mills, Limited, has been incorporated with head office at Vancouver, B. C., and capital stock of $10,000, to carry on business as timber merchants, sawmill proprietors, etc.

The Brunette Saw Mills, Limited, New Westminster, B. C., which had not been operating this year, with the exception of the box factory, commenced running during the third week in February.

The Montreal Trust Company have been appointed permanent liquidators for the Sprague Lumber Company, Winnipeg, Man. The Montreal Trust Company have already been acting as provisional liquidators.

The Vancouver Creosoting Company, Limited, has been incorporated with head office at Vancouver, B. C., and capital stock of $300,000, to carry on business as manufacturers and dealers in lumber, timber, shingles, lath, sash, doors, portable houses, boxes, also as sawmill owners and as general lumber and timber merchants.

The Canyon Shingle Company, Limited, has been incorporated with head office at Vancouver, B. C., and capital stock of $10,000, to take over the shingle and lumber business carried on and owned by Fred A. Johnston and T. L. Taylor, of West Vancouver.

At Eagle River, 32 miles west of Revelstoke, B. C., on the main line of the C. P. R., a shingle plant has been erected by E. D. Mayhue. The plant has dry shed capacity for three million shingles, and Mr. Mayhue reports a good demand for his output.

Cook's mill, between Dennison and Mount Lehman, B. C., was considerably damaged recently by an extensive cave-in of the roof on account of the heavy accumulation of snow. Much of the machinery, including grinders, planers and saws was seriously injured.

Work on the property recently purchased by the Vancouver Creosote Company at North Vancouver, B. C., is to be commenced at once. Orders calling for 1,250,000 gallons of creosote early in May are expected to be filled according to contract. The company will have a subscribed capital of $300,000. The plant and property are estimated to cost about $200,000.

The Montreal Chambre de Commerce has appointed the following as members of the mines, woods and forests committee: Messrs. Frank Pauze, Leon Gagne, Rod Tourville, J. H. Dansereau, J. A. Laferte, J. T. Armand, J. P. Dupuis, Thos. Prefontaine, and E. Oullette.

In 1913, 13,220,132 superficial feet of hewn timber was imported into New Zealand and 33,688,145 superficial feet of sawn timber, valued respectively at $793,677, and $1,492,419. In 1914 only 8,482,099 superficial feet of hewn timber and 30,085,970 superficial feet of sawn timber were imported, valued respectively at $531,297 and $1,251,780.

A disastrous fire occurred at the mills of the Riverside Lumber Company, McGillivary, B. C., Mr. A. Sereth, Calgary, Alta., stated to the press of Calgary, that the fire did serious damage which is only partially covered with insurance. Their big mill, with a daily capacity of 100,000 feet of lumber and which cost $65,000, was destroyed. This is one of the largest sawmills in the Crows Nest Pass. In addition about $3,000 worth of lumber was burned. Saw logs totalling about 20,000,000 feet were in the water ready for the saws, but were saved. The company will commence rebuilding at once and will probably be sawing by early Spring. The Riverside Lumber Company also own a large mill at Calgary, Alta., at which point Mr. A. Sereth is manager.

The Lessons of Service	INCREASED SALES SATISFIED CUSTOMERS REPEAT ORDERS NEW BUSINESS MORE PROFIT

A picture which contains lessons to lumber dealers. By the National Lumber Manufacturers' Association, Trade Expansion Department, Chicago, Ill.

W. T. Culver, Vice President and General Manager of the Stearns Salt & Lumber Co. of Ludington, Mich., was elected President of The Michigan Manufacturers' Association at their annual meeting held in Detroit during the week of February 17th. With Mr. Culver's election a vigorous policy will be adopted along many lines of effort and the Association will undoubtedly become a greater force in the industrial world than ever before. This organization comprises in its membership the greater number of the progressive manufacturers of the State and has made its influence felt in every movement having for its object the betterment of the conditions of employers and employees.

W. R. Stuart, head of the Stuart Lumber Company, Calgary, Alta., died recently at his home. The late Mr. Stuart was one of Calgary's leading business and financial men. He had resided in Calgary for 23 years, all of which he spent in the lumbering business.

Mr. A. C. Hastings, president of the American Writing Paper Company, in a recent statement, said that the United States was now facing the greatest general paper famine in its history. Stocks in the hands of jobbers are low; imports from all countries except Canada have been cut off and exports are greater than ever.

Prices are lower than those of all other manufacturers. Letter orders receive prompt attention.

A. H. Johnson, Wholesale Druggist, **Collingwood, Ont.**

Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

W. W. Cory,

Deputy Minister.

Department of the Interior, Ottawa,
December 20th, 1912.

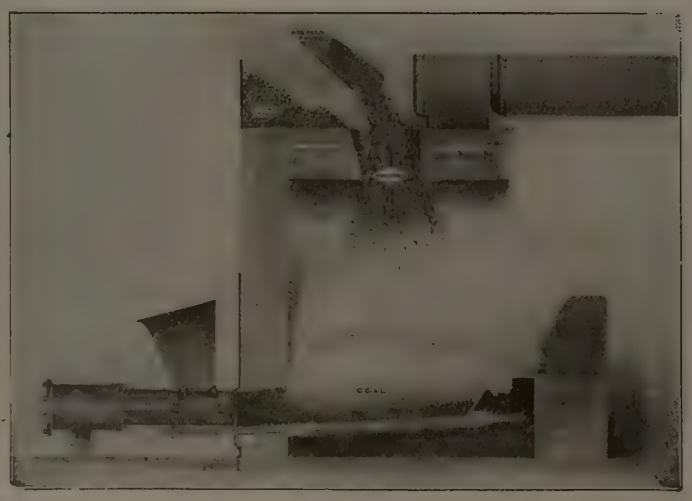
Make Steam and Dollars From Your Refuse



Arrangement of Jones Underfeed Stokers in Dutch Oven for burning paper mill refuse in conjunction with coal.

Burn your saw mill and paper mill refuse in our special Jones Underfeed Stoker Dutch Oven and increase your profits.

Our stokers are installed in many of the most modern pulp and paper mills throughout Canada and the United States using a system combining the burning of mill refuse in conjunction with a small proportion of coal and are giving excellent results. If you have refuse to dispose of or if you depend on coal alone to fire your boilers the addition of a Jones Underfeed Stoker will make an enormous cut in your costs for steam.

"The Saws with a Temper"

Labor Saved Is Time Saved

When to this is added increased durability we have the economy that naturally results from larger output and long service.

These are some of the strong points in favor of

Disston Cross-Cut Saws

They are ground to a true taper all the way from cutting edge to an extra thin back. Being ground on lines that conform exactly to the breast of the saw, the blade is absolutely uniform in thickness throughout the entire length of the cutting edge. This special method of grinding gives the maximum amount of clearance with the minimum amount of set, without sacrificing elasticity and stiffness. You know that all these points are good points, and substantiate our claim that Disston Cross-cut saws are unexcelled.

You will find a lot of valuable information in our Cross-Cut Saw Booklet. Sent free on request

"Wilson Bros." Hardwood Flooring

is the Flooring that is manufactured expressly to supply the demand for the best. It is made by modern machinery from carefully selected stock, and every precaution is taken throughout our entire system to make it fulfil the requirements in every particular. Write us for prices.

Wilson Bros., Limited - Collingwood, Ont.

The Three Goodhue Belts

"EXTRA" "STANDARD" "ACME WATERPROOF"

These three brands are made for three different services and each brand is the best quality made from selected hides with the stretch taken out.

"Goodhue Belts" stretch less than any other belt by 15 to 25 per cent. This quality effects a great saving because it is unnecessary to be continually shortening the belt to keep it taut.

"Acme Waterproof" brand is made for the wet places in a mill and will give a remarkable service under the most trying conditions.

When you buy a belt—buy a Goodhue. Prices and particulars on request.

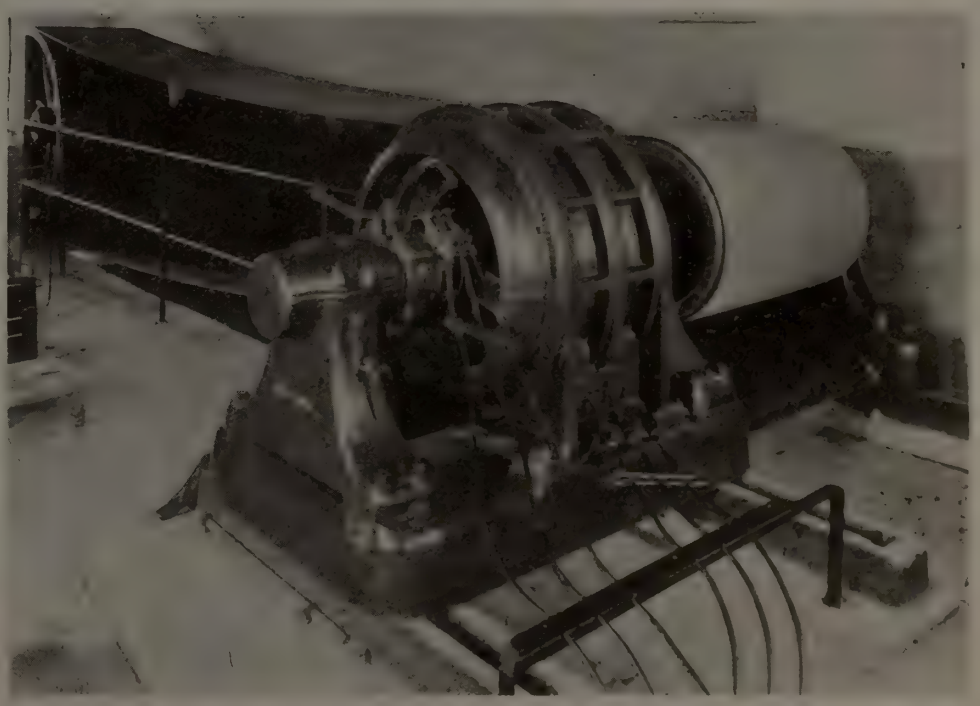
Leviathan or Anaconda

Belts do not stretch, there is no upkeep cost or loss of production by having to shut down to take up the belt.

This belt drives a line shaft that has fourteen dry pans; all these dry pans are equipped with 16" x 8-ply LEVIATHAN belting. There is no other brick plant in Canada or the United States that has fourteen dry pans on one line shaft.

Another ANACONDA 48" x 10-ply in this same plant replaced triple leather that was only in service two years. The upkeep cost of that leather belt was so expensive that they replaced it with ANACONDA.

Are you willing, is your Power Department willing to stop thinking of belting in terms of material and consider it in the light of power delivered, strength, tractive qualities, economy of upkeep, length of life, and after these are considered, cost of installation?



The above photograph is 75 ft. x 48 in. x 10-ply Leviathan belt installed at St. Lawrence Brick Co., Limited, La Prairie, August, 1914.

The motor is a Canadian General Electric 500 H., 3 Phase, 60 Cycle, 2300 volts, 600 R.P.M. The joint is made with ¾ in. Indian Tan Lacing, what is known as a hinge joint. The belt has never been taken up or relaced since it was installed, August, 1914, over one year's service.

Increase Your Selling Efficiency

THE efficiency of your selling organization can be substantially increased by a closer knowledge of constructional work proposed, or in progress.

The "Contracts Department" of the Contract Record & Engineering Review gives you this information every week in concrete form, while the "Tender" ads published in this paper frequently call for bids on lumber, timber and interior finish. The news and editorial columns report progress on all building and engineering work. Descriptions of all important work are accompanied by illustrations.

Manufacturers of structural timbers, lumber, shingles, doors, flooring and interior finish desiring to interest architects or engineers, or to sell direct to contractors, should reach them through the advertising columns of the Contract Record & Engineering Review.

Subscription price $2.00 a year.

Write for specinen copy.

FIRE BRICK

On a Quality Basis

Use as much care in its selection as you would in choosing the lumber that goes into your products.

No brick gives the best results for every purpose. The brick you would use for your refuse burner may not give you the best results for your Dutch Oven.

We Manufacture the Following Well Known Brands

"Elkco," "Elk Steel," "St Marys," "Keystone" and "Rotex"

When sending us your inquiries, specify for what purpose you need the brick.

We Make a Specialty of

REFUSE BURNERS, BOILER SETTINGS, KILNS, DUTCH OVENS, ETC.

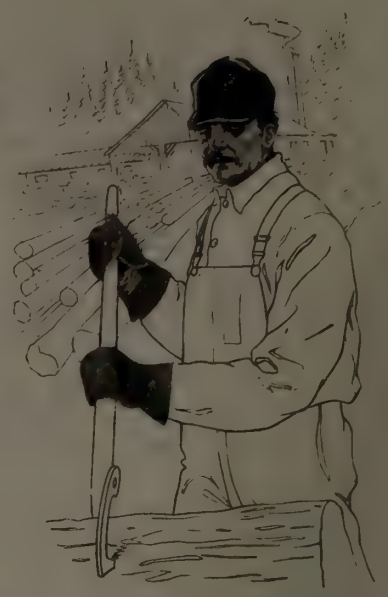
Catalog sent upon request.

Elk Fire Brick Co. of Canada, Limited

HIGH GRADE FIRE BRICK and CLAY

Federal Life Bldg., Hamilton, Canada

Canada Lumbermen



Have learned from experience that "ASBESTOL" Gloves and Mittens serve their purpose better than any other work gloves on the market.

Made from the best selected leather,

EISENDRATH'S Celebrated Horse Hide,

by skilled workmen, these famous work gloves and mittens are proof against the effects of heat, steam and water.

Make sure of the "ASBESTOL" trade-mark the next time you buy work gloves. Most good dealers know "ASBESTOL" and carry the line.

Eisendrath Glove Company

2001 Elston Ave. CHICAGO, ILL.

Made in U. S. A.

Logging Locomotives

Made in Canada

Our fifty years' experience in the design and manufacture of logging locomotives is at your disposal. Many of the largest logging operators in Canada are using our "Canadian Made" locomotives.

Our logging models are as carefully designed and built as our 200 ton sizes—oil or coal burning.

MAY WE SEND YOU SPECIFICATIONS?

This engine is 13½ ins. x 18 ins. and weighs 35 tons.

LOGGING LOCOMOTIVES

The designs of our Logging locomotives are the result of wide experience, extending over a period of 80 years.

The material used in their construction is thoroughly tested and is the best of its kind.

All details are accurately finished to standard gauges and are absolutely interchangeable on all locomotives of the same class and size.

This cuts out long delays at critical times of the work, as parts liable to wear can be kept on hand or shipped promptly from our works.

MONTREAL LOCOMOTIVE WORKS, LIMITED,

A Test In Your Workshop

will convince you of this fact:

That it is cheaper to use two files where you now use only one.

Take a certain piece of work and give one man a new file, and another a half worn file on a similar piece of work.

The man with the new file is doing what you are paying him for. The other man is filing away your time.

The man with the new file takes a pride in his work.

The man with the old file starts with a grouch, and the work suffers.

When the inefficient point in the files is reached it is good policy for you to have your men discard them.

And they should be replaced with the five famous brands:

KEARNEY & FOOT
GREAT WESTERN
AMERICAN
ARCADE
GLOBE
(Made In Canada)

Made in Canada by a plant controlling 90% of the file business.

Backed by 50 years' experience in the making of efficient files.

Send for your FREE copy of "File Filosophy" NOW.

Port Hope, Ontario

DEALERS EVERYWHERE.

Plymouth Cordage Stands The Test

These men are testing a piece of 2½" (dia.) Plymouth Manila Rope. It has just withstood a 45,000-pound strain, though sold to hold but 43,000.

If this surplus strength were an isolated case, it would mean little. But Plymouth Cordage in general tests "higher than card." The instance cited here is typical.

This is an important fact, for it means that whenever you buy Plymouth you secure cordage that offers a comfortable margin of safety.

Because of this margin of safety—this surplus strength—Plymouth stands up under the most severe strains of service where other kinds fall down.

And since much the same factors which make a rope strong make it durable as well, Plymouth's length of service is as superior as its strength.

Actual service is the real test and proof of the superiority of Plymouth Cordage, and that is the test we ask you to put it to.

Lath Machine and Bolter

This machine is a combination of our No. 2 Bolter and No. 2 Lath Machine mounted in a single frame. The lath machine is made the opposite hand to our single machine. The illustration shows the bolter side of the combination. In mills where the floor space is limited and the output must be large this machine is an ideal combination. The details of construction found in our No. 2 Lath Mill and No. 2 Bolter apply to the combined machine.

When you overhaul your mill get in touch with us about new equipment.

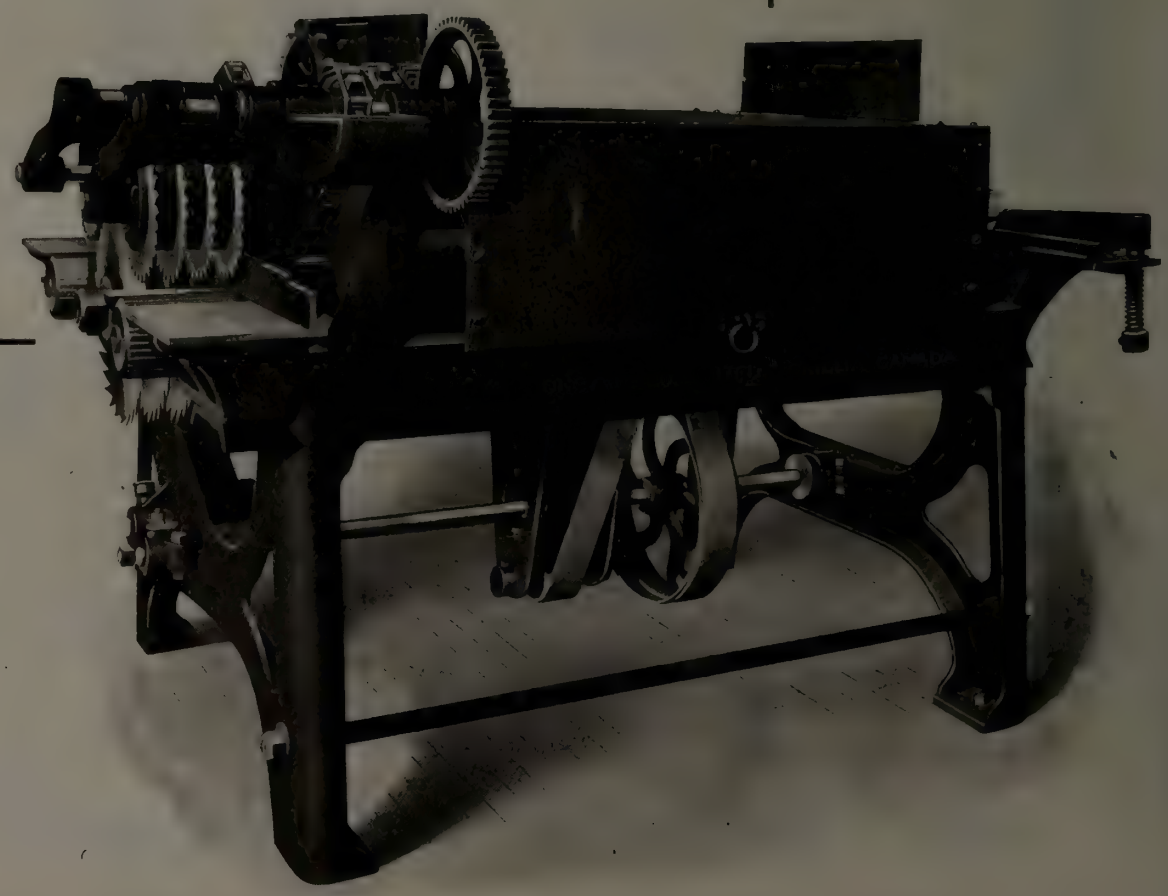
Orillia - Ontario



If Your Mill Capacity is not More Than 60,000 ft. a day

For Best Results

Use

WATEROUS STEEL GIRDER CARRIAGES

For medium power mills Waterous Steel Girder Carriages have no superior. They are built with knee opening of from 30″ to 50″ and are adapted for Band or Circular Mills and for Steam or Rope Feed.

They are turned out with exceptional care. A sturdy, well put together frame, knees and log-seats of great strength, with dogs, setworks and accessories identical to those supplied on the heaviest carriages built in our shops.

A good many hundred of them are in use.

Improvements That Count

Combination Setworks.—Setworks and receder combined in one machine, operation by two levers only. Will set by 1/32 of an inch up to 3″ for one throw of lever. Cannot develop lost motion. The strongest, quickest acting setworks in use.

Non-breakable Headblocks.—Knees extra high, extra long, extra heavy. Provided with cushioned, self-aligning 4″ taper set. Log seats of heavy steel girders, with wide nigger nose, centre and rear castings. Fitted with steel facing strips, reversible when worn.

Sure-grip Dogs—that will handle logs, both large and small, square cants and the last 1″ board safely, certainly and rapidly. Strength and toughness are obtained by proper selection of materials and careful workmanship.

Double Axles under each logseat. Wheels of extra large diameter, of cast iron; tracks, heavy section of steel—the metal on metal wear reduced to a minimum. Bearing surfaces everywhere much larger than is usual practice.

You can add a good many thousand feet to your daily cut and saw lumber of better quality by handling your logs on a Waterous Carriage.

Bulletin No. 111 on request.

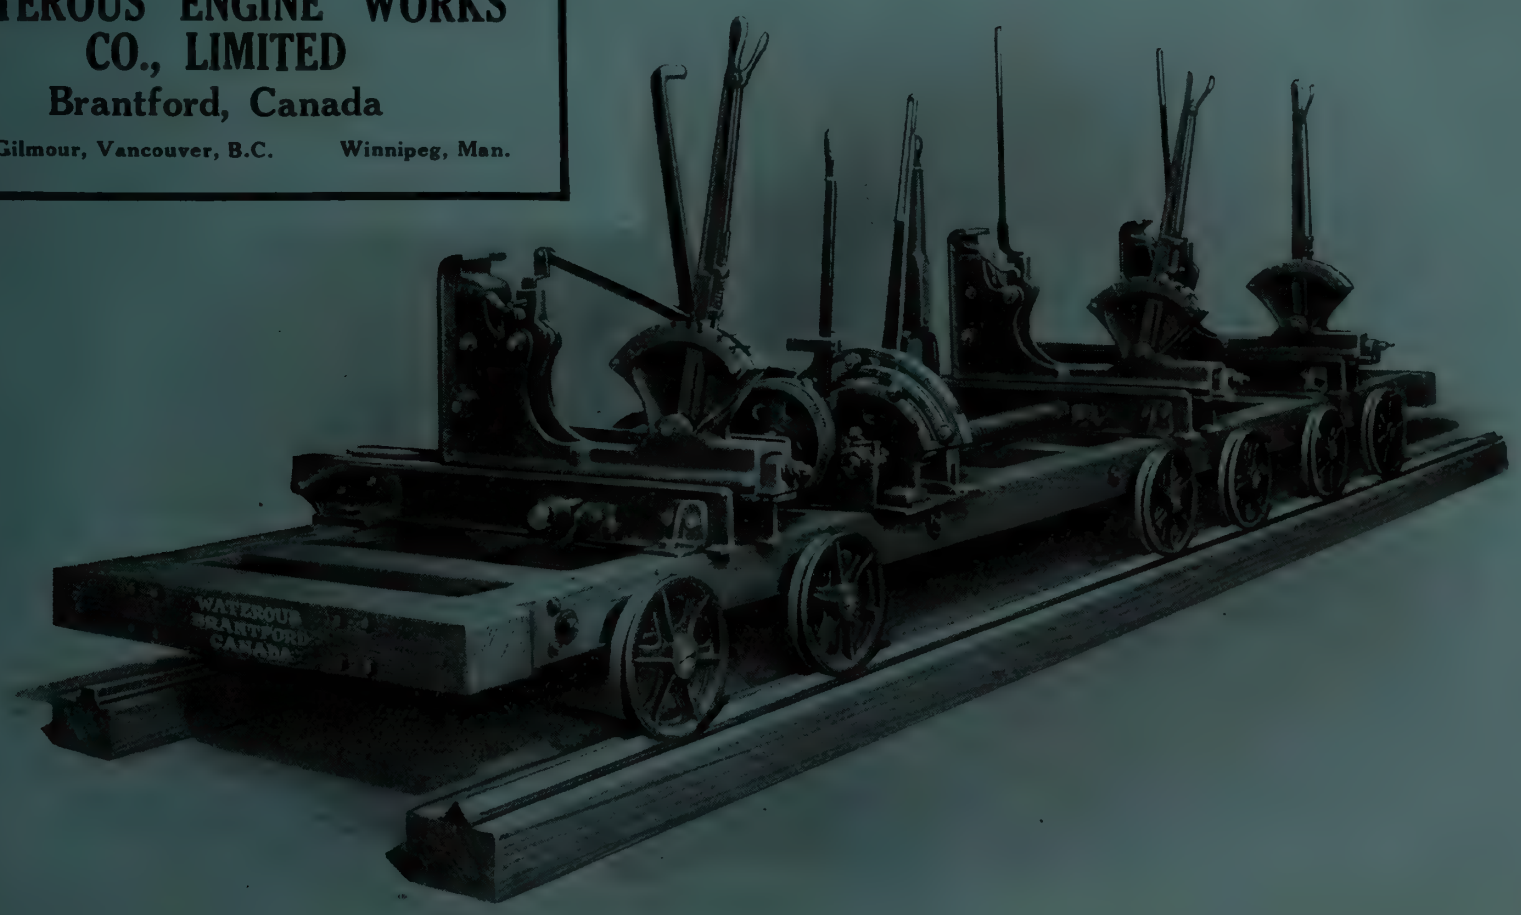
H. B. Gilmour, Vancouver, B.C. Winnipeg, Man.



$5,000,000.00
worth of mixed metal sold annually.

"FROST KING" METAL

Our thirty-five years experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 30c per lb., Fort William and East; West of Fort William 35c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our FAULTLESS BABBITT will stand where all other metals will fail. Price, Fort William and East, 40c per lb.; West of Fort William, 45c, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

FOR SALE: Machinery and Timber

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the town of Parry Sound, Ont.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Special bargains in the townships of Burpee, Falconbridge and Street for small mills.

We have the following Sawmill Machinery for sale:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

All of the above open for inspection at Parry Sound.

The Parry Sound Lumber Co., Limited,

26 Ernest Ave. Toronto, Can.

To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

are buying

ARKANSAS SOFT PINE

More than likely, you are one of them.

But even so, does your own trade know it? Remember that a great many persons right in your own community know a good deal about Arkansas Soft Pine already. In fact, they are half sold on it Today.

Don't overlook your main chance. Tell your customers, present and future, that you are agent for the famous

Nationally Advertised

Satin-Like Interior Trim

In other words, couple your own local merchandising with our National advertising. By so doing, you secure the benefit of a ready-to-wear interest in the wood you sell.

Arkansas Soft Pine is known in your town as a particularly good wood for white enamel and other finishes.

What are you doing to let the people know that you sell that identical wood? Don't overlook the important factor that when a man really wants a thing, cost is a secondary consideration.

Seriously, Mr. Dealer, this is your opportunity.

DUNLOP

Some Facts Concerning "Dunlop"

The story back of the "Two Hands" trade-mark—the phenomenal expansion of the business, the widespread character of the demand—will appeal to every Canadian from the Atlantic to the Pacific.

* * *

While the name "Dunlop" in every part of the civilized world is associated with tires, the Dunlop Company manufactures practically everything compounded of rubber, and has a special experimental department devoted to the perfecting of established lines and to the creating of new ones.

* * *

The Dunlop Company is a thoroughly Canadian institution, controlled by Canadians, and financed entirely by Canadian capital. For approximately one-quarter of a century this Company has successfully carried on the business of rubber goods manufacturing.

* * *

Some conception of how the Dunlop idea, applied to general rubber-made goods, has been popularized can be gleaned from this statement:—

"The factory additions for 1912 were alone nearly as great as the entire floor area of seven years previous; and in 1915 the additions were just double those of 1912."

Though the Head Office and Factories of the Company are located in Toronto, Branches, carrying complete stocks, are situated in the following cities:—Victoria, Vancouver, Edmonton, Calgary, Saskatoon, Regina, Winnipeg, London, Hamilton, Toronto, Ottawa, Montreal, St. John, Halifax.

* * *

Following along the best established custom for obtaining the most accurate estimate of Canadian conditions, the Branch Managers of the Company, from coast to coast, assemble at the Head Office periodically, and there in conclave present their viewpoints.

* * *

Officers of the Company regularly make tours of inspection from the Atlantic to the Pacific.

* * *

Thus, while the Company is essentially Eastern, each Branch, with its efficient staff, is a connecting link with the people of the different territories, an assurance that the Dunlop business is continental in its scope and national in its character.

Dunlop Rubber Belts

A judicious selection of Main Drive Belts will cut your belt bills in half, as well as minimize mishaps from belts going wrong.

* * *

All of our best experience in belt-making is represented in **"Gibraltar Redspecial"**—a friction face, main drive belt—a radically different, most unusual belt. No service is too exacting; no condition is too abnormal; no load is too heavy for "Gibraltar." Will not dry nor rot, and is practically immune to stretching, as it is made by a process that automatically removes this evil.

* * *

Dunlop **"Gibraltar Redspecial"** (Heavy Duck) is essentially a saw or lumber mill belt. It is giving wonderful service under most abnormal conditions. Its endless fund of toughness and great tenacity make it the ideal belt when constantly exposed to the elements.

* * *

Dunlop **"Gibraltar Redspecial"** (Light Duck) will be found most efficient on woodworking or other high-speed machines.

* * *

We, also, make rubber-faced belts in any grade for main drive purposes. Two of these brands—**"Peerless"** and **"Record"** are well-known for their superior qualities.

DUNLOP TIRE & RUBBER GOODS CO., LIMITED

Head Office and Factories: TORONTO, CANADA

Branches:—Victoria, Vancouver, Edmonton, Calgary, Saskatoon, Regina, Winnipeg, London, Hamilton, Toronto, Ottawa, Montreal, St. John, Halifax.

Rubber-Made Goods

DUNLOP

Dunlop Hose

Fire Hose is a necessary adjunct to the equipment of every saw or lumber mill, because the risk of fire in these industries is very great.

* * *

Adequate and efficient fire protection is secured only through the use of reliable hose—hose that is always ready for use when necessity arises—hose that will stand the utmost power and give the greatest wear.

* * *

These are two of the main characteristics of **"Dunlop" Double Jacket and "Imperial" Solid Woven Jacket Fire Hose**—two brands that are the pride of the largest fire departments in Canada. They, also, possess straight and smooth waterways, and the weight, grade and texture of the cotton jackets are always right.

* * *

We supply other brands of Fire Hose with single or double cotton jacket or rubber cover, in any grade to suit all requirements.

* * *

In this connection we wish you to remember that we are the only rubber company in Canada authorized by the Underwriters' Laboratories, Inc., Chicago, to manufacture Fire Hose bearing their rubber label of approval.

* * *

If you use water hose you won't be satisfied with any product other than Dunlop **"Hercules"** or **"Peerless"**—two brands of hose admirably adapted for water purposes. **"Hercules"** will supply the need for an unusual hose in case of abnormal usage.

Dunlop Packings

What Dunlop **"Sunset"** (red) and **"Admiral"** (blue) Packings have done in the way of giving extra service and reducing packing costs for the Steel Companies of Nova Scotia—or for that matter, countless big industries located throughout the Dominion—they can do for you.

* * *

For many years Dunlop Packings have been doing continuous duty in some of Canada's largest steel mills where abnormal service and conditions prevail—where a packing is subjected to the severest kind of tests—where its ability to do the work efficiently is a known factor from the beginning.

* * *

Is not this fact, then, tangible evidence of the character of the Dunlop product? Does it not satisfy you that Dunlop Packings are what you need to solve the "rising up-keep cost" problem?

* * *

We realize you want service from the packings you buy and we know that Dunlop Packings can give it. Supposing, then, we get together before you order your next roll of packing.

* * *

The Dunlop trademark will also be found on Square Duck, C.B.S. and C.I. Spiral, or, in fact, on any other kind of reliable packings required.

* * *

Tell us your requirements in rubber-made goods and we will endeavor to prove to you what you really need in Belting, Hose and Packings.

THE DUNLOP LINE

Consists of High-Grade Tires for Automobile, Motor Truck, Bicycle, Motorcycle and Carriage, and High-Grade Rubber Belting, Packing, Fire Hose and General Hose, Dredge Sleeves, Mats, Tiling, Heels, Cements and General Rubber Specialties.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year in advance; other foreign countries embraced in the General Postal Union, $3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N. Y., under the Act of Congress of March 3, 1879.

Vol. 36 Toronto, March 15, 1916 No. 6

Free Trade Thrown to the Winds

One of the most revolutionary results of the war, so far as the British Empire is concerned, will be the utter uprooting of the old ideals of free trade which have been so great a factor in the political and industrial life of Great Britain. Already the chief exponents of free trade in Great Britain have thrown their former beliefs to the winds and come out definitely in favor of radical changes of fiscal policy, so as to enable the Empire, after the war, to maintain the objects for which it has been fighting and to make it impossible for Germany ever again to obtain that international industrial and commercial preponderance that has enabled her to plunge the world into war.

There is now no room for doubt that Great Britain will never again return to the position she occupied before the war as an isolated free trade nation. Her eyes have been opened to the dangers of free trade so long as there are, among others, nations like Germany that will take advantage of it to increase their strength and preparedness for war. The rulers of England today are working out the details of this problem and getting ready for the changed conditions which will follow the war. Even now, these changes are to some extent in effect. By the time the war is over, England will have much of the necessary machinery in operation, a good deal of the legislation worked out, and the public mind well prepared for the new fiscal policy.

In many ways these changes will work out to the advantage of Canada and the other overseas parts of the Empire. For Canadians the duty is to consider what this change will mean to us, and to see to how great an extent we can co-operate so as to produce, under the new conditions, the greatest advantage both to ourselves and to the Empire. The outstanding business features of the period following the war will be reconstruction and readjustment; reconstruction of the countries which have been devastated and readjustment of the business relationships and industrial activities which have been shattered by the war. A great deal of consideration has been given to the reconstruction problem. Readjustment of the business and industrial situation, however, has not been considered by the press in general to anything like the extent that it warrants.

In connection with Great Britain and Canada, and to a large extent also in connection with the allied countries and Canada, the readjustment of business relationships will be of great and vital importance. No single country in the whole world will be in the same advantageous position as Canada. When the war is over, having borne her share of the struggle she will be favored by the allied countries whenever there is a possibility of conducting trade with her. In the markets of Great Britain and France this will be a great advantage to Canadian manufacturers. It will give them the whip hand in all transactions in which Canadian goods can stand any chance at all.

Even when one looks at this question in a broad and general way he cannot fail to be convinced that of all the countries in the world, the one which will develop most rapidly and most substantially after the war will be Canada. Our agricultural and manufacturing products are nearly all of a class that will be in demand in Great Britain. France, Belgium and other European countries. Our manufacturing and producing capacity will be strained to the utmost, and those who have foreseen the situation and placed their affairs in such shape as to take part in Canada's great expansion will reap a greater harvest of business prosperity than they ever dreamed of in the days before the war.

To put the matter in as brief and simple a form as possible, Canada will, more than ever before, be the Land of Promise and the Land of Fulfillment. Her plants will be running night and day, her merchants will be busy from morn till night. Her farmers will be able to sell at good prices everything that they produce, and this prosperity will attract to the shores of Canada a great tide of immigration. From all parts of the world people will set out for Canada to share in its expansion. The immigration from the United States to Canada which started on an extensive scale only a comparatively few years ago will be renewed and greatly increased. Moreover, from the United States we will then draw not only farmers in large numbers, but a far greater number of merchants and manufacturers than we formerly drew. Manufacturers in the United States will be quick to realize that, if they want to share in the trade of Great Britain and the allied countries to the fullest extent, they must establish plans in Canada so as to be entitled to the preferential treatment which Canada will then obtain.

These are no idle dreams dictated by desire and unfounded on fact. Anyone who reads what is appearing daily in the press of Great Britain regarding the fiscal problem, knows that these views are warranted by the trend of public opinion in Great Britain. Free trade has been killed. The Manchester Chamber of Commerce, the historic hot-bed of free trade has voted against it by 998 to 527. The greatest exponents of free trade in Great Britain have thrown it overboard. From now on, every man who thinks about the fiscal problem in the Old Country will think of it in terms of tariff protection. The working out of protection will involve many differences of opinion, but the great change has come about. The war has made protection the only logical policy for Great Britain. After the war, and to a considerable extent during the war, protective tariffs will come into effect and they will unquestionably include preferential treatment for the Overseas Dominions and reciprocity between the Allied Nations.

Lumber and Timber Markets

The average lumber manufacturer, and the wholesalers and retailers to an even greater extent, are, as a rule, so closely tied up with the actual transactions involved in their daily business, that they do not give as much time as they might to a consideration of the connection between the ups and downs of the lumber market and the activity of the market for standing timber. Unfortunately, the public at large takes even a less definite interest in the connection between the timber market and the lumber market, and for this reason a great deal of misapprehension has grown up, and become accepted as fact, in regard to supplies of standing timber, and also in

regard to their ownership. One of the most interesting discussions of this matter that we have seen of late is contained in a bulletin which reached us recently from the firm of Jas. D. Lacey & Company, Timberland Factors, Portland, Ore.

Activity in the timber market, they say, follows the lumber market, halting when production is curtailed and ascending when business is active. As in the case of real estate of all kinds, speculation and buying for development ceased in 1913. Owners who were financially unprepared for the long period of depression through which the country has passed have been compelled to offer their properties at prices much below recognized values. Buyers were over-critical, uncertain as to the future and influenced by the common feeling of insecurity. Few purchases were made. Capital was not available.

Lumbermen are the principal buyers of timber. Returns from mill operations are re-invested when balances accrue, but during the year low lumber prices left no balances with which to acquire future stumpage supplies. Timber held by strong owners did not depreciate. Only a few desirable large properties were offered below former prices. Two or three makers of bonds defaulted in their payments and the security passed to the bondholders. Some operating concerns failed but the number was small considering the stress of the times and the long-continued sale of lumber at prices below the cost of production. A number of mills stopped and some remain down. In British Columbia conditions were particularly bad. Practically all the mills were stopped. The pinch of the war was felt by license holders in the province and in England. Forced liquidation brought about transfers at low figures. A tendency toward stability in the industry was shown by the erection of new producing plants in California, Oregon and Washington by well-financed companies whose organizations are capable of finding markets for their output. This is the beginning of the elimination of operators who have not developed marketing with manufacturing.

The lessons learned from the experiences of the year should be helpful. Need for co-operation and better understanding is seen by lumbermen and sentiment in favor of association work has crystalized. The West Coast Lumbermen's Association has become energized and it is proving the helpfulness of organized constructive effort. Its scope has been broadened to include timber owners, shingle men and allied industries in its membership. Timber owners have come to see that their interests are interwoven with those of manufacturers and that joint effort must be made to maintain the place and value of wood. Manufacturers have learned that unrestrained production does not increase demand and that destructive competition can bring only distress. The self-inflicted punishment has been severe; it should be sufficient for all time.

The economics of lumbering have received more thoughtful study than ever before. Forest economists—a new type of lumbermen—have been developed and their influence is being felt. They are men of vision who are able to see the things for which there is need and define the way to them. Government itself has learned from proprietors that forest ownership is not synonymous with the accumulation of unearned and undeserved increment. It has seen the error of its former attacks and it is now seeking to aid in the reconstruction of the industry. It has seen that the concentration of ownership, so alarmingly proclaimed in reports of earlier years, is essential; that lumbering is big business requiring large capital to give it stability, large-scale production to give it economy and scientific management to make it profitable. The progress of the world has loosened the grip of the lumber maker upon his business and demanded that more than mechanical ability shall be applied in its conduct. In lumber producing states there has come to be better understanding upon the part of the public of the importance of the industry to all the people and the prejudice engendered in earlier years by people, press and government unfamiliar with the facts has disappeared in part. The public has come to have respect for an industry that yields eighty per cent. of its receipts to labor.

The only cause for misgivings regarding the conditions which may prevail during the year is the past failure of manufacturers to regulate their business so that the industry shall not suffer from itself. There should be a demand for lumber sufficient to give a fair volume of business to existing mills, but double shifts and new operations developed without corresponding development of markets, would again result in over-supply, price cutting and distress. This is a critical time for lumbermen. If they follow the bucket to the bottom of the well again many will never return. They now have an opportunity to rehabilitate the industry and restore its credit. Simultaneously they could controvert the frequent assertion that lumbermen are the poorest business men in the country.

Timber owners should not expect an immediate advance in stumpage values. One or two years of real prosperity among manufacturers will be necessary to stimulate purchasing for speculation tracts held at normal prices. Future purchasing will be for operating purposes at required prices or for speculation at bargain prices. The long period during which the industry has been prostrate has discouraged some owners or extended beyond their ability to hold. Until all such timber has passed into strong hands there will be competition among sellers and no new levels of trading prices will be reached. Manufacturing must be stabilized or stumpage will go back.

None can confidently predict the events that may take place during 1916, but it may be expected that it will bring co-operation tending toward stability in manufacturing, closer relations between timber owners and manufacturers, sales of many tracts of timber available for development, some speculative buying of cheap tracts and more or less readjustment in all directions. Speculators will be attracted to British Columbia by low-priced timber, fixed carrying costs over a long period of years and a disposition upon the part of the government to support the industry rather than destroy it. The year should be a profitable one for lumber manufacturers and timber buyers who see beyond the present.

Exports and Imports for 1915

Exports of Canadian forest products during the calendar year of 1915 amounted in value to $49,779,509. In the three previous years the values were as follows:—1914, $41,871,383; 1913, $42,532,673; 1912, $43,586,853.

Imports of wood and manufacturers of wood for the year 1915 were valued at $8,273,456, whereas during 1914 the total was more than double that of 1915, being $17,138,648. The imports of wood and manufactures of wood during 1915 were divided chiefly as follows:—from the United States, $7,798,237, from the United Kingdom, $170,419.

Details of the exports of wood and manufactures of wood during 1915 are as follows:—

Articles Exported	Twelve Months Ended December. 1914	1915 Total	1915 To United Kingdom	1915 To United States
Wood and manufactures of—				
Logs	$ 902,650	$ 1,315,284	$ 51,940	$ 1,263,004
Lumber—Deals, pine	1,190,851	1,288,422	1,209,851	48,201
Spruce and other	6,160,922	9,843,717	9,069,525	262,202
Laths, palings and pickets	1,880,309	2,356,824	11,268	2,331,572
Planks and boards	18,740,936	22,005,396	1,988,126	18,463,402
Shingles	2,814,087	3,624,218	.....	3,6[illegible]6,178
Timber, square	722,527	478,958	467,055	11,903
Wood blocks for pulp	6,680,490	6,164,113	.....	6,164,113
Wood-pulp	8,865,436	9,279,414	324,032	8,357,747
Total	51,470,356	59,951,741	14,817,288	41,887,558

During January, 1916, exports of Canadian forest products were valued at $3,243,360. During the two preceding years the exports in the month of January were valued as follows:—January 1915, $1,811,049; January 1914, $2,159,088. During the 12 months ending January the exports of Canadian forest products were valued as follows:—1916, $51,211,820; 1915, $41,523,344; 1914, $42,707,781.

A report of Great Britain's imports during the calendar year 1915, published in the Weekly Bulletin of the Department of Trade and Commerce, states that the imports of sawn or split timber from Canada during 1915, amounted in value to $4,844,453 as compared with $2,579,992 during 1914.

Recruits for a Canadian Forestry Battalion (the 224th Overseas Canadian) are being called for by Lt.-Col. Alexander McDougall, for Forestry work in England, Ireland and Scotland. Particulars will be found on Page 54.

Government Will Use Canadian Timber Only

Ottawa, March 8th (Special to the Canada Lumberman):—The Dominion Government has decided to use Canadian timber only, to the exclusion of imported timber, in all public works. Southern pine, even in 1915, when Canada was at war and when there was a great decrease in the consumption of lumber, was imported to the value of over $3,000,000. In previous years very much larger quantities were imported, despite an adverse trade balance for Canada and in the face of a supply in Canada of better timber at an equal or lower cost, grown and manufactured entirely within the Dominion. The Dominion Government has in past years used many million feet of Southern pine in various public works, but henceforth Canadian timber will be used to the exclusion of the foreign article. Douglas fir will replace Southern pine in such works as Quebec and Montreal harbor improvements and Hudson Bay terminals. Douglas fir has been used entirely in the Toronto harbor works, as a clause was inserted in that contract calling for Canadian material.

A Woodsmen's Battalion From Canada

In connection with the formation of a regiment of woodsmen which was recently announced by Major Sir Sam Hughes, the statement was made by the Minister of Militia and Defence in the House of Commons recently that this regiment was being organized for the purpose of cutting timber and was being recruited from among lumbermen in Canada. Major-Gen. Sir Sam Hughes stated that these men were "very familiar with cutting timber into lengths of various sizes. The freight on timber from North America and other parts to Europe is practically prohibitive now; vessels cannot be obtained to carry it. Timber is being cut in Europe and these men are going over to cut it." Major-Gen. Sir Sam. Hughes also stated that Lt.-Col. Alex. McDougall has been chosen as the commanding officer and that he had selected two very distinguished members of the House of Commons as his seconds in command.

Lt.-Col. Alex. McDougall, Officer Commanding, informs us that this Battalion is to be known as the 224th Overseas Canadian Forestry Battalion and is being formed at the urgent request of the British War Office for the purpose of getting out timber and lumber for use in carrying on the war. It is the intention to have none but experienced bushmen connected with the Battalion. Recruits will be welcome who have this experience and are physically fit. It is earnestly hoped that all lumbermen will co-operate with the Military Department in trying to make this Battalion a success. Recruiting offices are to be opened immediately at Mattawa, Arnprior, Buckingham, Hawkesbury, North Bay and Sudbury. Offices at 43 Bank Street, Ottawa, and at Pembroke have already been opened.

As soon as this regiment has been mobilized, which is expected to take about six weeks, it will be sent over to start operations in the forests of the British Isles.

Credit Bureau Secretaries Organize

The first conference of lumber association and credit bureau secretaries was held recently at Cleveland, Ohio, and representatives were present from Chicago, Ottawa, Youngtsown, Toledo, Columbus, Akron, Rochester, Grand Rapids, Cleveland and Detroit. Mr. J. V. O'Brien, Cleveland, Ohio, was appointed temporary chairman and Mr. J. F. Deacon, Detroit, Mich., temporary secretary. Mr. O'Brien stated that the object of the conference was to bring the secretaries together so that they might exchange ideas in regard to methods of handling credits, etc., and to co-operate in all matters of mutual interest. He submitted a tentative list of topics for discussion including the following:—Plans to improve price conditions, Credit Machinery, Codes and Legislation, Advertising, Social Features, Ethics and unfair Competition, Costs and Efficiency, Statistics and Financial Matters. Mr. O'Brien dealt briefly with each of these subjects and a general discussion followed, in the course of which many new and clever ideas were brought out. As a result of the discussion it was decided that the extensive field could not be covered at an initial meeting. It was decided therefore to hold a later meeting, to which members might come fully prepared to take part in a formal discussion.

The temporary officers were appointed permanent officers and it was decided to form a permanent organization. The next meeting will be held on Friday, March 24th. Mr. Warren J. Duffey, Toledo, Ohio, was appointed a committee to draft a suitable constitution and by-laws, to be submitted at the next meeting.

P. Z. Caverhill, late of the B. C. Forest Branch, has begun his preparations for a survey and classification of the Crown lands of New Brunswick, having recently been engaged for this purpose. He expects that it will take four years to complete the survey. During the coming summer he will have about 15 men at work, divided into three parties.

A New Firm of Wholesalers for Toronto

The ranks of the wholesale lumber trade in Toronto have been added to by the formation of a new firm under the name of Muir, Kirkpatrick & Sharpe, who have opened offices in rooms 1123-24 Traders Bank Bldg., Toronto. The new firm are making a specialty of British Columbia products and in order to facilitate this end of their business they have opened offices also in the Central Bldg., Victoria, B. C. In B. C. products they are handling an excellent line of fir, cedar, spruce, white pine, shingles and lath, and making a specialty of 12 in. clear butt shingles, also fir, cedar and spruce lath. They have formed good connections in British Columbia and are able to guarantee splendid stock and satisfactory shipments. Their line of Ontario products includes white, red and jack pine, spruce, hemlock, lath and posts. They also have formed connections which will enable them to handle a good line of yellow pine, having been appointed general agents for Ontario for the Central Coal and Coke Company of Kansas City, Mo., one of the largest yellow pine firms west of the Mississippi River, who have a total capacity of 400,000,000 feet per year.

Mr. J. K. Muir is widely known throughout the lumber trade in Canada, having had a life long experience in the lumber business, both in the manufacturing and wholesale ends, and having been engaged during the past six years in the wholesale lumber business in Toronto.

Mr. F. A. Kirkpatrick has been connected in a selling capacity with a leading Toronto wholesale firm during the past nine years, and is well known to the retail trade throughout eastern and western Ontario.

Mr. E. P. Sharpe was connected with the fire insurance business for twelve years during which time he specialized upon sawmill and lumber insurance. Latterly he has been connected with a Toronto wholesale lumber firm whom he represented in the Toronto city trade and also in the Ontario trade.

The new firm are already making themselves known to the trade as progressive and successful business men. With the experience and reputation that the members already have we feel sure that they will be welcomed by the trade throughout Ontario and that they will quickly become important factors in the wholesale lumber business of the province.

The Swedish Timber Market During 1915

In spite of many difficulties, among these the declaration of timber as contraband of war, the year 1915 was a favorable one for the Swedish timber market. At the beginning of the year the prospects were very unsatisfactory, but later in January the market became firmer and by the end of the month the sales amounted to 100,000 standards. Still there was much unstableness until the end of March, when the negotiations with Germany were completed and the Swedish timber export made free. Up to this time only 25 per cent. of the year's output was sold, whereas 55 per cent. had been sold during the corresponding period of the previous year. After this the market became firmer and the prices went up, but other circumstances counteracted this gain.

The freight charges were greatly increased, and instead of agreeing to the f. o. b. terms the British buyers would accept only "payment on safe arrival" terms. However, the War Risk Insurance Company has been able to allow the exporters good terms. Twenty per cent. of the premium is paid in cash and a draft given for the remainder. This will not be collected unless the company finds this necessary at the end of the war.

Finland and Russia could not compete for the trade, as it was out of the question to ship from the Baltic ports and the freights were too high via the White sea. In addition, Austria-Hungary's export to the Mediterranean countries, usually amounting to about 600,000 standards, was stopped. The situation of the Swedish timber market was also strengthened because of the extension of the British operations to the Orient. Furthermore, the Netherlands, which country had formerly purchased most of its timber from Russia and Finland, placed large orders for spruce, which caused the price to increase so that it soon reached that of fir. In September the price was up to 132 florins ($53), and there was an additional gain because of the rate of exchange. When the rate of exchange on the pound sterling began to get low, the Swedish exporters demanded that they be guaranteed 18.20 crowns per pound, which the British merchants at first opposed, but later had to agree to.

In August, France began to order timber, and the market was very favorable. At the beginning the price was 175 francs ($33.78), but by the end of the year it had gone up to 200 francs. The unusually early winter and the great amount of ice in the northern ports hindered the traffic considerably.

In the middle of November orders began to be taken for 1916 and the prices were very favorable, compared with those received for the sales in the earlier part of 1915.—(U. S. Commerce Reports.)

Market for Canadian Timber in France

Imports Before the War Chiefly from European Countries—Rebuilding Period Will Present Great Opportunities.

By H. R. MacMillan*

Compared with Great Britain, France does not import large quantities of timber. The per capita importation of Great Britain for 1914 amounted to $3.60 per head. The annual consumption of timber in Great Britain for the year amounted to 14 cubic feet per head, of which 16 per cent. was grown at home and 84 per cent. imported. For the same year France imported timber valued at $37,380,000, an average of 93 cents per head, just one-quarter the per capita importations of Great Britain.

The importations of timber into France for 1913 amounted to about 1,775,000,000 feet board measure, reckoning all commodities in this measure. The varieties are not clearly separated in the Customs statistics, but the most important classes are shown approximately below:—

Classification of Imports	Quantity M. feet board measure.
Softwood, logs, deals, boards	844,724,000
Pitchpine	65,529,000
Oak	37,793,000
Railroad sleepers	12,131,000
Douglas fir	5,000,000
Other varieties	29,160,000
Softwood logs less than 7½ feet long, cubic feet.	12,943,000
Rough poles, props, faggots "	9,525,000
Match splints "	253,000

Countries of Origin

The chief countries supplying timber to France are given herewith, with the approximate quantities supplied by each, in 1913:—

	Quantity of timber imports into France 1913
Russia	1,020,552
Sweden	654,169
United States	194,281
Germany	102,269
Austria-Hungary	96,128
Belgium	25,578
Japan	23,978
Switzerland	23,062
Norway	14,232
Roumania	12,875
Turkey	8,091
Canada	529

An overwhelming proportion of timber imports into France are from European countries. That this should be so is due to the care paid to forest protection and management in Europe.

The only products of importance purchased by France outside Europe are pitch-pine and oak from the United States, oak from Japan, and Douglas fir from Canada and the United States.

Softwoods

The most important product imported into France is softwood from Russia, Scandinavia, Germany and Austria-Hungary. This timber is imported for general building purposes.

The lumber imported into France is chiefly cut in inch sizes, it is classified in the Customs statistics, however, for duty purposes according to the metric system.

Over 60 per cent. of the softwood lumber imported into France is between 1 2-5 and 3 1-5 inches in thickness, being 1½, 2 and 3-inch deals; 30 per cent. is lumber less than 1 2-5 inches in thickness and the remainder is timbers and logs.

The average price of this class of material imported was, before the war:—

Less than 1 2-5 inches .....34 cents per cubic foot.
1 2-5 inch to 3 1-5 inch.....36 " "
Over 3 1-5 inch .....23 " "
Rough logs .....25 " "

The sale of Eastern Canadian deals in the market would depend entirely on price.

When freights again become normal Douglas fir will also be able to compete in France for general building purposes. Up to the present it has been used only in comparatively limited regions where large timbers are required and as a building timber is not well known. The prospects for use in France will be improved by the great demand likely to be made on European forests after the war and the increased prices to be expected. The fact that during the war Douglas fir common lumber has been extensively used in trenches, military and commissariat buildings, railroads and temporary buildings will also prove an argument in its favor.

Pitch-Pine

Pitch-pine has long been used in large quantities in France. The United States is the only country supplying it. About 69 per cent. of the pitch-pine is imported in timbers 6 inches by 6 inches and larger, 18 per cent. is 1 2-5 inches by 3 1-5 inches thick, and 13 per cent. is in the form of boards less than 1 2-5 inches in thickness.

Pitch-pine is the timber commonly imported for industrial purposes, for public works, harbor and naval works, and has held the market to the exclusion of Douglas fir because it was cheaper.

The shipping of Douglas fir through the Panama canal will alter the situation. Douglas fir will, when conditions become normal, be cheaper than pitch-pine. It will have the further advantage of greater freedom from defects, a consideration highly appreciated in France.

The sales of pitch-pine to France are handled chiefly by brokerage houses and timber dealers in London, some of whom have branches in France. The shipments are handled both by parcels in liners and by full cargoes.

Should any of the regular lines operating between the Pacific coast and Europe arrange calls at French ports business would be facilitated.

Sleepers

There are 25,471 miles of railroad in France, in which are over 60,000,000 sleepers. Sleepers are used at the rate of 2,400 to the mile.

Five thousand six hundred miles of railroad are owned and operated by the State, the remainder is owned and operated by five different companies.

Hardwood sleepers are preferred. Beech and oak are the most commonly used. Maritime pine, Scotch pine and spruce are also used. No sleepers are used without creosoting. The average life of creosoted beech and oak is twenty to twenty-five years. The pines give a life of fifteen to eighteen years, and spruce eight years.

Very rough sleepers are accepted, particularly in oak, many of which are crooked, half round, irregular in shape and size.

The annual requirements of the French railways are 6,000,000 sleepers. About 5,500,000 are produced locally and 500.000 imported. The imported sleepers are chiefly beech from Austria-Hungary and Turkey. The domestic sleepers are chiefly oak, Maritime and Scotch pine.

The prices of the imported sleepers in 1912 were:—

Oak.....66 cents each (containing 3½ cu. ft.)
Others (chiefly beech) 58 " " " "

Until the war Douglas fir had not been used in France for sleepers. During the war large quantities have been used, both in maintenance and extensions of the established railway systems and in the building of purely military lines. Standard sleepers have in nearly all cases been purchased for the latter lines with the object of turning them over to commercial railroads when the need for the temporary military roads no longer exists. These sleepers are all used without any preservative treatment.

Untreated Douglas fir sleepers will have had a fair trial. Samples have also been sent to the various French railroads in order that they may be creosoted and given a trial. All sleepers imported into France are imported before creosoting.

The engineers of the French railroads give preference to a hard sleeper.

Immediately following upon the war there may be a demand for imported sleepers. Otherwise the market in France will remain limited to about one-tenth the annual requirements of the country. The other nine-tenths will continue to be supplied from the French forests, where only the poorer trees and the lower grades of timber are made into sleepers.

Before Canadian sleepers can compete in the French market it will be necessary to demonstrate that they have the necessary life. This can best be done by actual trial of the sleepers in France.

Sleepers from Eastern Canada would find a ready market in France if they could be delivered c. i. f. French ports to compete with the prices quoted. Beech and maple particularly would find a ready market.

A Canadian exporter wishing to develop a business in sleepers

with France should make arrangements through the office of the Commissioner General for Canada to secure as representative in France some one acquainted with the sleeper business and favorably situated for doing business with the State and private railroads. Both such representation and trials of sample lots of sleepers, are necessary to the developing of a successful business.

Douglas Fir

Pitch-pine has always been cheaper in France than Douglas fir, owing to the great difference in freight rates on the two timbers before the opening of the Panama canal. Douglas fir up to the present has only been purchased in large sizes and long lengths, for use near the coast. The forests of France furnish nearly all the large or long timber used in the interior of the country.

The Panama canal will certainly in a few years make a difference in the quantity of Douglas fir used in France. The annual consumption should within a decade increase by over 500 per cent. The chief uses are likely to be timbers for false work and dimensions for rough building purposes. Very little wood is used for interior finish in France. Such as is used is painted pine, spruce and balsam; oak is used in natural finish in offices and some public buildings.

Douglas fir is unlikely to be used industrially in France because of the great quantity of oak in the country. An interesting object lesson will be provided by the freight trucks, manufactured of Douglas fir, which are now being sent from Canada for the French railroads.

The imports of Douglas fir to France are handled in the same manner as pitch-pine by timber brokers in London working in conjunction with agents in France.

Duties

All timber entering France from foreign countries is dutiable. The rates of duty are based upon the sizes imported. The duties upon important classes of timber are given here:—

	Duty per 2,200 lbs. weight.
Rough logs	$ 1.30
Railway sleepers	2.00
Sawn 3 1-5 inch more in thickness	2.00
Sawn 1 2-5 inch, 3 1-5 inch thick	2.50
Sawn less than 1 2-5 inch thick	3.50
Match splints	3.00
Poles, props	0 60
Softwood logs less than 7½ feet long	0 04

The low rate of duty for short softwood logs is to allow the importation of pulp wood, a trade amounting to 17,000,000 tons weight per year.

The chief ports through which the import timber trade of France is handled are Havre, Dunkirk, Bordeaux and Marseilles.

Rebuilding After the War

The chief interest for Canadians in the timber situation in France is in the necessary rebuilding of devastated areas.

The population of the fireswept area in Northern France is 7,000,000. An equal number of people in Belgium have suffered a wholesale destruction of their buildings. Reconstruction at some period or other is inevitable. The effect that reconstruction on such a colossal scale may be expected to produce on the lumber trade can only be surmised. There are, however, certain well defined bases from which an estimate may be formed.

The population of 14,000,000 in Northern France and Belgium have lost a great proportion of their dwellings, industrial and commercial establishments and public works. The ruins will afford little salvage.

The restoration of peace will be the signal for a burst of rebuilding throughout the land. The people will immediately require shelters; temporary industrial, communal and public works will be matters of first concern for the Government in order to prevent emigration, start production and absorb the disbanding armies.

Wood has not been used to a great extent for building in the war-swept countries. Stone, brick, and cement tiles are the native materials. These lie ready at hand, the population is skilled in their manufacture and use, their manufacture will afford labor, their use will obviate sending money abroad to pay for foreign purchases.

Nevertheless the use of these materials on a large scale requires time; when Belgium and Northern France are rebuilt wood will be used to a greater extent than ever before. It is the only building material that can be quickly secured in large quantities.

Rebuilding on such a scale would at any time tax the resources of the forests of Europe, which do not suffice from year to year in normal times to meet the maintenance requirements of the continent.

Insufficiency of European Forests

There are two reasons why after this war European forests will not meet the demand.

During the war timber outside of Russia has been cut and destroyed at an annual rate hitherto unknown in Europe. The western battle line is stretched through one of the most productive forests of France. Elsewhere in Europe war has obliterated forests. Behind the lines of the enemy and the Allies timber has been cut for war purposes in quantities far exceeding the requirements of peace time. The European neutrals have greatly increased their cut to reap the harvest of high prices.

Nor will Belgium and France be the source of the only call for timber. Twice as great a population is homeless in Poland, East Prussia and Northeast Hungary as on the Western front. There only the naked land remains. The timber requirements will be enormous, particularly because it is a country where wood has always been the most important building material and where the instinct of the population will be to rebuild in wood.

The timber for rebuilding this eastern and interior region will not come from North America. It will be supplied from Russia, the Baltic ,and the enemy countries. The immense quantities of timber to be required in this, the most accessible market to their forests, will decrease the quantity of Russian, Scandinavian and enemy timber likely to find its way to France and Belgium, and will also tend to raise the level of European timber prices.

It is a safe conclusion, therefore, that large quantities of timber from North America will be required in France and Belgium. The general requirements will be for lumber suitable for portable buildings, common lumber for sheathing, studding, joists, rafters, cheap doors, sash, and timbers for falsework and temporary reconstruction of railroads, bridges and other large works.

Roofing will be in great demand. The competition will be between galvanized iron, prepared roofings and possibly shingles. The prospects do not look good for shingles, because the galvanized iron and felt roofings are cheap, quickly laid and on the spot, and because the European cannot think in terms of a wooden roof.

It has been considered by the authorities purchasing timber for the Allies that vast quantities of the timber taken to the front for war purposes will be available after the war for rebuilding the country. The quantity, were it available, is insufficient, and moreover the wastage has been enormous. In spite of all that may be done great quantities of timber will be necessary from outside Europe.

The present is the time to arrange for the supply. It is possible that, in order to keep prices down and to systematize the work of reconstruction, the purchases will be made through Government channels. If not, British and continental firms will buy on their own account in the usual manner. Canadian exporters should be prepared for either eventuality and should have arrangements made so that in any case they may receive inquiries through competent reliable sources the moment demand appears.—Trade and Commerce Weekly Bulletin.

Five Per Cent Decrease in United States Lumber Production in 1915

The United States Forest Service has made public the following figures upon the amount of lumber cut in 1915 compared with 1914 by 1,175 mills which manufactured 5,000,000 feet or more each.

Production of Identical Mills in 1915 and 1914

State	Number of Mills	1915 M Feet	1914 M Feet
Washington	119	2,921,908	2,723,277
Oregon	49	1,219,215	1,384,480
Idaho	19	519,219	572,964
Montana	7	233,065	199,001
California	43	994,639	1,109,733
Colorado and South Dakota	3	33,738	35,032
Arizona	4	74,023	76,305
New Mexico	4	31,745	41,192
Arkansas	63	1,123,174	1,168,319
Oklahoma	4	94,551	76,542
Texas	65	1,419,861	1,397,690
Louisiana	140	3,081,624	3,230,278
Mississippi	80	1,276,982	1,375,511

Total	1,175	20,286,782	21,443,903

The Reader's Viewpoint on Trade Topics

Workmen's Compensation Act in Ontario—Criticisms and Suggestions from Lumbermen

Since the publication of our March 1st issue we have received several more communications regarding the Ontario Workmen's Compensation Act. These are mostly along lines somewhat similar to the previous letters. Some of the more interesting letters we reproduce, as follows:—

The Workmen's Compensation Act is all right so long as the Board does not pay out money to injured employees who do not deserve it. Last year one of my employees was injured through his own carelessness and he collected $108.72 from the Board, to my knowledge. Recently, I understand, that he has received from the Board a cheque for $75 more. This man has not worked for me since he got injured, but is working on a section of the T. & N. O. Railway, and is receiving the regular wages paid to other ordinary men. It does not seem to me that it is just to the other men that this man should be drawing double pay. The Board should be careful not to pay compensation to employees who have been injured, but are well enough to work and are working and earning the same wages as they received before they were injured. As this Act has been in force only one year, it is almost impossible to have everything perfect, but we all hope that things will improve in time.

* * *

Operation of Act Too Expensive

I have only met one assessment for the Workmen's Compensation Act, and that only for four months of last year. I have not been notified as to my last assessment. I paid last year $1.80 per $100. My payroll I sent in, for the last year, is $5,083. I had one man lose his little finger with the cut of a saw cutting slabs. His compensation was about $40, being 55 per cent. of all time lost, and he was sent $45 for being disabled, so he had full wages for all the time he laid off at $2 per day. Now, on the other hand, that is the first employee I ever had hurt who would have come under the act. I never had a man laid off for one week in thirty years milling and bush work from an accident. Besides, I am the only mill here that I know of that has had an accident, and I expect it will average about the same through all the mills.

Now, you see, I will pay in, at the 1.80 per cent. in full for my employee, and the other mills I have mentioned will pay as much. If four of us pay enough for four employees being compensated, do you not think that the expense of taking charge of the act is far too much, when we only get one-quarter back for what we pay in? Now, in my case, the employee could not have come on me for any damage as my saw was fully guarded. Of course, it was a good thing for him. It would have been at my own option whether I compensated him or not.

I certainly have no objection to paying a reasonable insurance for the benefit of employees getting hurt, but if we have to pay three-quarters for the act to compel us, I do object.

* * *

Employees Ought to Contribute

Fortunately, we had no accidents in our operation during 1915. We were assessed on $8,000 at 2 per cent., making it $160. One-half we paid January 1st, 1915, or there abouts, and the balance, $80, on or about July 1st, 1915, with interest at 6 per cent. per annum $240. Owing to curtailed lumber operations we only paid out $5,000 and a few dollars, and up to date have not contributed any this year.

We were not at all pleased with the call one year ago (in the face of money stringencies) to enable the Board to accumulate a fund of $1,000,000, when the manufacturers of this country could have used this money to better advantage employing laborers who were worse in need of money than they were in need of compensation.

We hope to see many amendments to the Act in the next few years, and the first and most important, in our opinion, is to attach some of the responsibility to the employee where an accident occurs through his own carelessness.

We also think that an employee should be a contributor to the fund through his employer. This would help guard against paying compensation to the undeserving. This is an evil which will creep in in these days of graft, and will be like a millstone on the manufacturer's neck.

* * *

All Right for all Parties but Rates Too High

We paid last year $240 premium, and our mill contractor paid $108; this is about four times what we used to pay for liability insurance. We have had more accidents in 1915 than we had in the previous eight years. The writer, who has been sawmilling for over thirty years, and never got a scratch, just happened to walk into the mill on July the 12th and sit down, when he got a thigh smashed with a board from the edger, and was in the hospital for two months. Altogether, the employees have drawn from the fund about $319.27, and there is one man who is still drawing compensation who got hurt since the first of the year. We think that it is all right for the men and also for the employer, as the men are sure of something, and it does away with any trouble between employer and employee; but we think that the rate is too high.

* * *

Compensation Premiums Excessively High

We are pleased to see you advocate a discussion of the Workmen's Compensation Act, and its application to the woodworking industries. We believe there is much room for constructive improvement, and extend you our best wishes and co-operation.

Allow us to state a few of our experiences, with the sincere hope that it will help lead to the betterment of the Act.

We are manufacturers of white pine lumber, lath and pickets, starting our process with cutting the timber in the woods, taking it to the mill, manufacturing it into rough lumber, lath and pickets, and piling the product on the docks ready for shipment. In our mill and yard we employ about two hundred men, and in our logging department we have from four hundred to one thousand men, depending on the extent of our operations.

In the past eight years our total payrolls, we estimate, would aggregate over $1,250,000. For casualty claims we have paid to our employees an amount not to exceed $2,500, or about one-fifth of one per cent. of our payroll. Every claim has been settled amiably and to the satisfaction of the employees or their heirs. Not one case has been taken to the courts for adjustment.

Last year, in our logging department, the payroll was $60,042. Our Workmen's Compensation tax was $1,200, and the compensation paid was, in round figures, $80. Our tax was at the rate of 1.80 per cent., and compensation amounted to less than one-seventh of one per cent.—a difference in this particular case of over 1.60 per cent., or $1,120. We paid as premium more than fourteen times our paid out compensation.

In our mill department the payroll last year was about $74,500. Our Workmen's Compensation tax was $1,343, and we paid out for compensation $355. Our claims were less than one-half of one per cent., and our tax was at the rate of two per cent.

Our total compensation paid last year was, based on our payroll, approximately one-third of one per cent. We paid to the Workmen's Compensation Act at the rate of over 1.90 per cent.

The above percentages and comparisons throw a fairly clear light on the situation from our viewpoint.

The lumber industry is the largest industry in Canada. It ranks first of the manufacturing industries in the number of employees. It is the largest industrial consumer of farm products. Its tonnage given to the railroads is among the largest. It is estimated that from seventy-five to eighty per cent. of the cost of lumber goes to labor, farm products, and freight.

An industry of this magnitude and universal benefit can afford to be given deep consideration, and deserves the support of the Government and people in the framing of a Compensation Act which will be just and equitable. We believe the lumbermen, as a class, are in favor of some form of compensation for their workmen, and that they will be liberal, and not niggardly, in their expenditures for the support of such an act. At the present time it seems as though the lumber industries have been paying too dearly for compensation. We hope they have not been carrying the burdens of other industries, that their equipment is modern and safe, and has the necessary preventives, and is not causing unnecessary accidents.

At present, in case of indemnity to an employee, the employer has been given little consideration. He simply files a statistical report, giving name of employee, time and place of accident, also nature of injury, together with other minor details. He, the employer, has no voice in the adjustment of compensation, although he is the only representative on the scene of accident, the one most familiar with the personal character and home surroundings of the injured, and last, but not least, furnishes the funds by which compensation is made possible.

We believe the Compensation Board is working industriously and earnestly in its endeavor to make the Act adequate, but permit us to present a few suggestions.

Put the Workmen's Compensation Act on a mutual basis. At the beginning of the year levy an estimated tax on each class—one believed to be sufficient to cover all expenditures in the class. After a few years' experience this estimate should be quite accurate. Then, at the end of the year, take the total indemnities and expenses in each class and divide them proportionately, on a payroll basis, among the companies in the class, and refund or charge the difference between the estimated and actual tax.

In case of accident to an employee, have report submitted to the Board of supervisors, the same as at present, but permit the employer to make adjustment of the claim, if he can do so satisfactorily to the employee and himself, within a reasonable time, and providing such adjustment meets with the approval of the Board. If no adjustment can be made by the employer, allow the case to come before a tribunal for decision, as in the present system.

In order that we may understand how the present Act is working, we

would be interested in a report of the Workmen's Compensation Board for the past year, showing the total payroll, with amount of premium and rate charges for each class, in the different schedules, also the compensation paid by each, and total cost of maintaining the Act, showing expenses for salaries, doctors, travelling, office, etc., and the amount of funds on hand.

We thank you for this opportunity, and hope we may assist you in your good work.

* * *

We paid into the Workmen's Compensation Board $180 for last year, and so far, we have had no accidents. We can give you no information as regards compensation costs with other insurances as we have not carried any. Our employees seem to be satisfied, and we do not object to the act, but think the rate somewhat high.

* * *

Likes the Act But Not the Rates

So far as it has to do with relieving us of the responsibility and inconvenience, to say nothing of the disagreeable feature of settling with the men, the Workmen's Compensation Act is more than a success. As to whether or not its cost compares favorably with the insurance charged by liability companies, we have only to say that the Act has not been in operation long enough to afford a proper basis for comparison. During the first year, of course, the premiums charged were away above what a liability company would carry them for.

* * *

At one of our mills the assessment was $540, and the amount paid out for accidents was $187.58. The workmen have been treated liberally indeed; far more liberally than any insurance company would treat them, but the cost is excessive.

Pitch Pine Exports Will Benefit B. C. Fir Trade

Editor Canada Lumberman:— Vancouver, B. C.

The situation in the Southern pitch pine market today is one of interest to all lumbermen—even those on the Pacific Coast. With a large foreign order that was taken on by the mills last fall still uncompleted, we now hear of another for the French Government for 200 million feet being placed in Savannah, Georgia. This order is for early delivery and carries with it the proviso that shipping facilities will be guaranteed by the French Government. There are other enquiries out for foreign shipment, including one for 75,000 pitch pine ties; nor is this the only gleam of sunshine that is illuminating the pitch pine market. The scarcity of steel, owing to the enormous foreign orders the steel mills have undertaken, has turned the attention of the railroad engineers to pitch pine. In short, yellow pine seems to be fairly in for a season of appreciable prosperity. Nor is the season of prosperity likely to be soon over. From every port that a pitch pine stick of timber ever went out of, comes up the cry for tonnage. There is any number of export orders unfilled. The shortage of vessels and the rates of ocean freight are something inconceivable to anyone who has had no experience in the export lumber trade. The latest steamer charters from Gulf ports to Great Britain show a rate of 450/- per standard. Similar charters were made in June, 1914, for 70/-, and even with this increase in rates it is only occasionally that boats can be secured. If the war were to cease tomorrow freights would fall—somewhat— but the unfilled demand for exportable lumber in every country that has been unable to get it for the last 18 months would keep every mill near the Coast busy for an indefinite period. Nor is it probable that prices would fall; for the very high price of imported woods in England, for instance, is four-fifths freight charges. The f. o. b. price of lumber could easily be advanced without comment from the buyer, were freights anywhere near normal.

Now, many of the Pacific Coast forest products enter the same markets as yellow pine. Douglas fir, for instance, is equally available for construction timbers. With so much yellow pine diverted into unaccustomed channels, the demand for Pacific Coast woods increases. It is felt already; another feature favoring the latter is that car shortage and embargoes are being much more severely felt in the yellow pine district than in the West.

The southern pine is a valuable wood: it enjoys a great reputation, both at home and abroad, and those interested deserve their success because of their energetic campaign, lasting over so many years. But if statistics and business facts mean anything, the time is not far off when the Pacific coast men may reap where the Gulf coast man has sown. For the supply of standing pitch pine is being very raidly depleted. Whole tracts of it have been ruined by windstorms. During the business boom reaching over the period of 1900 to 1907, the demand for sawn timber experienced a significant change. At the beginning of that period there was little difficulty in obtaining for export an average cubic standard of 40 feet to the stick. But so large was the output of the mills, that towards the end of that disastrously prosperous era, considerable difficulty began to be felt in maintaining the 40 foot standard.

We owe a good deal all round to the yellow pine operators. They have by their energy and ingenuity introduced their product into almost every out-of-the-way spot on the globe, and by doing so have incidentally opened the way for other sorts of lumber manufactured here. We congratulate them on their present favorable position.

Yours truly,

FRANK FOSTER.

of Mainland Lumber & Shingle Company, Vancouver, B. C.

British Columbia's Production and Prospects

The production of lumber in British Columbia during the past year was 1,151,903,000 board feet. The cut exceeded that of the previous year by nearly two million feet. The value of forest products totalled $29,150,000, as compared with $28,650,000 the previous year, approximately ten million dollars being paid direct to wage-earners in mills and woods, and a similar amount for transportation, of which labor received a large proportion, and over four and a half million dollars was expended in supplies.

The shingle business exceeded other years, the production being valued at about $3,500,000. Sawn lumber produced about half of the total production, and various woodworking manufacturers, pulp, box-making, shingle, etc., produced eight million dollars.

Hon. Wm. R. Ross, Minister of Lands for British Columbia, referring to the present state of the lumber industry says:—

"During the depression of the last three years no industries have suffered more severely than the logging and sawmilling industries. Many mills and camps have been shut down and even among those which survived it has been impossible in many cases to cut down standing timber and make a profit out of manufacturing it. The decrease in the demand for lumber during the period referred to was most serious and statistics show that a sawmill capacity of considerably over three hundred million feet a year has been put out of action by the closing of mills around Vancouver, Victoria and New Westminster. This meant four million dollars or so of money which these mills could have circulated in these cities last year had they been in operation."

"Speaking generally, the outlook for an export lumber trade for British Columbia is excellent, once the shipping difficulty is surmounted. Last summer several hundred thousand dollars worth of business was secured by the Provincial Government acting as agents for British authorities. As soon as the Panama Canal is definitely opened that United Kingdom business will be resumed if shipping can be secured. In India and South Africa there is business awaiting us—held up for the time being by the lack of shipping, but awaiting us nevertheless. In both these countries, just as in Australia, there is a strong feeling created by the war, a feeling which is shared by Canada—that trade within the Empire must henceforward be a fundamental principle for the British Empire. As far as lumber is concerned, British Columbia is the natural source of supply for Australia, South Africa and India. A fair share of the Australian market alone would mean prosperity for our tide-water mills, if only a reasonable tariff preference be given our products. That such preference is certain to come, even our American competitors admit, and the special investigator whom they despatched to the Australian market sorrowfully confirms this fact; the whole lumber export question is being systematically pushed by every means within our power, and only the lack of shipping stands between us and the immediate results.

"Before leaving the question of lumbering reference should be made to the subject of further manufacture. In the lumber business we ship material that should be worked up here into manufactured products—we pay freight on shavings and sawdust and waste to factories elsewhere. This is all wrong. These woodworking factories should be located in the province itself, giving employment to skilled workmen in cities like Vancouver and Victoria. We should manufacture our own goods. I am glad to notice in this connection the progress that has been made towards a better state of things. For instance, the box industry is becoming an important one in Vancouver and Victoria and here we ship the completely-manufactured product. In the government's lumber market campaign this question of home manufacture is being studied carefully, for it has a very important bearing on our business future."

The Trade Extension Department of the National Lumber Manufacturers Association has completed the first of a series of engineering bulletins for architects and builders, the title being "Timber for Structural Purposes," and E. A. Sterling, Manager of the Trade Extension Department is the author. All the bulletins will be written by experts on technical topics, and give practical data to builders. This series of bulletins will probably comprise one of the most valuable series of building documents ever published.

Annual Meeting of Western Retailers

Good Progress Shown in Reports Presented—W. D. Galvin Re-elected President—Uses and Limits of Associations

The twenty-fifth annual convention of the Western Retail Lumbermen's Association, representing the lumbering and woodworking interests of Manitoba, Saskatchewan, and Alberta, was held at Winnipeg recently. Almost 300 delegates were in attendance, being from districts as far apart as Victoria, B. C., Fort Frances, Ont., and St. Paul, Minn., U. S. A. For the first time for many years the retailers invited the manufacturers and wholesalers to partake in their convention. A further feature of the meeting was the fact that for the first time in the history of the Association, the retail lumber dealers from Alberta had a voice in the proceedings owing to the affiliation of this Province at the twenty-fourt annual meeting of the Western Retail Lumbermen's Association.

President's Address

The President, Mr. W. D. Galvin, of the Galvin Lumber Yards, Ltd., Winnipeg, in his annual address said in part:—

Events of profound and colossal importance have stirred the world during the past twelve months,—events in which Canada is particularly concerned. Yet at the close of this memorable year we find, upon taking inventory, that in this country we have much cause for gratification. This is shown from a material view point in an abundance of crops of all kinds and an increased output of manufacturers, in themselves evidence that there may be found resources of sufficient adequacy to supply a self-supporting nation.

To be recognized as logical distributors of lumber supplies, we in turn must recognize and meet the various demands of the public, even where part of such demands must be supplied in a manner unlike that with which we have been accustomed.

In other words, we must meet the varying demands of ADEQUATE SERVICE if we hope to keep the business at home. The lack of such service shows the lack of progress on the part of the dealer. Unquestionably this is recognized as the guiding principle in the conduct of his business, by nearly every dealer.

It means that having obtained a contract, we have not rendered adequate service to our customer by selling him the abstract forms of dimension, boards and shiplap, unless we have entered into the transaction by supplying necessary suggestions and aid for completing the concrete form as exemplified in a finished house, barn, or other building, to the satisfaction of the customer. This thought has been supplied and emphasized in a most thorough manner by the activities of the Western Retail Lumbermen's Association of the Western States.

It means, that in order to accomplish things, you should continually make use of your building department devised for this purpose, or some other good building plan system, if there is any reason why you cannot use that of the association.

It means that you should use constantly and conscientiously, all of the devices which are supplied by the Association, and which cannot succeed unless they have the support of your co-operation.

It means loyal support for the undertakings of your Association both active and financial.

It means, that we should devise a more adequate system of credits throughout the country, and, having been devised, it should be constantly adhered to:—a system that will establish a proper relation between the man who is entitled to credit and the one who is not, affording a measure of adequate service to the worthy man, and a means of protection to the dealer.

A progressive and constructive policy means that the retailer should ever bear in mind the fact that his co-relation with the manufacturer is fundamental; that a greater co-operation should exist between the two branches of the one industry to the end that the greatest economic good may be accomplished for the public as well as the producer or dealer. This can only be done by proper measures of distribution rendering adequate supply service to the public, and by proper manufacturing methods with a view to elimination of waste; both with due regard for forest conservation.

It means an earnest endeavor to correct economic abuses within our industry, one of the most flagrant of which is inordinate overcrowding of competition at many points, bearing definite illustration in itself by necessity of the old saying, that "the consumer must pay the tax." Where two or even three yards at some points would suffice to afford abundance of competition, the existence of five or six yards, as is often found, creates a burden of overhead expense without adding one iota of service, and affords good cause on the part of the public for the suspicion, that as a result of this abuse, someone other than the dealer must pay. The fact is the stage of "diminishing" returns has been reached, and many communities as well as the industry would be far better off if this evil could be corrected.

What more does a progressive and constructive policy mean?

It means above all, that our activities should always be made clear and above public suspicion. They should be conducted on a basis of broadminded business administration free from deserved reproach or criticism, and in such a manner as to make sure that our business occupies an honored position before the public, second to that of no other industry. This may be accomplished by throwing open the methods of our business to public scrutiny at any time, so that the oft repeated opprobrium, "Robber lumber dealer," and such other mendacious fallacies may no longer be used, even by a minor uninformed portion of the public.

Secretary's Report

The secretary's report presented by Mr. N. G. Neil stated that out of a total of 1,400 yards, 55 per cent. were now members of the Association and 70 per cent. were actually affiliated with it in some shape or form. The membership during the year had increased by 350 yards or 80 per cent. The secretary then outlined the various

W. D. Galvin, re-elected President of the Western Retail Lumbermen's Asaociation

Alan M. Stewart, re-elected Sec.-Treas. Western Retail Lumbermen's Mutual Fire Insurance Company

F. E. Sine, Calgary, new Director of the Western Retail Lumbermen's Association

departments of the Association, all of which have been doing splendid work during the past year. These include a lost and found department for locating debtors whose addresses are unknown; a publicity department furnishing articles and illustrations for the newspapers; a bulletin department which issued 18 bulletins during the year; a building department, furnishing plan books which were used by 60 per cent. of the Association, 25,000 copies having been distributed and 1,250 additional ones ordered, and a department for special drawings.

The Value of Plan Books

An address by Mr. Geo. F. Robertson on "The Value of a Permanent Building Department" was one of the features of the meeting. Mr. Robertson spoke in part as follows:—

We, as lumber dealers, have been for years feeling the necessity for a plan book and an Architectural Department, which would bring assistance within the means of the smaller builder and meet the peculiar requirements of Western farm and village. Producing plans to meet the searching climatic conditions and which, in style and form, would conform to good taste and the carrying out of which would not be beyond the ability of the local mechanic and the local trades to supply.

In passing my opinion on this present plan book I wish to call your attention to the limitation of conditions which should be taken into consideration, such as that there are only about thirty-five house plans in the present book and about twenty farm out-buildings to meet the many different resources and the housing requirements. Thirty-five house plans cover houses in price from $500 to $5,000 to meet the various pocket books, in size to fit the bachelor, the childless family, or the family in numbers. In selecting house plans the difficulties would be simplified could we order the family to fit the house or make the pocket book fit the family.

Now we come to what are our particular and peculiar demands to be met in a plan book and here it might be helpful to state in what way the numerous plan books in print do not meet our demands. Practically all such plan books cater to the city business, which has made up the clientele of most of the architect's offices in the past, and these books illustrate the narrow house for the restricted city lot, the small kitchen, intended to provide the work room for a maid with the limited style of house-keeping sufficient for the city, a dining room not quite so small, and a very large parlor or living room. These architectural plans may have originally been intended for the locality of the particular architect, possibly Tennesse or California and construction planned accordingly. Other objectionable features are that the carrying out of the plans are unnecessarily expensive for our country business, with special detail work, odd stock and other features, to make the house, especially different and distinctive from any other house, needlessly expensive, and making the plan often beyond local mechanic as well as causing a great deal of worry in trying to get odd stock without unnecessary delays.

In our country houses and particularly the farm house we want large kitchens and dining rooms sufficient to accommodate the more complicated housekeeping of the farm, into which the family may gather in their interest to keep near the centre of all activity of the farm household. The strictest attention in planning must be paid to the kitchen and dining room. What is required is a house with outside door openings guarded as much as possible by vestibule and entrance ways; a house well lighted with plenty and sufficient windows. In this particular respect we have in the past probably been going to an extreme in cutting out as many windows as possible in trying to save fuel, making the rooms often cheerless and not so healthful for the want of the wholesome light and sunshine. As to the construction, our department has not erred in specifying insufficient material and details for warm construction, and the houses as specified may not be too good but may be a little better and more expensive than many of those which the local contractors are used to building. Sometimes in hurried comparison the plans may look too expensive according to estimated cost.

As to outbuildings and barn plans, particularly barn plans, there is so much more variety and detail to this class of planning than is the popular impression. We need improvement in this class of building quite as much as in the house building and much education is needed along the line of ventilation systems.

There is variety of requirements such as barns for accommodation of different classes of stock, or buildings for mixed stock. There is also to be taken into consideration the arrangements of feed passages, whether central or side passages or a feed stall shall have preference to a passage. All have their advocates and call for representation.

The barns represented in our plan book were planned by a practical farmer of long experience, one who has built up a successful barn from smaller beginnings and has taken advantage of the opportunities of learning scientific agriculture.

Do not think that these plan books or the plan department are alone going to get you business. They are only instrumental, a help to new business and unless you know how to use them you will not profit very much. Believe in them, talk about them, discuss building plans with every prospective customer and find out just what he is planning for and to accommodate. Then try to post yourself in a way to advise him and get the help from the books or the architectural department.

Centralized Advertising

Centralized Advertising was dealt with in an address by F. W. Hess, who said:—

"In introducing the subject of "Centralized Advertising" I am not recommending it, but bringing it before you for your thought, discussion and decision, and it is entirely with you for disposal.

We all recognize the advantages and the power of advertising and spend, each year, part of our earnings for same, and consequently wish to obtain the best results for our efforts and the money expended.

It is a business matter so we should have the best service and results that our money will buy.

Some of you advertise by novelties, such as lead pencils or carpenters aprons, others by calendars, sent out monthly or yearly, others by posters drawing the attention of the prospective customer to the plans, blut prints and service you give, others by advertisements in your local newspapers, (some well written and very attractive) which no doubt bring good results. Others, indifferently worded and unattractive are consequently unproductive.

Most lumbermen are poor advertisers. Seldom do their advertisements appear as live, catchy and attractive, as do those of other merchants in the same town. Most lumbermen are contented to merely mention the word "Lumber" and then give their name, while other merchants advertise their wares by displaying cuts, pertaining directly to them and their business, as well as briefly lauding their uses and merit. Take the advertisement of a musical dealer. He will advertise a piano by showing a piano, a Victrola, or diamond disc by showing the machine itself, and the pleasure enjoyed by those who own one. Such an advertisement creates a desire to possess one.

Why should not the lumberman in his advertisement show an up-to-date home with its comforts by being built right, or that of a modern barn and thereby draw attention to his wares and their uses.

A retail general store merchant uses display cuts of shoes, hats, coats, clothing and of hardware, stoves, kettles, pans or hammers, which undoubtedly must be helpful, so why should not lumbermen use display cuts of houses, barns, shingles, fence posts, and other commodities. s

Are these desired and can they be best obtained, and can better advertisements be written or suggested through a Central Advertising Department?

This is for you to consider and Secretary Neill will be pleased to explain what he could likely offer you, if you desire such a Bureau."

The Modern Lumber Association—Its Uses and Limits

By A. L. Porter, Secretary of the Western Retail Lumbermen's Association, Spokane, Wash.

I have considered this subject of such importance that I have carefully written it at length. Each statement represents mature thought on the subject. I am not being carried away on the moment by any impassioned utterance, and I wish to guard against the danger of overlooking any important phase in the enthusiasm of impromptu speaking.

That you may not charge me with advancing any Utopian theories, desirable in themselves but impracticable of realization, I shall state here that, in the outline of the Ideal Modern Trade Association I shall give you, I do not offer a "dream child"—it is not a mere word picture of a "consummation devoutly to be wished"—it is the detailed plan of organization and action of the Western Retail Lumbermen's Association.

And this detailed statement I judge necessary at this time, because so many of our own members are not as fully conversant as they should be with the work of their own organization. One of our directors made the statement some short time since that we were ten years in advance of the industry. Be that as it may, I shall state definitely now that we are no more than keeping pace with the demands and with the legitimate requirements of him upon whose favor our industry depends—THE ULTIMATE CONSUMER.

A Trade Association is an incident, arising from the conditions of the industry whose name it bears. Therefore, a proper discussion of the Opportunities and Responsibilities of a Retail Building Material Merchants' Association must be based on a clear knowledge of the history of that industry and a knowledge of its relations to other industries.

The Lumber Industry Has Three Eras

Historically, there are three eras in our industry.

These are clearly marked and defined by commercial epochs, the culmination of conditions inaugurated externally and received passively. And these changes have all taken place within quite recent years.

The first era was that of the LUMBER YARD.

This extended from the time when the first man agreed to supply another man WOOD FOR BUILDING PURPOSES, down to the year when the first maker of ANOTHER BUILDING MATERIAL began to aggressively attempt to increase the demand for HIS goods.

Accustomed methods of distribution—the bulky nature of the materials—and other allied conditions—indicated the lumber yard as the logical point for local concentration and distribution.

The desire for more profits—for more volume—for increased lines and larger fields—perhaps mere inertia—influenced the lumber yard manager to stock and handle these other materials in conjunction with WOOD.

Line after line was added, as recent inventive effort found openings; constantly increasing varieties of goods came on the market and eventually to his yard; until at last, by an easy and natural transition, he entered the second era—that of the BUILDING MATERIAL DEALER.

From that time things moved rapidly, and the coming of the third era was upon us. This was marked by the first offer TO SELL A COMPLETED STRUCTURE FOR A FIXED AMOUNT.

This epoch is the real dividing line between the past and the present, for it evidences, for the first time, the correct understanding of the basic principle which underlies all successful business—THE TRUE RELATIONSHIP BETWEEN BUYER AND SELLER—BETWEEN MERCHANT AND CUSTOMER.

It put into the commercial language of our industry the thought that we must offer to the consumer—ON WHOSE PATRONAGE OUR VERY BUSINESS LIFE DEPENDS—NOT MERELY WHAT WE HAD TO SELL, BUT WHAT HE WANTED TO BUY.

And what he wants is NOT MERE BUILDING MATERIAL: it is a THING MADE OF THAT MATERIAL. The building material merchant himself—you—are the only men who buy building material AS MATERIAL.

In other words, we had been conducting our business under false pretenses; we had been offering a THING when what our customer really wanted was a SERVICE RENDERED BY THAT THING.

He did not, for example, want a BOARD. He wanted, rather the PROTECTION, in the form of a home, which the board would give him.

For thirteen years we have been trying to do as WE wanted to do. I have never heard a paper nor an address made at any conference bringing up the question of WHAT WE COULD DO FOR THE CONSUMER.

"Wood doesn't get out of style" has been a BY-WORD in the industry

for many years; but "Styles change in the THINGS MADE OF WOOD," will be the BY-WORD of the future.

It is not especially flattering that this great basic idea should have come to us as it did and as late as it did. But nevertheless we must accept it and we must act on it. We must march with the times; we must recognize conditions as they are, not as we would like to have them be; we must realize that OUR CUSTOMERS ARE BEGINNING TO DEMAND THAT WE ADEQUATELY SUPPLY THEIR WANTS.

And if we do not do what is demanded of us, we will be eliminated; we will be forced out of business; and if that happens, it will not be because the public did not WANT those services but because we did not GIVE them.

We are ostensibly in business to perform a certain necessary part of the scheme of distribution and that work will be done. It is merely a matter of choice whether we decide to do it ourselves or allow it to be done by some other agency.

And this is the third era—the present era of the PROFESSIONAL RETAIL BUILDING MATERIAL MERCHANT.

I use that name because I believe that we who are now engaged in this business can adopt the name, accept the duties and properly perform them. I HAVE FAITH IN US.

But remember, gentlemen, THAT SERVICE WILL BE RENDERED TO THE PUBLIC IRRESPECTIVE OF WHO EVENTUALLY PERFORMS IT OR UNDER WHAT NAME.

As Retail Building Material Merchants of the Third Era, you have three classes of problems to solve.

Trade Problems to Solve

1. Individual questions of trade, arising in the course of your personal business, which, in the nature of things, you, alone, can solve.

2. Matters affecting your business but of local importance and affecting other men in the same line in your territory and to some extent in other lines as well.

These include such questions as local lien laws, community development, sociability, credit arrangements, and, to some extent, transportation. Such things belong properly to the determination of all men in a given locality, and, for the best interests of all, should be handled by an organization of all parties in interest.

This points to the organization of local associations, which shall assume consideration of, and, to the extent permitted by law, action thereon. Such associations will benefit their members in direct proportion to the limitation of action to the proper subjects and to the energy and ability of their executives.

3. General industrial methods and services affecting your business regardless of location; problems that come under the universal laws of commerce; services that you must render and be rendered if you would retain, much more improve, your standing in the business world.

Such services necessitate the retaining of men who are highly skilled in their several lines of endeavor:—Traffic, Advertising, Insurance, Building, Legal, Editorial, Architectural, etc. And all of these services, TO BE OF THE VALUE THAT YOU REQUIRE, must be the very best obtainable in the open market.

For such services high wages must be paid, for they are a commodity as is your own stock of materials. This primary question of COST places such services beyond the reach, not only of the individual, but of the small organization with a limited membership income.

And yet these smaller merchants are the most in need of just such services in order that they may be better able to compete fairly with their more powerful business rivals from a distance; and the consumer—the customer of these small merchants—is just as much entitled to receive such services as is he who is located where patronage of the very large and highly equipped merchant is practicable.

The solution of this third class of business problems indicates the formation of an organization large enough and comprehensive enough to take care of the several contributing factors and to provide these REQUIRED SERVICES IN THE PROPER QUANTITY AND QUALITY.

These being recognized as the conditions, the next question is, naturally, how to provide them.

If any industry in existence should logically work along proper plans, it is ours; for "plans" are a requisite for the proper ultimate use of the materials we handle.

Develop Your Community

In the planning of an Ideal Association, therefore, I shall begin at the first of things. I shall start with the acknowledged commercial axiom that YOU CANNOT DO BUSINESS NOR HAVE BUSINESS WITHOUT BUSINESS.

To have a business you must have a community which is producing or can be made produce that business. You cannot sell even tombstones in a dead community; and repair work and wagon trade alone will not keep your books always in the "black."

This indicates the necessity for assisting you to develop your community —thereby CREATING BUSINESS. In other words it indicates the necessity for a Community Development Service that will suggest ways and means by which you can stimulate the life of your community and thereby cause an INCREASED DEMAND FOR YOUR MATERIALS.

Such a service must be able to advise along the lines of FARM service as well as TOWN SERVICE. It should show the member how TO ADD HIS TOWN TO HIS SALES FORCE, through the formation of Boys' Clubs, Girls' Clubs, Commercial Bodies of all kinds. It should instruct him how to get the farmers together as well as the townspeople. It should give him practical instruction on How To Sell Homes, How to Sell Silos, and should in a word, equip him to take a leading part in the development of his com munity.

Ten main avenues, each with many details, of trade increase through community development, are described in the series of Service Bulletins published by our Association.

Lumbermen Must Advertise

Still, if your public does not know WHO nor WHAT nor WHERE you are nor WHAT YOU CAN DO FOR THEM, you will not profit. You must let them know these things—you must MAKE THEM KNOW—in a word, you MUST ADVERTISE.

Some dealers complain that mail order houses are injuring their business. They say that people in their territory have bills shipped in before the dealer even knew that a building was contemplated.

And Why? BECAUSE THE MAIL ORDER HOUSE ADVERTISED. And the mail order houses' advertising was better than yours when you did advertise. IT HAD TO BE, for it had to counteract your reputation for square dealing, your service, the power of your presence, your personal argument, your extension of credit, the quality of your materials;—that is, providing you had all those things.

And more than this, the mail order house kept right after your customers. Not for a day or a week or a month—but for years. One of the largest mail order houses in the country said last year, by the mouth of its general manager, that they often followed-up a prospect for three years, but finally landed him. Ever do that yourself?

And still more; these houses keep on suggesting NEW COMFORTS, NEW CONVENIENCES, NEW USES FOR THEIR MATERIALS, to those prospects, until, by force of repetition, the prospect becomes an active customer for that article. And from whom will he buy that article if not from the people WHOSE NAME HE NATURALLY CONNECTS WITH THE THINGS HE WANTS?

Quite true, say you, but you cannot afford to hire such a man; a man capable of producing such appealing advertisements.

Exactly;—and that's where your association comes in. ALL OF YOU TOGETHER CAN AFFORD SUCH A MAN—SEVERAL OF HIM.

One thousand of you together can each hire such a man at one-thousandth of the price an individual would have to pay. You get the same ideas, the same suggestions, and the only difference is that you will have to look after working out of those ideas yourself.

One of our members put conditions into a novel statement when he said, recently; "Your selling advice enables us to get the business BEFORE IT REACHES THE STAGE OF COMPETITION." And we really felt a little more hurt than pleased with his remarks, for, in his enthusiasm over his individual benefits, the writer of that letter had missed the great, basic idea of the Associational work.

We had NOT eliminated competition, as he understood the work. We could not, for, as it happened, we were doing the very same thing, as we had to do, for another member in the same town.

We had NOT enabled either to profit at the expense of the other; that would indeed have had destructive trade effects, and would have meant "competition" as it exists today.

What we had actually done was to point out to each one, the possibilities for CREATING NEW BUSINESS AND HOW TO CREATE AND SECURE IT; and each, following his individual trend, had moved towards the same goal along different roads. Both had CREATED BUSINESS; neither had taken business away from the other; of course, each "got the business before it reached the stage of competition," FOR THERE WAS NO COMPETITION AT ALL.

But now, in order to supply the demand that the Advertising and Community Development departments have helped you CREATE and SECURE, you must get your material to your yard in time, at the lowest rates and classifications and free from all claims from damage, shortage, etc. Or, when such unavoidably happen, you must have those matters so adjusted as to prevent the losses from eating up your profits.

Should Employ a Good Traffic Manager

Here is where you need a good traffic manager. And you need just as good a traffic man as the largest firm in the country; nay, more, for losses that would not affect them in the least would, by the very difference in your size, mean a most important loss to you.

Here again the Association offers relief. The combined resources of all of you can secure the best traffic man open for engagement. And the fact that your Association covers such a territory and with so many shippers, gives that traffic man a better and stronger standing with the carriers and enables him to deliver better service to each of you.

Our traffic department has succeeded in inducing probably half of our membership to use its services. A part of this number, aggregating possibly one-third of the total membership, sent in expense bills for auditing. We collected and remitted some $5,000 last year to those people, an amount which averaged three years dues to every man using the department. And that mony was practically picked out of the waste basket.

We have treated the carriers fairly; we aim for simple justice, not for special favors. And as a result, we have such a standing with the carriers of our territory that each has appointed one man whose special duty it is to attend instantly to any matters we present to him, and to see that they are carried to the most rapid and satisfactory conclusion.

So far, I have spoken only of the ordinary business. There is yet that intensive cultivation that really produces the cream. The profit is made, as a rule, not in the ordinary business, but in the construction of buildings whose beauty, artistry, and convenience, make those structures and those qualities take precedence in the mind of the prospective customer over MERE PRICE.

Must Use Plan Books

THIS, of course, indicates the use of a Plan Book SYSTEM.

Naturally, in speaking of such a service help, I think of the one now in use in this Association, known as the Porter-Ballard Plan Book SYSTEM.

This, as you know, has been opened to legitimate retail building material dealers outside of our own Associational territory, and, though it is only some three years old, the SYSTEM is now in active use in no less than thirty-one states, and has been officially endorsed by eight retail lumber dealers associations.

In this SYSTEM I believe we have paved the way for perfection of dealer service; though, of course, it is to be expected that changes of many details will be made to meet changing conditions.

The SYSTEM is intended to be a complete SALES SYSTEM, and includes not only beautiful books of modern designs for all sorts of buildings but itemized material lists, full directions for using the SYSTEM, advertising helps of all sorts, and a choice of 50 sets of full sized working blue prints and specifications, from 250 different designs; all of this being offered to the retail merchant FOR A SINGLE PRICE.

Remember that the MEANS OF MAKING THE SALE must be just as comprehensive as the SALE ITSELF—all elements must be covered. The Plan Book SYSTEM therefore is intended to enable you to answer all questions and many of the arguments that may arise concerning the structure itself. It is intended to avoid the mistake of offering just the type of houses that PEOPLE ARE NOW BUILDING. Of course, it is necessary to include

some of these designs to meet immovable demand, but you have an educational duty that is paramount, and the bulk of the designs therefore are of HOMES THAT YOUR PEOPLE OUGHT TO HAVE, AND OF HOMES THAT THEY ARE GOING TO HAVE SOME DAY.

MAKE THAT "SOME DAY" NOW.

Failure to provide a seemingly unimportant detail of the sales element may be like the legendary horse shoe nail that lost a kingdom. Take no chances. It's better to be sure than to be sorry. Remember, there is no "second best" in making a sale. It is FIRST or just an "also ran." It is ALL or NONE.

By this time, if you have made proper use of the services provided for you, you will realize that you have a business worth while, and you begin to think of what would happen if you had a fire.

Fire Insurance for the Retailer

Of Fire Insurance Companies there are many; but in line with a COMPLETE SERVICE to the individual, we, in this Association, have covered this item through our own splendid Lumbermen's Mutual Society, which, though under separate management and organization, is handled in the interests of our members, who, alone, are eligible to secure indemnity.

By limiting our hazards to the one high-class type of fire risks, we can provide ample indemnity at the lowest possible rate; this again being an advantage secured through association that the individual could not obtain.

Remember also, that insurance history shows that no strictly contractural society, specializing in a single hazard and with honest executives and proper safeguards, such as obtain in our own Society, has ever failed in business, has ever failed to adjust and pay promptly and fully all losses, has ever failed to carry indemnity at a lesser rate than had been charged by (so-called) "Board" companies prior thereto.

It needs no great office or field force; no elaborate accounting department; it handles preferred risks so widely scattered that any severe loss is practically beyond reason, and its cost per unit of doing business will decrease with its growth; a very substantial reason for your patronage.

The Value of a Good Cost System

By this time, unless you have been exceedingly fortunate, you will have accumulated some bad debts. Here, again, through an Accounting and Collection Department, the Association comes to your aid. Experts in cost accounting will aid you to know WHAT YOUR BUSINESS IS REALLY DOING. AND a Collection Agency, backed by the power of an Association covering a large territory, has a better chance of finding debtors and bringing them to time, than any individual.

And this question of COST ACCOUNTING is of such extreme importance that I hope to see the day, in the near future, when every individual in every industry will handle his business along accounting lines devised and formulated by the brightest brains in that industry.

The foregoing are, of course, general subjects which appeal to all retail building material merchants; but there will be many questions involving local and personal matters that you will want solved.

Here again, is an advantage of an association. Constant communication with members all over the entire territory and constant study of multitudes of questions, gives an outlook of a breadth no individual could possibly secure.

While business varies in the item, yet, in the same industry those matters run along similar general channels, and the experts at your headquarters will become familiar with those channels so that they will be able to give you specific aid on practically everything that is in the least liable to happen.

For instance, some of you might want to improve your ability to read plans or to make estimates, and so forth. Not to become architects but better merchants. When that question was posed to us we spent several months, in collaboration with one of our largest correspondence schools, and perfected a special course, backed by our practical knowledge and the school's superb corps of instructors.

A pleasingly large number of our members are using this course, and we have received a number of inquiries from the managers of retail yards outside of our own territory—men who wanted to know better how to show the consumer the way to get the value from the material after it had been sold. These we referred direct to the International Correspondence Schools, with the result that Vice-President Foster, in a recent letter, said: "It begins to look as if it would be well for us to prepare and issue considerable printed matter regarding it." It is evidently a matter of interest and value to the INDUSTRY and not alone to your ASSOCIATION.

Some members wanted to become better salesmen. We secured a lecturer on Scientific Salesmanship, of international reputation—Dr. Stanley Krebs—to write a series of articles specifically adapted to our industry. This series, with appropriate illustrations, we published in our monthly magazine; besides giving our members the opportunity of hearing Dr. Krebs in person on several occasions.

An Association should be able to advise its members WHEN, WHERE and HOW to buy the goods they carry in stock. Not necessarily to favor one manufacturer at the expense of another equally good, but to provide information which will ENABLE OUR MEMBER TO GET WHAT HE WANTS.

Then, to bind all together, some sort of means should be provided for keeping in touch with each member; of sending to each member the information gained each month, or other suitable interval, on matters of interest to the industry at large, and especially in the territory of the Association.

This condition we have met by the publication of a monthly magazine, which, I might say in passing, is the only magazine in existence, the official organ of a lumber organization, which is entered in the U. S. Post Office Department.

What a Lumber Association Represents

I have apparently devoted more time to the individual than to the Association; but bear in mind that the individual is the really important factor. The Association exists only because of the individual and for the purpose of enabling him to do, through associated effort, what he, alone, could not do. The Association, therefore, represents, and can properly only represent, the combination of the energies, abilities, experiences and knowledge of all of its members.

The INDIVIDUAL comes first, and his needs brings forth the ASSOCIATION.

And let me emphasize the fact that no Association can do what I have said it SHOULD do, unless every unit which composes that association is individually equal in PREPAREDNESS to the Ideal of the Association. There must be no "specked apples" in the barrel.

When the members fail to do their duty in the matter, there should be no blame attached to the Secretary or Manager. The conquests and triumphs of Napoleon depended on the equipment, the fighting ability and the loyalty of the single soldier standing guard on the lonely outpost.

In Iowa the citizen soldier who fails to attend the meeting of his company is sought for and conducted to the place of his duty by the sheriff. It may be humiliating, but it is the right thing to do.

An Association, if it attempts to carry on a policy of militant effectiveness in the interests of its industry, must be composed of trained and willing soldiers.

It would be far better to send the sheriff to compel a member to attend the annual conference of his trade association than to send the sheriff to close up his place of business.

"But," you will say, "now that I have all of those services my competitor will have them too. How is that going to affect or alter competition?"

Why, bless you, if you have to ask such a question, it's an indication that it will not help you very much.

What is Competition?

COMPETITION!

To paraphrase Madame Roland: "Oh, Competition, how many business crimes have been committed in thy name!"

Is it not somewhat amusing to see the wonderful attempts that have been made to bolster up this economically unsound condition?

Competition has been made the theme of serious addresses and weighty books by learned and famous economists.

Our legislatures have passed statutes in its favor and the courts have been biased in its behalf.

No. Let me modify that last statement. Not ALL of our judges have been biased. One, at least, has indicated that he realized we were all working in a blind alley.

Justice Holmes, of the United States Supreme Court, in his minority opinion in the case of Dr. Miles Medical Co. vs. Park & Sons Company, reports in 220 U. S. 373, said:

"I think that we greatly exaggerate the value and importance to the public of competition in the production or distribution of an article as fixing a fair price. WHAT REALLY FIXES THAT IS THE COMPETITION OF CONFLICTING DESIRES. We none of us can have as much as we want of all the things we want. Therefore, we have to choose. As soon as the price of something we want goes up above the point at which we are willing to give up other things to buy that, we cease to buy it and buy something else."

It may seem strange that this great lesson of modern merchandising should have come, not from a merchant, but from a lawyer; but please remember that the business of that lawyer was to study business conditions so that he might more capably interpret the law of the land.

Justice Holmes had made a thorough study of the conditions which underlie all business and he had the inestimable advantage of getting facts, on which to predicate that study and his conclusions, from actual conditions and relations as shown by the big men in business, through cases submitted for his consideration.

And at that, how many people who read that decision, really grasped the great big idea?

Only four little words—that was the gist of his opinion. But those four little words locate, define and limit modern merchandising.

"COMPETITION OF CONFLICTING DESIRES."

Let me translate that thought of Justice Holmes' into the phrase which, enunciated some three years ago, has become almost a slogan for our own Association:

"Competition of Conflicting Desires."

"The right way to sell lumber is not to try to sell it at all but to do those things which will create a demand for what you have to sell."

Competition? Competitor? When you speak of your "competitor" just what do you mean?

Your only competitor can be that merchant in your own industry, in your own distribution territory, who has the same stock, the same knowledge, the same energy, the same financial strength, as you. If there is any difference in any of these elements, then the balance of results will sway towards the better equipped and true competition will become, in the vernacular, a "cinch."

Competition is possible only on horizontal lines, just as combination moves on vertical lines. The higher you rise in the scale, the less competition you will have.

Let me illustrate. Successive steps in our industry, in the working out of a sample transaction may be represented in this matter.

The illustration represents a town with three yards; a fairly good average of the entire country.

If you are ONLY a material man, the only competition you will have will be with OTHER MERE MATERIAL MEN.

If, however, you add to your equipment, by combination, a knowledge of your materials and their uses, you rise above the "Material" plane of former competition and your only competition will then come from some one equally well equipped.

The higher you rise—the more of the necessary elements of the complete transaction you assume to supply—the more independent you become of any one who would supply what you lack—the smaller becomes your field of competition and the greater your chances to secure the trade.

And that rise in the scale depends entirely and absolutely on each one of you, individually. And because you do differ individually, the results will differ; though through Associational services you can at least be assured of an even start.

You will eventually differ, no matter how evenly you start; but the better you are equipped to serve the public, the more the public will come to you to be served. That's what they want and that's what they are going to have—somehow.

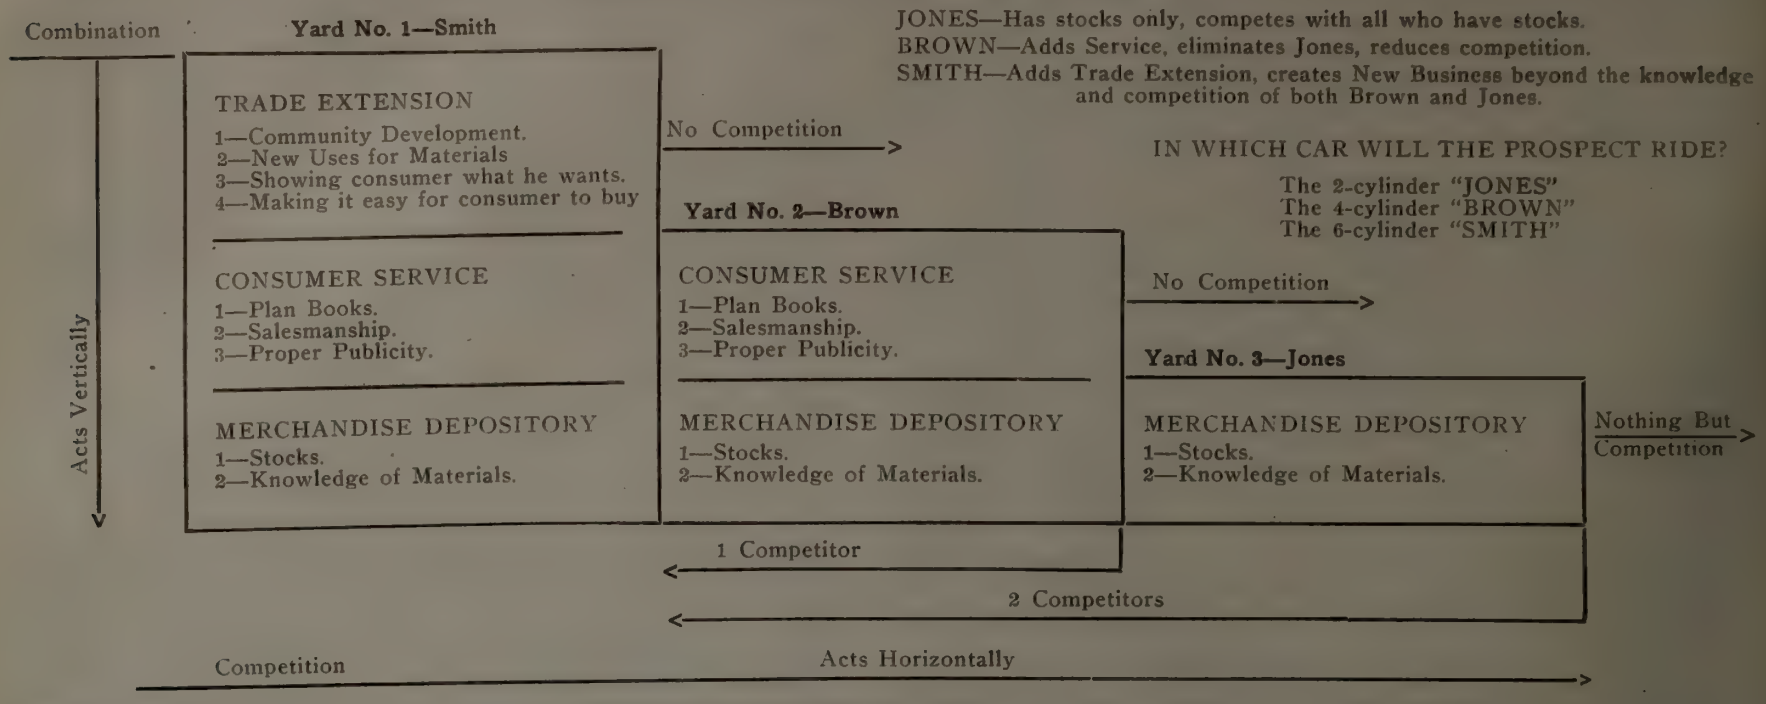
One retail lumberman said not long ago that he was going to stop "talking service," because he didn't see where it did him any good. It didn't—simply because that's just exactly all he did—TALK SERVICE. He didn't GIVE SERVICE.

Service—adequate service—is your only hope of salvation.

But it is not Servile Service. No—it is a man-to-man, face-to-face, equal exchange of what each has for what the other has, to the satisfaction and profit of both.

And let me once for all put a bomb under the hideous old idea of "master

GRAPHIC VIEW OF 3-YARD TOWN



and servant." In the olden days, when human bodies were made chattels by law, that relationship existed; but in these present days of legal, moral and political freedom, it has no place.

I acknowledge no man as my master—I accept no man as my servant. I acknowledge only that relationship of joint interests in which each gives what he has that he may receive what he wants.

I acknowledge your right as a consumer to deal with my competitor, but I just as firmly claim the right to offer my goods or my services to you on an equal footing with my competitor.

And I especially and emphatically deny to my competitor the right to hazard my own good name as a fellow member of this industry by doing something which is not legally right nor economically sound, and which will thus reflect on ME on account of my being in the same business.

There is no force to compel anyone to enter or remain in this business. If you do so, it is your official notice to the world that you believe you are better equipped to succeed there than in any other business.

When you entered this business, you said to the world: "I will make a better retail building material merchant than anything else." And in how many cases will the world reply: "Well, if that's the best you can do, thank goodness you didn't try something which might have affected my welfare more."

Competition? When I see some of our present day lumber dealers—peddlers of plank—talking of "competition," it makes me think of the man who jumped from the top of his house believing an umbrella would do as well as a parachute. You admired his nerve but you had a mighty small opinion of his brains.

Competition? Suppose that every retail building material merchant in this territory would pose himself THIS question:

"Where is the good, the value, the economic necessity, of HAVING THE OTHER FELLOW COMPETE WITH ME?"

Imagine the several companies of a regiment fighting among themselves to see which should attack the enemy.

You don't have to imagine several retail lumbermen in a given town fighting each other to see which will "land the order." You see it everywhere—everyday—YOU ARE DOING IT YOURSELVES.

And isn't it supremely foolish? ISN'T IT PLAIN BAD BUSINESS?

Here is a prospective customer, WHO WANTS SOMETHING YOU HAVE FOR SALE AND WHICH YOU WANT TO SELL.

Instead of aiding that prospect to get what he wants—or as Justice Holmes would say in his delightful way, aiding him to clarify his conflicting desires—what do you do?

You forget all about that prospective customer and you put your best thought, your best ingenuity, your very reputation as a good business man, to the task of determining, NOT HOW TO SATISFY THAT CUSTOMER BUT HOW TO PREVENT THE OTHER FELLOW FROM DOING IT.

The business, or rather what should be called the possibilities of the retail building material industry have not been more than touched. A very small percentage of visible trade has kept the industry alive to date.

If the same energy was put into DEVELOPING THE TRADE POSSIBILITIES that is now being put into trying to KEEP THE OTHER FELLOW FROM GETTING A SHARE OF THE VISIBLE TRADE, every man in the industry would prosper.

And that would be but the smallest effect, for when the retail building material merchant in a community is HONESTLY AND LEGITIMATELY PROSPEROUS, then that community must also be prosperous; and that condition of communal prosperity will necessarily re-act in turn on an INCREASING PROSPERITY FOR THE RETAIL BUILDING MATERIAL MERCHANT.

Possibilities for Trade Extension

Developing trade! A man in Spokane was called on one morning by a youth with a sample case. It was early fall. The agent told this man that he had seen a notice in the local paper of the new occupancy of the house and wanted to interest him in screens. His goods were right—his prices were right—and the man gave the order. The screens were delivered and put in place on the man's house. Now, the point of this story is that those screens came by water around the horn from Portland, Maine, to Seattle, and then to Spokane by rail. Also that man had not before, nor has he since that time had a single word said to him about screens on his house by any of the local dealers in Spokane. And I can vouch for the truth of that statement—FOR I AM THAT MAN.

Does that indicate any POSSIBILITIES FOR TRADE EXTENSION?

Just think for a moment of the result if only you members of this Association should honestly decide to become MODERN MERCHANTS, with all that those words signify. Just think of the tremendous wave of prosperity that would spread over the Associational territory—over the entire country.

And this is not a dream. It can be done.

It will take time. It has taken years of drilling to get some of these supposedly clear conceptions of real, modern merchandising home to some people, but the leaven works.

Every day I note where some one has created business where it was not seen before.

Every day I see the old-fashioned cut-throat competition giving place to the modern emulation.

And in every case the retail building material merchant has prospered financially.

As Elbert Hubbard said: "I am an old man and I have had many troubles—most of which never happened."

Competition is all right in its place, but that place is NOT where it has been. Compete with your own PAST BUSINESS METHODS instead of with your PRESENT FELLOW MERCHANT, and you will find that most of your business troubles "never happened."

Again, me thinks, I hear a still, small voice:—

"That's all very fine. But suppose someone ships into my territory or suppose some other dreadful thing. How are those fine ideas of yours going to stop that? HOW IS THE ASSOCIATION GOING TO PROTECT ME?"

I still get an occasional letter like that, though they are getting quite few of recent months; but it still has a bad effect on my temper.

Should the Retailer be "Protected"?

PROTECTION. Is this a Sunday School class of children, or is it an organization of red-blooded men? Is this the great Caesar crying pitifully from the waters: "Help me, Cassius, or I sink?"

Last December, President Wilson said at Columbus, Ohio:—"American business men have been timid. They have constantly run to Washington and said: 'It looks like rain. For God's sake give us shelter.' You do not need Washington. There is genius enough in this country to master the enterprise of the world and not to ask odds of anybody. I would like to have the thrilling pride of realizing that there was nobody in America who was afraid to match his wits with the world."

Why, gentlemen, just suppose for a moment that this Association could do, under the law, what is asked of it in this matter—could build a Chinese wall around each of your trade territories and "protect" you against all outside competition. What would you be willing to pay for membership and what would it be worth? $12 a year? $100 a year? $1,000 a year and on up and glad of the chance.

But it cannot be done—not that way. And besides, the very idea should be repugnant to a real MAN. There is no law compelling him to be in this business. I am in it because I feel that I can do better in this line of work than in any other. But I can quit. And so can you. I play golf because I like it; but I can play tennis if I want to.

I AM BOSS OF MY OWN ACTIONS.

No association can do this "protecting" act, but each member, or each individual outside of the association, can "protect" himself. You can do so by making your services so valuable to the only power on earth which has the making or breaking of your business—the CONSUMER—the Man-With-

The-Money—that no outside business, man or firm, can break the bonds which tie the consumer to you and to your business.

THAT way is legal; THAT way is the glorious way of beating the other fellow in a fair, honest, smiling, man-to-man fight.

To have the Ideal Trade Association, you must first of all make yourselves individually fit and worthy to belong to such an Association.

You must make yourselves, gentlemen, so strong in your own line of business that you will take your proper standing in your communities, honored, respected, prosperous. And then only can you make of your Association such a body that you will be proud to place in your windows, where all may see, your certificate of membership.

The Ideal Association should be a real getting-together; it should be the accredited and official representative and mouthpiece of the industry.

It should act in harmony with all other industries, with the STATE and Federal Governments, with the educational institutions and commercial organizations.

All Branches of Industry Should Co-operate

And above all it should co-operate with every branch of the industry itself. Remember that the owner of the primary raw material is the first link in the chain, the last link being the yard clerk who receipts to the Ultimate Consumer for the last payment on the little Home; and each link depends on every other.

IT TAKES THE COMBINED ACTION OF EVERY BRANCH OF THE INDUSTRY TO COMPLETE THE SALE ON WHICH THE LIVELIHOOD AND PROSPERITY OF ALL AND OF EACH DEPENDS.

A sale is never made to the "people"—to the mass—but to the individual. And as that sale is the exchange of money for a board, cut by the logger, surfaced by the manufacturer, stored by the wholesaler, and delivered by the retailer, it follows that each is a necessary and interested link in the SALES CHAIN.

The logger should be just as much interested in the way you meet a customer as you should be in the way he cuts his trees. The manufacturer should be just as much interested in the care your yard man gives to the stocks as you should be in the way those boards are made, graded and shipped.

A strain on any link weakens the entire chain. A failure of any branch to fully and properly co-operate with the others for the real object of all—THE SALE TO THE ULTIMATE CONSUMER—jeopardizes the business welfare of everyone connected with the industry. And accordingly, everyone is interested in seeing that the others DO THEIR PROPER SHARE IN THE WHOLE WORK. Lack of real co-operation is, to put it the mildest way, just PLAIN BAD BUSINESS.

Now gentlemen, to sum up briefly what I have said:

What Constitutes the Ideal Trade Association

1. THE Ideal Trade Association of the future must officially represent the highest ideals of its industry;

2. It must assist its members to attain a standard of merchandising and of citizenship which will make them fit and worthy to be retained as members;

3. It must act for the people by aiding the industry it represents to properly meet—and anticipate—public demands in the class of goods or services in which it specializes;

4. It must co-operate with the public and all other industries in order to better take its proper place in the general scheme of commerce and of life;

5. It must be composed of men who are proud of it and of whom it is proud; men who understand the powers and limitations of association; men who will work to make it better and stronger and nobler, year by year; MEN, REAL MEN.

6. It must be an ASSOCIATION and not a JUNTO, A Uniting for a Common Good and not an Agreement for Private Gain; it must be a source of ispiration and growth and not a means of trade strangulation and depreciation.

Gentlemen, the day of the old Association has passed. Your work in the New Association has just begun. You have before you the most marvelous opportunities ever vouchsafed to any industry since the beginning of time. I believe that you have the ability and the energy—I earnestly pray that you have as well the desire and the intention—to accept the Responsibilities and to take advantage of the Opportunities that lie before you.

The Inch Board

The inch board is the most important single item in the lumber industry, and the general prevalence of the inch board together with the cast with which it may be obtained has led to its adoption for many uses that primarily called for other thicknesses, says Hardwood Record. For example there is nothing unusual today about seeing church pew ends, barber chairs, frames and other thick work made from inch boards glued together in whatever thickness is desired. This is especially true in oak. In birch one may find thick stock used for arms and frames more commonly than in oak, and now and then one finds the thick stock in oak, but there is enough use of inch boards built up into thick stock to cause some wonder as to just why it is.

During the winter there have been calls for thick oak, which have brought out the fact that as a rule there is a very limited quantity of thick oak made, the greatest percentage being inch boards. Buyers seeking wagon and implement stock have cleared up in some of the hardwood lumber centers such items as 2½, 3, 3½ inch oak plank, and while this created a little flurry in the lumber situation, it is found after a thorough investigation that demand that would clean up all of such thick oak would really take up only a small percentage of the oak lumber stock on hand.

The inch board is a much more important item in the lumber trade today than it was ten or twenty-five years ago. In the days gone by there were periods when inch oak was made only in limited quantities and most of the accumulation came from siding and from reducing logs to specific dimensions. In the earlier days many of the boards were made two inches thick and three inches and a fair percentage 2½, 3½ and 4. Today when one compares the total of thick planks with the lumber cut, the item is rather insignificant.

There are several explanations for this change in lumber stock dimensions and for the general prevalence of the inch board. There is not so much call for thick oak as formerly. Thick oak was used for all kind of tanks, tubs, hogsheads and vat work much more extensively than it is today. When this call was general nearly every oak mill cut much of its best stock into thick oak planks, and a fair percentage of the common stock into two inch oak and even a fair share of three inch oak for bridges and railroad crossing planks.

Today the best demand for high-grade thick oak is for flitches to be made into quartered veneer. Naturally the man who has good stock for thick oak is inclined to reduce it to quartered flitches and market it green to some veneer mill, or put in a veneer saw and work it up himself. This demand consumes much oak that originally went into thick planks. Meantime the market for thick oak has been so erratic and uncertain from year to year that some millmen have become afraid of it. At certain periods in the past those who have had a stock of thick oak at the right time have made a sort of killing with it, but this happens only once in a while and between times it is often found expensive to carry. The result is that people turn more to inch oak and today the inch board is easily the biggest thing in the oak lumber market.

Whether the inch board should continue in this prominence or whether other thickness should be used is a question that needs serious attention on the part of the lumber fraternity. This question may take in many other hardwoods than oak. The inch board has become such a habit in all lines of hardwood that when there is a slow period and an accumulation of stock it is always found that the biggest part of this burden is in inch boards.

It is time for the lumber manufacturing fraternity to make a careful study of the consumption of lumber in the various lines of importance to the end that there may be obtained some guiding light as to the comparative quantity which should be made in inch boards and in other thicknesses. Now and then we see evidence of a need for various other thicknesses which give a hint that profit might accrue from a more careful study of the needs of the country.

The inch board is an easy thing to make and it is so standardized that it is sure of a market at some price some time or other. This is easily the explanation of why we have so many inch boards, but it is not a good enough reason in this age of analytical study and specializing. The first advance scored in the lumber market the past fall was in 5/4 and 6/4 gum boards, not inch boards. The box factory trade needed boards for resawing that were a little thicker than the regular inch stock, and those who had been thoughtful and forehanded and had cut a fair percentage of 5/4 and 6/4 boards found the first and best market, and even today where there is a demand for this thickness it generally carries with it a better price comparatively than is offered for inch boards.

An arrangement has been made between the B. C. Electric Railway and the Transcontinental Railway which will give lumber and shingle mills in the Fraser Valley the same out-going freight rates on forest products as are enjoyed by mills at Vancouver. It is understood also that the Canadian Northern Railway is a party to the agreement. Hitherto Fraser Valley mills have paid an arbitrary rate over and above the terminal rates charged to mills at Coast points such as Vancouver. This arbitrary rate, in the case of Fraser Valley forest products, was from 1½ to 2 cents above the straight Vancouver terminal rate. On a car of average capacity the extra cost thus figured out at from $6 to $12. The reduction applies to all mills connected with the Transcontinental by the B. C. E. R. and its subsidiaries, extending from Steveston east as far as Chilliwack, but is confined at present to shipments consigned to eastern Canadian points. It is expected that a similar reduction will be arranged on shipments to Eastern United States points, in the near future. The understanding is that steam lines concerned will absorb the arbitrary rate, themselves paying the cost of hauling over the B. C. E. R. to their nearest connecting lines. This concession will enable Fraser Valley mills to compete with Vancouver mills on a basis of quality.

W. Mark DeCew of the Western Pine Lumber Company, Grand Forks, B. C., in a recent interview, said that the lumber situation in B. C. is excellent, with the prospect of a large volume of business during the present year. The mill at Grand Forks, he said, was being put in shape for operation, after being closed down since 1914. The cut of the mill will be about 6,500,000 feet. A number of orders are already on hand for immediate shipment. Mr. DeCew believes that similar conditions exist throughout the whole lumbering district in the interior, the bulk of the orders being for the prairies, for the construction of farm buildings.

Summing Up Business Progress

Are you sure that you are, at all times, in possession of sufficient accurate and detailed information regarding the inner workings of your business to allow of your knowing exactly where you are at?

Do you know positively whether or not your business is in better shape this year than it was last? Are you sure you are a better lumberman now than you were two years ago; a better one two years ago than you were three years before that?

Or are you only guessing when you say to yourself that the conditions surrounding your own particular business are better or worse than they used to be? Are you taking too much for granted when you assure yourself that you are a better man than you were formerly?

Are you judging your business and yourself almost solely by the fact that your bank account is larger at the close of each succeeding year, and finding it substantially so, are you allowing yourself to be content with the knowledge of that fact instead of setting to work to find out just why it is so?

Or, perhaps your business is one of the other kind. Perhaps you find that, in spite of your most diligent efforts; in spite of the fact that you are working and worrying yourself ill, your business shows little or no profit at the close of the year, or showing a profit you find it is each successive year a decreasing one. Perhaps, realizing this, you have about made up your mind that the retail lumber business is not what it formerly was, and that you would perhaps be better off out of it.

If you are one of the latter, are you positive that it is the business and not yourself that is at fault? Are you positive that you are correct in your surmise that the business has "gone to pot?" Are you sure that under your present system of doing business, you know exactly what the conditions obtaining in your business are? Are you sure that you are in possession of sufficient accurate information regarding your business to allow you to formulate an intelligent opinion regarding same?

In either case, whether your business is or is not fulfilling your ideas of a proper profit-maker, you of course feel that you are not overlooking anything. It is but natural that you should feel so. But have you sufficient grounds to warrant the stand you are taking?

How Much Have You Advanced?

In the matter of your being at the present time a better lumberman than you were a few years ago, undoubtedly you are so, but are you enough better? You were bound to improve with added experience. Have you improved as greatly as you should have? Has your progress been as marked as that of your competitor?

Figures, properly handled, do not lie; improperly handled, they do lie, and notoriously. That they do so, however, is not their fault. They are made to do so. And they are made to do so by the mental processes of those very ones for whose benefit they were intended. And nine times out of ten, they are made to do so because of the fact that they are not, of themselves sufficiently complete to enable their owner to attribute to them their true value. They are so incomplete that they lend themselves naturally and readily to that warping and distortion which eventually results in the drawing of entirely erroneous conclusions.

To express it in another way: Too few figures are almost as bad as none at all; in fact, they are sometimes worse.

Figures regarding your particular business can be made to answer the double purpose of enabling you to determine what, if anything, is the matter with your business and to establish the fact, beyond a doubt, as to whether or not you are a better man than formerly. But to do so they must be complete. They must cover every phase of your business.

And they must cover the same points, in the same manner, year after year. For, bear in mind the fact that such figures become increasingly valuable each successive year. For they afford comparisons, and by comparisons everything in your business should be regulated.

What About Ledger Accounts

To start with, how about the accounts in your general ledger which have to do with all the expenses incident to the handling of your business? Are you sure that you have enough of them? In the matter of salaries and labor, have you these items so divided that you can place your finger immediately upon a sudden increase in any department? Do you know, at all times, what it is costing you to run the office end of your business? Do you know whether or not the amount paid in salaries, to those upon your monthly or yearly pay roll, is responsible for the increase or decrease in your pay roll, or whether the amount of day labor hired for the yard end of your business is responsible for such increase or decrease?

Do you keep your stationery account separate from the other incidental expenses of your business, so that you may at a glance know whether or not yourself or your force have contracted extravagant habits regarding the use of this article?

Do you keep a separate account to which all expense incident to the unloading of incoming stock is entered? This should be done and the total taken from the ledger at the end of each year, and divided by the total of board feet unloaded into the yard during the period. When this is done, it is possible to arrive at the unloading cost per thousand, and so compare with that of the previous year with a view to determining whether or not it is becoming excessive.

If you make deliveries about town, how about your teaming expense? Do you keep this in a separate account? If so, there should be included in this account all items of expense incident to the maintenance of teams, wagons, harness, or, if such are used, of automobile trucks. All monies expended for hay and fodder together with teamsters' salaries should be included in this account. At the close of the year this should also be figured on a per thousand basis.

How Much Does It Cost?

Is your labor account in such shape that you can figure out the total cost of the labor incident to the handling of your lumber on a per thousand basis, after you have closed your books for the year? If not, it should be so kept as this item is one of the largest individual ones entering into the cost of doing business at the average retail yard.

Do you post all amounts expended for maintenance and upkeep of your yard, including repairs, etc., to a separate account?

If your heating bill is of such a size as to merit serious consideration, do you keep it in such a manner that you can readily determine whether or not it is increasing.

Your insurance and taxes may be included in one account inasmuch as these necessitate the making of but few entries during any calendar year, and the vouchers therefor are at all times readily available.

Do you keep a record of all donations made, in such a manner as will allow you to determine whether or not this expense is fast becoming a burden?

If you rent property, year after year, instead of owning, the rental may be included under the same account with your ward maintenance, inasmuch as it is usually a fixed lump sum and can be readily separated if so desired.

Do you charge depreciation upon both plant and personal property against your gross profits at the end of each year? This is important and just as correctly a charge against your business as are your other expenditures.

Are you charging against your gross profits for any one year interest at the going rate upon all capital, either owned or borrowed, which you may be using in your business? This should be done inasmuch as it is a perfectly legitimate charge and because of the fact that your failure to do so might lead you to believe that you are actually making money when you are in fact losing.

The number of general ledger accounts necessary for the proper handling of your business, will of course vary according to the manner of business you are doing. To attempt to stipulate just how many and how they should be kept so as to cover all the varying conditions incident to different yards, is of course an impossibility. A very good rule to be guided by, however, is that you should have your operating expenses posted to enough different accounts in your general ledger, so that the amount of each item of expense can be readily arrived at.

How About Your Stock Account?

Passing from the matter of your general ledger accounts to that of your stock, do you keep a piece tally in connection with your business, so that you may know at all times exactly how many pieces of each item of stock you have on hand, what your purchases of each item during a certain period of time have been, and what your sales of each have been? Personally, the writer believes that a piece tally, should be kept in connection with every well regulated lumber business. Having this at hand, you are able at all times to judge accurately of the condition of your stock, and to compare the quantities on hand of each item with those of any other month during the existing year or with any other month of previous years. This affords you an opportunity of knowing very quickly as to whether or not the stock you apparently find it necessary to carry in the conduct of your business is increasing. Being able to determine this, quickly and accurately, you are in a position to set about to find a remedy for existing conditions in this department of your business. As an aid to buying the piece tally is most desirable.

Do you make a practice of figuring up the average value of your lumber stock per thousand at the close of each year's business? Also of arriving at an average value for your other items, such as doors, windows, etc? This information is valuable chiefly in a general way and should be used for comparison with values of previous years; in order that it may fully serve its purpose, it should be worked into a comparative statement.

Do you keep an accurate record of sales of different items of your

stock? You of course keep your lumber sales separate from all others, so that you may determine at a glance what percentage of your total business is lumber. But how about lath, shingles, posts, lime, cement, plaster, windows, doors and millwork? Mill work may all be included in one account, but the others should all be kept separate and the percentage the sales of each bear to the total for the year, should be figured out at the close of the year's business. An average selling price per thousand should also be figured out on your lumber and an average price upon all other items.

How about your side lines and the substitutes for lumber that you may be handling? Do you keep an accurate record of your sales of each of these? This must be done in order that you may pro rate your costs of doing business.

Separate purchase accounts should also be kept for each of the items mentioned above. Thus having separate purchase accounts and your separate sales accounts and having your inventory at the close of the year you are in a position to figure your gross profit upon each without a great deal of difficulty. Having done this, be very sure that you pro rate all your expenses, and charge its proper share against each one of the items. By doing this you know at a glance which has made you the most money and which, if any, are losing you money. Do not attempt to make your lumber carry more than its just share of the expense. If you find that it is necessary to do this in order that you may delude yourself into the belief that certain items are making you money when in reality they are not, keep away from it. Either make these items show a profit, after carrying their just share of expense, or discontinue the handling of them.

Do you keep an accurate record of all sales, month by month of each year, and work this into comparative statements, employing similar data from the preceding years? By doing this you are able to tell at a glance what, if anything, is wrong with your volume of business.

Do you keep an accurate record of your outstanding accounts and bills receivable at the close of each month's business, figuring the percentage these bear to your total sales for the year and then compare the results with similar information obtained from your records of other years? This is important if you are to know how you stand upon the credit end of your business.

Do you figure your percentage of expense based upon the volume of business done at the close of each month, and compare it with similar percentages of previous months? This is of course most important. Having your different items of expense in such shape that they are readily available at the close of the year's business you are in a position to figure each of them out upon a per thousand basis, after deducting a proportionate amount for items other than lumber. Thus you are able to figure exactly what it is costing you to merchandise your lumber and how this cost is apportioned. Any serious fluctuations as compared with previous years can thus be readily seen and steps taken to remedy any adverse conditions.

Considerable of what has been said may appear to many of you to entail the employment of much useless red tape. Such, however, is not the case. In order to conduct a retail lumber yard successfully in the future it will be necessary to do all the things mentioned and many more. And the sooner those of us who are handling a yard get into the habit of doing these things, the easier it will be when the time really arrives when not to do so will spell failure.

—I. B. Hanks, in the Mississippi Valley Lumberman.

To Be One of the Largest Plants in the World

Work was started early in February by the Vancouver Creosoting Company, Limited, on its large plant for the treatment of lumber products, which is being erected on the Lonsdale Estate property, North Vancouver. The piling and bulkhead work is being done by Palmer Bros., contractors, Vancouver, and the filling by the Pacific Dredging Company. The site comprises 500 feet of water frontage with extensive foreshore rights. The buildings, tanks, etc., will be erected on piling and about twelve acres will be immediately utilized according to the present plans, but the area actually available is about 22 acres. It will be a treatment plant exclusively—there will be no sawmill in connection, it being the intention of the promoters to purchase lumber, timbers, ties, etc., from the established waterfront mills and tow same to the factory to undergo the various creosoting processes. The concern in a few years is expected to expand into one of the largest of its kind in the world, and starts off with a fully subscribed capital of $300,000. The estimated initial outlay on property and plant is $200,000, which will leave ample working capital, the lack of which, as pointed out by Mr. J. B. Johnson, one of the local members of the new firm, is the rock on which so many new concerns come to grief within a short period after starting up. One and one-quarter million gallons of creosote have been purchased in Japan, and work on the holding tanks will be rushed so as to be ready to handle the first shipment, which is expected to reach Vancouver early in May. The company expects to do some rail trade, but the great bulk of their output will be shipped by water.

Briquetting of Sawdust on a Commercial Basis

By R Thelen, Forest Products Labratory, Madison, Wis.

The utilization of waste sawdust, chips and shavings in the manufacture of the artificial fuel commonly known as sawdust briquets has been carried out on a small scale in several European countries for a number of years, but it has been only recently that this industry has gained a foothold in America. There are now at least three concerns upon the Pacific coast engaged in the manufacture of sawdust briquetting machinery, and at least three plants for the manufacture of this fuel have been established there.

In general, the sawdust briquet is made by compressing previously dried sawdust or shredded wood in a heavy press, the hardness of the briquet depending upon the process used and upon the pressure applied.

In some systems, especially those intended to operate upon the sawdust of resinous woods, the resinous material in the sawdust serves as a binder to hold the briquet together, and a very heavy pressure produces a very firm and hard briquet. In other systems, some sort of binder is mixed with the sawdust before compressing, this binder often being coal-tar pitch, petroleum refuse, or waste liquors resulting from the manufacture of paper pulp by the sulphite process. Still other systems rely entirely upon mechanical binders; one company uses a wire tie which encircles the briquet, and another uses a tarred jute cord which runs throughout the length of the briquet.

The preliminary drying of the sawdust is a very necessary step, since it is practically impossible to make wet sawdust cohere properly, and the problem of drying has been a stumbling block of serious proportions in more than one installation. The actual drying of small quantities of sawdust is a very simple matter, but it has been the design of a mechanism for the continuous drying of large quantities which has presented the difficulties. Either live or exhaust steam is used almost exclusively in the drying operations, the sawdust passing over steam heated plates of floors being carried along in a stream of air which has been heated by forcing it through steam-heated coils or pipe or in some similar manner. If a binder is to be added to the sawdust, this is usually mechanically mixed in just before the final heating takes place, the mixture being fed into the machine through steam-heated hoppers and pipes.

Operation of Different Machines Similar in Principle

Although the various presses differ greatly in the details of their construction, most of them work on the cylinder and plunger principle, the plunger being driven by means of crank and connecting rod or by some toggle joint system of levers so designed that it is capable of exerting a very great pressure at the end of the stroke. Practically all of them, also, are automatically fed, the only attention required being to provide a supply of raw materials and to attend to the power removal of the finished briquets. In systems in which binders such as pitch are used, and in those in which the resins of the wood serve as binders, it is necessary to provide a long cooling trough for the finished briquets. These troughs are sometimes as much as 150 feet in length. In systems using mechanical binders these cooling troughs are unnecessary.

Practically all of the European machines use some kind of binder mixed with the sawdust or rely upon the resinous material in the wood to hold the briquet together, but American and Canadian inventors have apparently preferred the mechanical binders.

One company in Los Angeles, which seems to have reached a satisfactory solution of the difficulties encountered, is now building machines for the manufacture of briquets of the wire-bound type, and a company in Vancouver is perfecting machines for making the rope-core type. As far as can be ascertained, both of these types give promise of satisfactory service under conditions of continuous operation. Another Vancouver company is manufacturing machines for the production of briquets composed of sawdust, coal dust and binder in about the following proportions: sawdust, 65 per cent., coal dust 25 per cent., binder (coal-tar pitch, petroleum refuse or sulphite waste liquor) 10 per cent. These briquets are hard and firm and resemble coal briquets in general appearance.

Fuel Value and Burning Qualities of Briquets

There seems to be a wide range of opinions concerning the fuel value and burning qualities of sawdust briquets, some ardent enthusiasts claiming all the virtues for them, and other, cynical pessimists declaring them quite unfit for many purposes. Certain German-made briquets are reported as unsuited for use in the tight porcelain stoves so common in that country, on account of the rapid combustion. Rapidity of combustion is also claimed to be a distinct disadvantage in places where it is desired to bank a fire over night.

It seems reasonable to suppose that the more loosely formed briquets will burn more rapidly than those formed under greater pressure or with firmer binding material; and it is believed that it may be possible to regulate the speed of combustion to a certain extent by varying the conditions under which the briquets are made. It is

pointed out by one of the manufacturers of briquetting machinery that briquettes made by his machines can be used for kindling wood by breaking the the binder. This bears out the deduction just drawn, since kindling must make a quick, hot fire to be satisfactory.

The fact remains, however, that, notwithstanding the failure of a number of German and French wood briquetting plants, there are certain conditions under which the industry flourishes, and it should not be very difficult to find out, in a general way, what those conditions are.

Before analyzing outside conditions which may have a bearing upon the success or failure of a briquetting plant it will be well to look at the briquet itself for a moment, and study its fuel value.

It seems rather peculiar that it has been found necessary heretofore to lay especial emphasis on the fuel value of briquets. It is quite logical to suppose that since, except for the binder, the briquet is merely wood, one pound of briquet should have as many heat units stored up in it as one pound of the same species of wood has, moisture conditions being equal. As a matter of fact, the meager data at hand uphold this view perfectly. Another peculiar thing about wood, which is borne out by tests made by the Forest Products Laboratory, is that, neglecting the heat value of the resins which appear abundantly in various species, a pound of absolutely dry wood has a very nearly constant fuel value (heat units) irrespective of the species of the wood.

We are led to believe, therefore, that in general a pound of wood briquet, irrespective of species, will have a nearly constant fuel value. The fuel value of dry wood is about, in round figures, 6,000 or 7,000 British thermal units per pound, and we would expect a pound of dry briquet to have about the same; probably a little higher, if anything, on account of the heat value of the organic binder (if one is used), which may have a greater unit heat value than the wood, thus raising the average slightly. If the resins in the wood are used as binders the same result may be expected on account of the higher heat value of the resins.

In comparing briquets with cordwood or stove wood it must be remembered that the briquet it usually much the dryer, and that, therefore, it will generate more heat per pound of material than the wood.

Necessary Conditions for Successful Sale

Having an insight into some of the properties of the briquet itself, we can understand more rapidly why certain conditions are needed for its successful sale.

In the first place, the fuel value per pound is much less for wood than for coal, so that to obtain the same amount of heat much more wood (dry) than coal must be used. If the wood is green instead of dry, still more must be used, because all the water in the wood is useless from a heating standpoint, and some of the heat of the wood is used up in converting this water to steam during combustion.

This means that if one is buying primarily on a heat unit basis he can afford to pay much more for coal than for wood or wood briquets, usually from one and a half to two times as much for coal as for wood when both are dry. If the wood is green, it is quite possible that the coal will have three or four times the effective heating value of the wood.

If the kindling properties of the briquet are of value, as in domestic use, the price obtainable will be proportionately higher.

In the second place, the cost of manufacturing briquets is not inconsiderable, conservative estimates placing the figure at not less than $3 a ton.

In the third place, the bulk of the fuel prevents its economical shipment over long hauls. This applies to the finished briquet and to the raw sawdust alike.

It is believed that the ultimate consumer will have to pay at least $6 a ton for the briquets to make the success of their manufacture assured, and on that basis it can be figured out with ease, under normal conditions, what the minimum price of coal must be to allow competition. Assume, for convenience, that the coal under consideration is bituminous, or one and one-half times the heat value of the briquet. Then, that coal must sell for at least $9 a ton before the briquet at $6 can offer the same heat value for the same price.

The main market for briquets will probably be for domestic use, so the cleanliness and easy kindling qualities of the briquet will be a fine asset, and it might be able to compete with the coal at only $8.50 a ton, the housewife being willing to pay a little more for the same heat value on account of other desirable properties.

In competing with cordwood the briquet has certain advantages, such as less labor in preparing for the fire, less moisture, hence more wood per pound, and less need for kindling wood. The almost total absence of ash and the absolute absence of slinker are great advantages in favor of briquet or wood over coal, and the lack of smoke is also pointed out as an advantage.

In conclusion, it may be stated that the best chances for the success of the wood or sawdust briquet are in those regions where sawdust is abundant and coal is expensive. The region fulfilling those conditions best in this country is the Pacific coast region; and it is a significant fact that the companies now establishing the industry in America are all, as far as the author knows, on the Pacific coast.

The Prime Factor in High Speed Planer Work

IF the "man with the wrench"—should be asked to point his greasy finger to the prime factor in modern high speed planer work, he would, in all probability point to the little automatic grinder as it smoothly glides back and forth across the machine removing the accumulated heel, and other things that have no business there—doing its work quickly and accurately, writes M. C. Cantrell in Berlin Quality. Changing knives has, from the day of the planer's birth, been a piece of work always dreaded, and too often, avoided by the planerman and his helper. It makes little difference how much time we have to "burn," that particular work is nothing short of drudgery to us. But when things are humming and everything keyed to a high pitch, and a set of knives must be changed, it gets on ones nerves, and it matters little how long they have been on. The point of exasperation comes, however, when a set of four or six knives, as the case may be, has been put on, jointed, and run an hour or maybe two or three hours, and a nick develops that cannot be taken out with the whetstone—and in hard knives it does not take much of a nick either.

Now when there is not a grinder at hand with which to remove this nick without removing the knife, it means a change all round. At this time, noise is charitable. It drowns from human ears, the things we say, and may the good Lord forgive us for the things we often think. Really, it tries ones soul. Round and round that head he must go, loosening caps or gibs, placing and gaugeing fresh knives then round after round again, tightening, tightening, next jointing, and guageing the stock for thickness. With the grinder, it is put into commission and in a very few minutes, the knife is made "good as new." A light jointing follows, and the machine is again at work in less time than the set can be removed.

This is but a single instance of the value of the automatic grinder. When putting in a fresh set of knives, give them the maximum projection. As often as "heel" accumulates to about one thirty-second of an inch, remove it by grinding, which is equivalent to a fresh set of knives. Repeat the operation until the knives are worn to the minimum before changing. This will probably be equal to re-knifing ten or more times. The time lost in grinding without removing the cutters from the head will hardly require more than twenty per cent. of the time necessary to change cutters. Moreover, it can always be arranged when changing times do come, to make it after working hours, or if not convenient to do it in that way, to take advantage of a "slack" hour with that particular machine, and when other work is not crowding our time.

I mentioned that changing knives was too often put off too long. There is a greater reason for it than a mere dislike for the work. It is because of a loss of time. In the modern planing mill everything goes at a hair-raising gait, and many times the quality of the work is sacrificed for the saving of time. Could the knives be sharpened in a few minutes, they would get it, but the loss of an hour is too much, and the job is postponed to the limit. The heel gets heavy, the grain is raised and torn, and many pieces must be trimmed out that would have passed O. K. under sharp cutters. Time is money, and a high grade product is more money. And when a high grade machine is purchased, one capable of producing maximum results in both quantity and quality, why hinder it in its work by leaving off an attachment costing but a few dollars?

Aside from the question of time, the grinding by the automatic is, in itself more desirable than by the large grinders used when the cutters are off of the machine. The small wheel used, more heavily concaves the back of the knife than the larger wheel and the more concave, the less rapidly the heel accumulates, allowing more jointing down without grinding.

Another trouble is that in placing the knives on the head, they are very apt to be uneven to the extent that one or more of them will be jointed more heavily than the rest—particularly at one end. And when one knife becomes heavily jointed, it spoils the work of the entire set. With the grinder, this is entirely overcome, as the knives may be "touched" up in a few minutes after jointing, and from that time on to the change, are kept perfectly uniform.

In short, this grinder is a tool that cannot be profitably dispensed with and at the best interests of a concern are not taken into account when machines are installed on which it cannot be used.

A despatch from Fredericton, N. B., states that the U. S. demand for New Brunswick lumber has improved during the past few weeks on account of wide-spread industrial activity following war orders from Europe. Reports from Great Britain are also to the effect that lumber market conditions continue to improve.

St. John and Miramichi Operations

St. John, N. B., March 4th:—Reports received from a number of prominent N. B. operators indicate that the lumber cut in New Brunswick during the present winter will be much larger than was outlined in earlier announcements. It is expected that the output on the New Brunswick Railway Company's lines will be about 65,000,000 feet, which is about the same quantity as that of last year. Practically all the companies on the Miramichi, with the exception of the Miramichi Lumber Company are taking out more than they originally intended. The Miramichi Lumber Company and the Dalhousie Lumber Company are only taking out about one half the quantity they took out last year. Operating conditions along the north shore have been good, and at present market conditions are favorable.

Fraser Ltd., Fredericton, N. B., are taking out about their usual quantity, for their various mills and will have sufficient stocks to keep all their plants going steadily throughout the season. In the neighborhood of Fredericton, the cut on Crown lands will be quite as large as it was last year. The same is the case in connection with operations generally along the St. John, in York, Carleton, and the lower end of Victoria counties.

On the Upper St. John and Allegash waters, the operating conditions have been favorable. There has been plenty of snow all winter and the weather has been cold and settled. The total cut in the Upper St. John and Allegash districts is expected to be about 53,000,000 feet, one million of which will be cedar. Much of this will be manufactured at Van Buren, Me., by the St. John Lumber Company, whose cut is about 32,000,000 feet. Of this 32,000,000 feet, about 19,500,000 feet will go down the St. John to Stetson Cutler Company at St. John.

The individual outputs of various operators on the Upper St. John and Allegash, according to the latest information received are as follows:—

On the Upper St. John river waters:

John A. Morrison of Fredericton, N. B., 9,000,000 for the St. John Lumber Co., Van Buren.

Flavien Chouinard at St. Pamphile, P. Q., 6,000,000 for the St. John Lumber Co., at Van Buren.

Arthur L. Noble of Fredericton, 5,000,000 for Stetson, Cutler & Co., St. John, N. B.

Albert M. Currier of Seven Islands, 4,000,000 for Stetson, Cutler & Co., of St. John.

Naviarre Pelletier of St. Francis, 500,000 for Stetson, Cutler & Co., of St. John.

On the Upper Allagash Waters:

Robert J. Potts of Hartland, N. B., 7,000,000 for St. John Lumber Co., at Van Buren.

Joseph T. Michaud of Houlton, 8,000,000 for St. John Lumber Co., at Van Buren.

Charles E. Jones of St. Francis, 2,000,000 feet for St. John Lumber Co., at Van Buren.

W. H. Canliffe's Sons of Fort Kent, 10,000,000 for Stetson, Cutler & Co., of St. John.

Aside from the figures already given Charles E. Jones will cut between 500,000 and 600,000 feet of cedar; J. W. Wheelock, 300,000 feet, and W. R. Wheelock 300,000 feet, all of which is for manufacture in the mills at St. Francis. These are all St. Francis men.

In the southern part of the province of New Brunswick the cut is about 60 or 65 per cent. of what it was a year ago. The curtailment in most cases has been voluntary, not the result of poor weather conditions. The chief reason for the reduction is the excessive cost of transportation by water to Great Britain and Europe. An early spring is expected and it is anticipated that the drives will be in motion earlier than usual.

Coast Lumber Association Elects Officers

The annual meeting of the B. C. Lumber & Shingle Manufacturers, Limited, was held recently at the new offices of the Association in the Metropolitan Building, Vancouver. The following officers and committees were chosen for 1916:

Honorary President—Mr. John Hendry.

President—Mr. J. W. Hackett.

Vice-Presidents—Mr. E. C. Knight (Vancouver, Mr. J. O. Cameron (Victoria).

Directors—Messrs. J. D. McCormick, J. B. Black, J. Hanbury, E. J. Palmer, L. A. Lewis.

Branch Chairmen—(Lumber): J. D. McCormick, chairman; G. S. Raphael, vice-chairman. (Shingles): J. Black, chairman; Robt. McNair, vice-chairman.

Parliamentary Committee—E. J. Palmer (chairman), E. C. Knight (vice-chairman), Messrs. L. A. Lewis, J. D. McCormick, G. S. Raphael, J. W. Hackett, J. O. Cameron.

R. R. Rules—H. J. Mackin (chairman), E. S. Sanders, J. Black, G. S. Raphael, A. R. Macfarlane, A. Flavelle.

Markets (Lumber Branch)—E. S. Sanders, chairman, with committee of the whole.

Grading Rules (Lumber Branch)—Geo. B. Cross, chairman; Mesrs. R. J. Thurston, E. S. Sanders, A. J. Hendry, H. K. Agnew, H. J. Mackin.

Markets Extension—L. N. Thompson, chairman; Messrs. J. G. Robson, H. J. Mackin, J. Hanbury, G. S. Raphael, A. Flavelle, D. McLeod.

Scaling and Grading (on lumber logs)—A. J. Hendry, chairman; Messrs. D. McLeod, J. Coburn, A. Flavelle, G. S. Raphael.

Grievance—P. D. Roe, chairman; Messrs. E. S. Sanders, H. J. Mackin, A. J. Hendry.

Blue Book—H. K. Agnew, chairman; Messrs. L. N. Thompson, Geo. B. Cross, H. J. Mackin, A. N. Wood.

Export Trade—E. J. Palmer, chairman; Messrs. H. J. Mackin, J. Hanbury, E. C. Knight, J. O. Cameron, A. J. Hendry, G. S. Raphael.

Export Sales—E. J. Palmer, chairman; Messrs. H. J. Mackin, E. C. Knight, L. A. Lewis, E. H. Bucklin, G. S. Raphael, D. McLeod, J. O. Cameron, G. S. Elliott.

Information Bureau—E. J. Palmer, chairman; Messrs. J. D. McCormick and E. S. Sanders.

Waste in Lumber Business

Waste in the logging industry in the United States amounts to fifteen to twenty per cent. of the timber cut, or about a billion and a half cubic feet of wood annually. Sawmill waste also amounts to several billion cubic feet of wood, although not all of it is absolute waste. A bulletin on the subject of lumber by-products just issued by the Bureau of Foreign and Domestic Commerce, makes the claim that only 320 feet of lumber is used for each 1,000 feet that stood in the forest.

It was the prodigious waste of American forest resources that led the Bureau of Foreign and Domestic Commerce to plan a thorough study of the methods of utilizing the waste products of the lumber industry in the United States and in those European countries that made the most distinct progress in this line. In the older and more thickly settled countries of the old world necessity led to a careful utilization of the forests many years before the subject was seriously discussed in this country. And in these older countries many methods have been worked out that should be of value in this country now that the old-time wasteful methods have been brought into disrepute. The plan was to have the American industry profit as much as possible by the hard-earned experience of the old countries.

Unfortunately the war upset the plan completely, and there is no immediate prospect of making the proposed investigation. But as the bureau had already engaged H. K. Benson, it was decided to go ahead and make a study of the industry in the United States. The bulletin just issued is the result of this study. It gives a definite idea of how far the manufacture of lumber by-products has been developed in this country, how far it may reasonably be expected to develop in the future, and just what some of the problems are that confront the industry.

There is a complete review of the wood-distillation industries, the manufacture of tannin extract, the manufacture of the various kinds of wood pulp used in the paper industry, the production of ethyl alcohol from sawdust, the manufacture of producer gas, and a number of other minor products. The extent to which these industries are carried on is outlined, and in cases where an industry is not prospering a discussion of the causes for such a condition is given. Import and export statistics are included when available.

The annual production of wood pulp in the United States is valued at over $80.000 000. Sulphite-pulp makers are considerably interested in the possible utilization of the sulphite waste liquor for the recovery of sulphur or other profitable utilization. This would result in a lowering of the cost of sulphite pulp. The manufacture of kraft pulp is also becoming well established, and is bringing about the utilization of cheaper wood.

The utilization of wood for the minor processes described in this report is not extensive. The manufacture of alcohol from sawdust has hardly passed the experimental stage, although technical men are optimistic as to the ultimate success of the process. One of the most interesting possibilities lies in the use of hydrolyzed sawdust as a carbohydrate cattle food. The use of wood for producer gas deserves more extended introduction in industrial plants. The manufacture of plastics from wood is still enveloped in secrecy, and, like the manufacture of wood flour, has apparently been developed to a much greater extent in European countries.

The new bulletin is entitled "By-Products of the Lumber Industry," Special Agents Series No. 110.

Arkansas Soft Pine Interests Appoint a Special Salesman at Chicago

In line with the trade extension idea as applied to lumber and with a view to developinpg new uses and markets for Arkansas Soft Pine, a group of Arkansas manufacturers has recently completed arrangements which provide for a special salesman, located at Chicago, representing an annual production of 550,000,000 feet, or approximately one hundred cars per day. From this office will be handled all inquiries of the unusual sort, as well as those originating from sources whose requirements call for ready shipments in large quantities. Special attention will also be given to searching into new fields where Arkansas Soft Pine is entirely adaptable but where it may have heretofore been unused. The concerns participating in this arrangement are the Arkansas Land & Lumber Company, Malvern, Ark.; Arkansas Lumber Company, Warren, Ark., Cotton Belt Lumber Company, Bearden, Ark.; Crossett Lumber Company, Crossett, Ark.; Eagle Lumber Co., Eagle Mills, Ark.; Edgar Lumber Company, Wesson, Ark.; Freeman-Smith Lumber Co., Millville, Ark.; Fordyce Lumber Co., Fordyce, Ark.; Gates Lumber Co., Wilmar, Ark.; Southern Lumber Company, Warren, Ark.; Stout Lumber Co., Thornton, Ark.; Valley Lumber Co., Reader, Ark.; Wisconsin & Arkansas Lumber Co., Malvern, Ark.

Joe H. Smith, Chicago, Ill.

A careful canvass of available men to fill this position resulted in the appointment of Joe H. Smith of Bloomington, Ill., for the past sixteen years, representative in Illinois and adjacent states for the Crossett Lumber Co., of Crossett, Ark. Mr. Smith has established headquarters at Room 630 Lumbermen's Exchange Building, Chicago, and is now actively engaged with his new duties.

That these manufacturers made a wise choice in Mr. Smith is evidenced by his successful career as a lumber salesman. Moreover, he is a veteran in the field and knows every detail of the lumber business from the felling of the tree to the installation of the finished product.

In 1880, after completing his education, Joe H. Smith joined his father in the retail lumber business which the latter had established at Mackinaw, and soon became a full partner. He had 12 years experience there and then travelled for several years, selling Northern White Pine and Yellow Pine. Sixteen years ago he became representative for the Crossett interests exclusively, with headquarters at Bloomington, where he has since remained.

Twelve years ago, Mr. Smith took his two sons, Clarence E., and Elmo S., into partnership under the firm name of Joe H. Smith and Sons. Some time after this, the sons transferred their headquarters to Peoria, Ill., where they are now, among the substantial fixtures of the lumber fraternity, under the business title of Smith Brothers. Mr. Smith's new arrangement will have no effect upon the business of Smith Brothers, nor will his work in Chicago in any way conflict with that of the individual representatives of the various concerns participating in the plan.

The Supreme Court of Appeal, at Fredericton, N. B., recently gave judgment in a case of much importance to New Brunswick lumbermen employed by lumber operators in the State of Maine. The case was that of Roy vs the St. John Lumber Company, a claim for $48 unpaid wages. Roy, was a stream driver and had obtained a judgment against the Brighton-Carleton Company for the amount of his claim, together with an order for leave to issue a writ for service out of the jurisdiction. The company appealed against this order and the Supreme Court has dismissed the appeal with costs.

Mr. H. E. Beasley, general superintendent of the Esquimalt and Nanaimo Railway, Vancouver Island, B. C., returned recently from an inspection trip over the company's lines. He reports that there is every indication of an exceptionally busy season this year. The demand far cars is already very heavy, especially for lumber. The company is already handling 30 to 36 cars a day for Cowichan Lake and Chemainus. Mr. Beasley reports great activity among the lumber mills on the Island.

Saws Make Their Debut in Vaudeville

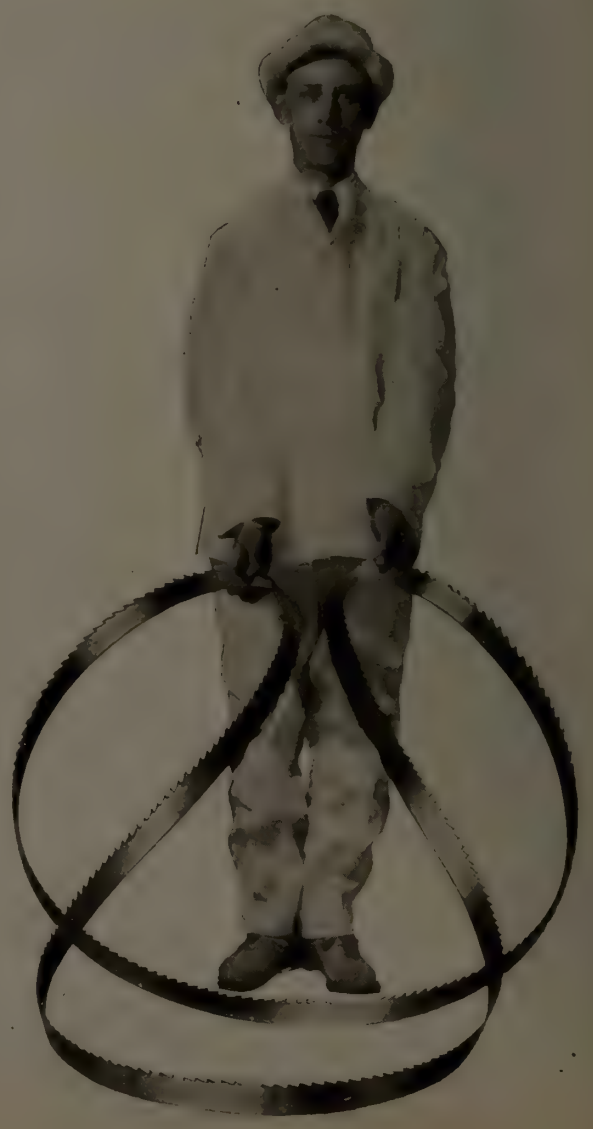
At a recent theatre party given by the Atkins Pioneers at the main Atkins Factory in Indianapolis, Ind., a new and novel act was presented by two young men from the factory. The first performance consisted of the very clever manipulation of a large shingle saw by Mr. Albert Copsey of the circular saw dept.

Mr. Copsey's performance consisted of rolling the circular saw and putting it through all kinds of contortions, sending it about the stage in large circles and then forming a figure eight, double eight, and spinning the saw like a top. His performance concluded with a most remarkable manipulation of the saw, wherein it was made to revolve on its circumference, gradually coming nearer and nearer to the floor, and then by manipulating the saw first with his foot and then his hand, the saw was made to stand upright again without moving from one spot.

Mr. Phillip Halskamp manipulated band saws in a manner to bring forth round and round of applause. He handled different sizes of saws, placing them in all conceivable shapes, forming single, double and triple coils, rolling the saws in coils without touching them with his hands and finally throwing the saws over his head with a twist which threw them into a coil, dropping down over his body on to the floor.

The act was of such a startling nature that we understand both of these young men have had very flattering offers from managers of vaudeville circuits.

Mr. John Ostrom, a prominent citizen of Pembroke, Ont., well known to Ottawa Valley lumbermen, was instantly killed on March 10th by a C. P. R. train at a crossing. Mr. Ostrom was driving a team of horses at the time and both he and his horses were killed. The late Mr. Ostrom was 65 years of age and had been engaged in the lumbering business in partnership with the late Robert Booth.



Lumber Case Dismissed

An action brought by the New Ladysmith Lumber Company against the Esquimalt ond Nanaimo Railway and the Canadian Pacific Railway for damages for the alleged non-delivery of a car of lumber shipped over their lines, consigned to Edmonton, has been dismissed by Mr. Justice Clement, his lordship expressing the opinion that the onus of proof rested with the plaintiffs and that they had failed to make out a case against the defendants. The plaintiffs will probably appeal against his lordship's decision.

Saskatchewan Companies Doing Well

Reports from the leading lumber manufacturing companies in Saskatchewan refer optimistically to the immediate future, which, compared with last spring, shows a decided promise. The Prince Albert Lumber company during the winter have employed altogether 15,000 hands and between 600 and 700 teams of horses. Apart from the payroll, the provisioning of this small army creates an industry in itself. Enquiries show that the logging camps which are located in the Shoal Creek and Stump Lake districts, are likely to break up at any time now, in any case by the beginning of next month, the company having already secured a full cut of logs. The logging camps report bad weather early in the new year, but say later favorable conditions facilitated the work. With the breaking up of the camps, all the old and regularly employed hands will be turned to millwork, the remainder returning to their homesteads. Most of the teams also go back to the harrow, the binder and the plow. The plant at Prince Albert will run night and day throughout the coming summer.

Mr. Angus Carss, of the Carss Mackinaw Clothing Co., Limited, Orillia, Ont., leaves on March 18th for his annual trip to the Pacific Coast. Mr. Carss has been calling upon the lumbermen throughout the country for many years and is well known to the trade. He carries a full line of samples of all his mackinaw clothing and lumbermen's supplies.

That the Western States are now on edge of a wave of prosperity that has swept the East as a result of the enormous demand for war munitions and that this prosperity will be reflected in a heavy demand for lumber from Washington mills are some of the assurances given by J. H. Bloedel, president of the West Coast Lumbermen's Association and of the Bloedel Donovan Lumber Mills, upon his arrival from an extended trip East.

The Croaker

Once on the aidge of a pleasant pool,
Under the bank where 'twas dark and cool,
Where bushes over the water hung,
And rushes nodded, and grasses swung,
Jest where the crick flowed outer the bog,
There lived a grumpy and mean ole frog,
Who'd set all day in the mud and soak
And jest do nothin' but croak and croak,
Till a blackbird hollered, "I say, yer know,
What is the matter down there below?
Are you in trouble, er pain, er what?"
The frog sez, "Mine is a orful lot;
Nothin' but mud and dirt and slime
For me ter look at jest all the time.
It's a dirty world!" so the old fool spoke,
"Croakity-croakity-croakity-croak!"

"But yer lookin' **down!**" the blackbird said;
"Look at the blossoms overhead,
Look at the lovely summer skies,
Look at the bees and butterflies;
Look **up,** old feller. Why, bless yer soul,
Yer lookin' down in a muskrat hole!"
But still with a gurglin' sob and choke
The blame ole critter would only croak.
And a wise old turtle, who boarded near,
Sez to the blackbird, "Friend, see here:
Don't shed no tears over him, fer he
Is low-down, jest 'cause he likes ter be;
He's one er them kind er chumps that's glad
Ter be so mis-rable-like and sad;
I'll tell yer somethin' that ain't no joke,
Don't waste yer sorrer on folks that croak."

—From "New Age."

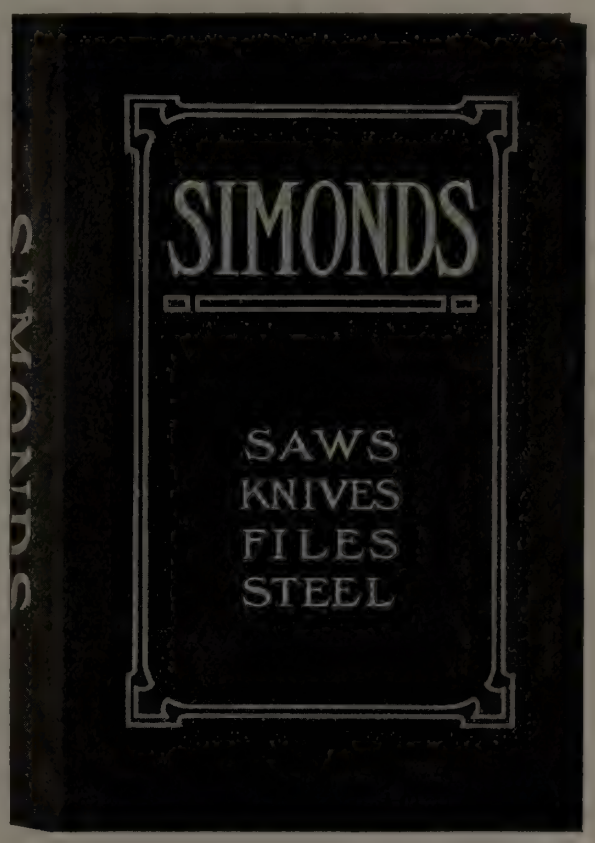
New Name for an Old Firm

The P. B. Yates Machine Company Ltd., will in future be the name of the well known firm of woodworking machinery manufacturers formerly known to lumbermen under the name of the Berlin Machine Works, Beloit, Wis., U. S. A., and Hamilton, Ont. In an announcement sent to the trade the company state that ever since the business was founded 40 years ago in the little Wisconsin town of Berlin, from which it took its name, considerable annoyance has been experienced through the adoption of this name by many other small concerns, established in cities of the same name in various States. They have therefore, concluded to change the name as above noted. This change is confined to name only. The officers, personnel, capital and policy remain as heretofore.

A Saw and Knife Book

When the 1916 issue of the Simonds Catalog was prepared the company made an effort to embody in it items of especial interest to saw and planing millmen. There are tables giving specifications, sizes and numbers of teeth, facts about speed of saws, and other technical points. Many illustrations appear in this book which have not appeared in previous issues of the Simonds catalog. Among the new goods illustrated and described is the new Inserted Tooth Cut-off Saw.

A special edition of this catalog has been prepared for filers.



sawyers, and superintendents of mills and they are welcome to a copy if they will write, mentioning this paper and addressing—Simonds Canada Saw Co. Limited, St. Remi Street & Acorn Avenue, Montreal, Que.

Urges B. C. Trade to Get Ready for Big Orders

Mr. Andrew Ness of the Ness Trading Company, Glasgow, Scotland, was in Vancouver recently, during a visit to B. C. to inspect the lumber situation. Mr. Ness looks forward to an enormous demand for B. C. forest products as soon as the war begins to approach its conclusion. During the days of reconstruction he expects to see an unprecedented demand in Europe for timber and lumber, and urges B. C. mill men to begin now to make ready for the opportunity.

A press despatch from Chicago recently stated that the Belgian Government is in the market for 5,000,000 feet of wood goods, 3,000,000 feet of which is to be in large hewn timbers. The despatch states that orders are to be placed on the market through the Belgian Consul at New Orleans, La.

Mr. Wm. Bryant, formerly superintendent for Schultz Bros. & Company, Brantford, Ont., has been engaged as superintendent of the plant of the Muskoka Wood Manufacturing Company, of Huntsville, Ont.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Wanted good sound Basswood logs, 12 in. and over in diameter. Quote best price F.O.B. cars. Apply Hay & Company, Limited, Woodstock, Ont. 3-6

Lumber Wanted

Soft Elm, Ash, Maple, Birch, Beech, Basswood. Dry or new cut. Cash when loaded. Box 373, Canada Lumberman, Toronto, Ont. 6-7

Cedar Wanted

Good cedar for boat building. Best prices paid for the right material. Write for particulars. The Peterborough Canoe Company, Limited, Peterborough, Ontario. 6-9

Hemlock or Spruce Timbers

We want to place an order for several cars of Hemlock or Spruce Timbers, 3 x 6 to 8 x 10 in., 10 ft. to 30 ft., for early shipment. Write the Elgie & Jarvis Lumber Company, Limited, 18 Toronto Street, Toronto. 6-6

Red Pine Wanted

Wanted to buy a stock of Red Pine. Apply Box 363, Canada Lumberman, Toronto, Ont. 6-8

Hemlock, Pine, Basswood

Wanted to buy one million feet Hemlock, also 1-inch Cull Pine and 1-inch Cull Basswood. Box 364, Canada Lumberman, Toronto, Ont. 6-8

Lumber Wanted

Wanted several cars maple, beech or birch squares 1, 1⅛, 1¼ in. x 42 to 60 in. in length. Write for particulars. J. Finlay & Sons Co., Norwood, Ont. 5-8

Grey Elm

Wanted 100,000 ft. of 1½ in. grey elm, No. 1 common and better, this lumber not to be edged, and can be loaded direct from the saw, but must be in 6 or 12 ft. lengths. Write for prices f.o.b. cars shipping point. Box 295, Canada Lumberman, Toronto, Ont. 3-6

Maple Squares

Wanted to buy 700,000 Maple squares, 1 in., 1¼ in., 1½ in., 1¾ in. and 2¼ in. Lengths 12 in. and up. A. K. Hansen & Co., St. Peter Street, Quebec City. 3-6

Basswood Wanted

Wanted 200,000 feet of 1-inch White winter cut Basswood to grade No. 1 Common and Better, to be plump 1-in. thick when dry. State price F. O. B. cars shipping point. Address, Box 308, Canada Lumberman, Toronto, Ont. 4-t.f.

Logs Wanted

Several cars Rock Elm logs. Quote price to St. Marys Wood Specialty Company, Limited, St. Marys, Ont. 4-7

Wanted to Buy

450,000 ft. 2 in., 2½ in., 3 in. and 4 in. log run Birch. Terms 75 per cent. cash on shipment, balance on arrival. Apply P. O. Box 643, Montreal, Que. 3-6

Wanted

All kinds and thicknesses of hardwood and softwood lumber. Give full description of same, together with price. Box 328, Canada Lumberman, Toronto, Ont. 4-t.f.

Soft Elm and Poles Wanted

Soft Elm, one or two cars, firsts and seconds, 3 in. and 3½ in. Quote lowest price. Also want poles 8, 16 and 24 feet, Tamarack or Hemlock. Large number wanted. Box 349, Canada Lumberman, Toronto, Ont. 5-6

Wanted

We are in the market for a large quantity of 2-in. Spruce Plank 4 in. and up wide, 8 feet and up long. Good merchantable stock. Kindly write us your lowest price. Box 334, Canada Lumberman, Toronto, Ont. 5-t.f.

Wanted

Several cars 16/4 Birch, No. 2 common and better grade. Must be dry and ready for immediate shipment. Write us your lowest price and full particulars. Box 333, Canada Lumberman, Toronto, Ont. 5-t.f.

Wanted

Wanted for shipment whenever in shipping condition:
2,000,000 ft. 3 in. No. 1 Com. & Bet. Soft Elm.
1,000,000 ft. 2½ in. No. 1 Com. & Bet. Soft Elm.
1,000,000 ft. 2 in. No. 1 Com. & Bet. Hard Maple.
500,000 ft. 2½ in. No. 1 Com. & Bet. Hard Maple.
Box 332, Canada Lumberman, Toronto, Ont. 5-8

WANTED
4-ft. Plastering Lath

We are ready to contract for 75,000,000 No. 2 and 3 Lath, cut 1½ x ⅜—4 ft., bundled 50 pcs. per pack. Can use mixed Pine and Spruce or all Spruce. Advise what you have now, quoting prices f.o.b. Chicago. Will consider proposition on your 1916 cut if you have no dry lath on hand.

Cannon River Lumber Company,
5-6 Webster Bldg., Chicago, Ill.

Spruce Pulpwood Wanted

Spruce Pulpwood wanted of good size, merchantable quality, four-foot peeled preferred, on cars shipping point. Box 323 Canada Lumberman, Toronto, Ont. 4-7

For Sale-Lumber

Hemlock Ties

FOR SALE—Considerable quantity of hemlock ties suitable for Electric Railways, Sidings, etc., ready for immediate shipment. Monteith Bros., Rosseau, Ont. 6-10

For Sale

One car nice 8/4 Rock Elm running high in grades. C. B. Janes & Co., Limited, Orillia, Ont. 5-t.f.

For Sale

White Pine and Hardwood, estimated 300,000 feet, will cut to order. G. A. Patrick & Son, Delaware Saw Mills R. R. 2, Lambeth, Ont. 1-6

Poplar For Sale

For sale two cars 1-in. Poplar cut March, 1915. Enquire by letter to Knight Bros. & McKinnon, Limited, Box 569 Cobalt, Ont. 4-tf.

Lumber For Sale

200 Pieces 1 x 15 and up 22 ft. Cypress.
375 Pieces 1 x 15 and up 24 ft. Cypress.
Clear for boat building, in stock at Montreal.

GEO. C. GOODFELLOW,
Montreal, Que.

Wanted-Machinery

Wanted

Small portable mill suitable for sawing ties, must be cheap for cash and in good order, either steam or gasoline. Send full description. Herbert Grier, 137 McGill Street, Montreal, Que. 5-6

For Sale-Machinery

Hoist For Sale

For sale cheap, steam hoist for loading logs. Apply to Cain Coal Company, North Cobalt, Ont. 6-7

Sawmill For Sale

Semi-Portable Sawmill, 45 H.P. engine, 50 H.P. boiler, mill complete with trimmers. Two saw edger. Endless log chain; combination lath machine and bolter. Swing cut-off saw. A snap for a good outfit, has only run four months. Box 371, Canada Lumberman, Toronto, Ont. 6-6

Planer and Matcher

Berlin No. 94 Planer and Matcher in good condition, with furring attachment. Capacity 100 feet per minute. Price, $750 f.o.b. Drummondville. Reason for selling, replacing same with faster machine. Apply Campbell, MacLaurin Lumber Company, Limited. Drummondville, Que. 6-7

Engine For Sale

Corliss Engine, 150 H.P., 18 cylinder, 24 inch leather belt, with pump, first class condition, no fault, changing to Electric. Inspect at Guelph Lumber Co., Guelph, Ont. 5-8

Machinery For Sale

A small "Ad" under this heading, telling of what machinery you have for sale, will immediately put you in touch with buyers. Send us a list of machinery items and we will quote you on a small "Ad." Send the list now, before you forget about it. 1-t.f.

Wood-Working Machinery

1—36" Crescent band saw, A1 condition	$75.00
1—24" Cowan double surfacer, A 1 condition	375.00
1—8" Crescent jointer	75.00
1—Variety saw table, iron	85.00
1—Wood frame, 8 ft. saw table	60.00
1—Combination drill and mortiser, McGregor-Gourlay, 4" stroke, table ¾ x 5½, raise and lower 12", side movement 10", knife 1" wide	50.00

Pollard Manufacturing Company, Ltd.,
5-8 Niagara Falls, Ont.

Wanted-Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents.

Wanted position as band saw filer, long experience and good references. Box 300, Canada Lumberman, Toronto, Ont. 3-7

BAND SAWYER wants position, left hand mill. Good references. Box 335, Canada Lumberman, Toronto, Ont. 5-8

Open for year round position April 1st to take full charge for company with large stock of logs interests of the sawing, grading, estimating and inspection of all shipments. Married man with twenty years of experience as lumber inspector and manager. Box 305, Canada Lumberman, Toronto, Ont. 3-6

BAND SAWYER wants position. Three years' experience on double and two on single cut. First class recommendations. Box 342, Canada Lumberman, Toronto, Ont. 5-7

BOOKKEEPER AND STENOGRAPHER, thoroughly conversant with all routine office work, desires position; satisfaction absolutely guaranteed. Box 340, Canada Lumberman, Toronto, Ont. 5-8

EXPERIENCED BAND-SAW FILER wants position. Can supply first class references. Box 368, Canada Lumberman, Toronto, Ont. 6-6

LATH MILL MAN wants position to run a lath mill by the day or per thousand. Will go anywhere; ten years' experience. Reference. Box 369, Canada Lumberman, Toronto, Ont. 6-8

CIRCULAR SAWYER and capable filer wants position. Married; strictly temperate; with fifteen years' experience. Long season or steady position desirable. Box 370, Canada Lumberman, Toronto, Ont. 6-6

EXPERIENCED LUMBERMAN wants position in lumber factory. Can take full charge of same and understand all the different machines, also filing. First-class references. Box 358, Canada Lumberman, Toronto, Ont. 6-8

DOUBLE BAND SAW FILER wants position, first-class references.

BAND MILL FOREMAN wants position, first-class millwright, and can handle men to good advantage. Box 359, Canada Lumberman, Toronto, Ont. 6-11

BAND, RESAW OR ROTARY SAWYER wants position. Six years' experience; sober and good references. Box 353, Canada Lumberman, Toronto, Ont. 6-9

MANAGER OR SUPERINTENDENT — If your concern needs a man of authoritative knowledge in the woods, pulpwood and sawmill business of Eastern Canada, who is accustomed to large responsibility, is of a constructive and organizing type and can push things, desiring extent of remuneration on the basis of what he can actually accomplish, please communicate for details or preferably granting personal interview, with Box 367, Canada Lumberman, Toronto, Ont. 6-6

Wanted-Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents.

WANTED—SALES MANAGER in large lumber business, sales principally to United States markets. Must be thoroughly acquainted with production and classification of Spruce lumber, rough and dressed. Good salary for suitable man. Apply Box 362, Canada Lumberman, Toronto, Ont. 6-7

GREEN LUMBER CULLER wanted for large Ottawa Valley mill. Must be experienced. Give references, experience and wages expected. Box 356, Canada Lumberman, Toronto, Ont. 6-7

TIMBER CRUISER and traveller wanted. Apply Box 365, Canada Lumberman, Toronto, Ont. 6-8

SUPERINTENDENT WANTED for woodenware and wood novelty plant. Man familiar with manufacturing all kinds of wooden household articles. State experience, items you have been handling, where now employed, salary expected, etc. Give full particulars. Box 357, Canada Lumberman, Toronto, Ont. 6-7

SALES MANAGER wanted by a good reliable Western Ontario firm who manufacture a full line of building products. Must be a good pushing man, possessing the requisite knowledge of this kind of business to enable him to handle advantageously the advertising and selling of such products other than those sold to the local trade. Apply Box 361, Canada Lumberman, Toronto, Ont. 6-6

SUPERINTENDENT WANTED for old established and reliable Company in middle Western Ontario who manufacture and distribute a full line of builders' supplies in soft and hard woods, veneers, etc., and also manufacture boxes, shooks and other branches relating to the woodworking industry, for which we require a good, live practical man, one who understands men and machinery and can get results. No other need apply. References required. Box 372, Canada Lumberman, Toronto, Ont. 6-6

Business Opportunity

Make your opportunity knock at the door of every Lumberman in Canada by placing a small "Ad" about it in this column. Our rate is $2.10 per inch per issue. Now is a time when monied men are seeking good bargains. What have you to offer? 1-t.f.

Siding For Sale

Siding in Toronto, 272 feet on G. T. R. Siding now in. Property of Sterling Lumber Company. Splendid retail prospects. D. A. Atkinson, 32 Church Street, Toronto, Ont. 6-t.f

Tie Contractor Wanted

Wanted a responsible contractor who would undertake to get out a quantity of ties in Ontario. Apply Box 366, Canada Lumberman, Toronto, Ont. 6-8

Miscellaneous

30 Replies

are often received to "Wanted" and "For Sale" ads. on this page. Even 50 replies are not an uncommon return from the investment of the small amount a condensed ad. costs. And isn't that good business—to get right into close touch with so many people interested in what you have to buy or sell? For you can be sure their transactions with you will not end when they have closed the business your single ad. announced.

Washington shingle manufacturers are lending hearty support to the campaign launched by the shingle branch of the West Coast Lumber Manufacturers' Association to raise $60,000 to initiate what is planned to become a nation-wide advertising campaign in favor of Washington shingles. At a recent meeting of shingle manufacturers Secretary H. P. Wyckoff told his auditors that "unless the shinglemen of the coast combine at once and advertise red cedar shingles nationally, the shingle business here inevitably will go on the rocks. One of two things will happen. Either it will be killed by the patent roofing companies, who are now flooding the country with advertising, or it will be bought up by large capital and exploited in some such manner as we are now presenting to you."

Review of Current Trade Conditions

Ontario

The lumber trade in Ontario continues on a very quiet basis. This is quite a normal condition for the present time of year and simply means that the trade is at a between-seasons stage. The severe weather of the past fortnight has added to the natural quietness of the trade. Travellers who have been about the province extensively during the past month are inclined to believe that conditions will pick up as soon as the weather shows signs of becoming more settled and pleasant. There is already quite a fair consumption of stock by some manufacturing lines. Piano and medical instrument lines, for instance, are quite active, and are using up a good deal of lumber.

The shell box situation is still more or less of a puzzle. The Munitions Board have sent out tender forms in connection with several classes of boxes. Their requirements in Ontario, according to these forms, will be extensive. A great many firms are figuring upon the work, and it is expected that contracts will soon be given out. In fact, we already learn that some contracts have now been placed. In connection with these contracts it is likely that there will be a much better feeling among the trade than under the old way of doing business, even if the calling for tenders in a businesslike manner reduces the actual returns to the firms which receive the contracts.

The building situation throughout Ontario, while it has not yet shown any activity, is expected to do so pretty soon. Travellers find that Ontario farmers, like the farmers in the West, are well supplied with money, and that they are giving a good deal of thought to the necessity for putting up new buildings and repairing old ones. It is quite reasonable to believe that there will be a fair movement in this direction during the approaching spring, as the farmer has done remarkably well, and for a long time past has not been much of a factor in the building situation.

Reports from Ottawa indicate that a noticeable improvement has commenced in the lumber trade, especially in connection with the American market. There is a strong demand for spruce for export to New York. Reports from the woods indicate that operations have been carried on successfully in practically all cases, and that hauling operations are almost completed.

Eastern Canada

There is no change to report in connection with the lumber market at Montreal, nor is any expected until construction again becomes active. A fair amount of building in the way of houses and flats is looked for this year, but there are no important large construction schemes under consideration. Wholesalers are looking forward anxiously to the letting of new shell box contracts, hoping that they will soon be placed, and afford relief from the present dullness. The export situation continues very uncertain. Steamship companies are unable to give information regarding the amount of tonnage that will be available, as they do not know what the requirements of the Government will be. Some space has already been booked at 285s and 300s per standard. A couple of tramp schooners, it is said, have been chartered at 225s.

At Boston, the price of eastern spruce continues to advance. Retail yards are buying plentifully and manufacturers are not very keen about selling. Some mill men are quoting $28 base for spruce frames, Boston delivery, which is the highest price in years and probably the record price. Some sellers, however, have been taking $27, but these are now scarce. The production of spruce this winter is reported to have been from 25 to 50 per cent. below that of the winter previous. There is an active demand for random, and quotations are firm, the range being as follows:—2x3, $21.50 to $22; 2x4, $22.50 to $24; 2x5, 2x6 and 2x7, $21.50 to $22; 2x8, $25 to $26.50; 2x10, $27; 2x12, $28. The lowest price now asked for matched boards in stock lengths is $25 and some are asking $26. All lines of hardwood at Boston are firm and the demand is strong. Birch is especially active. Thick sizes of birch are high and very erratic. Firsts and seconds 1 in. birch are quoted at $56 to $59 for red, and $45 to $47 for sap birch. Stocks of dry hemlock in manufacturers' hands are much reduced. The demand seems active, especially for dry hemlock boards. Clipped boards 10, 12, 14 and 16 ft. are bringing $23. Shingles are rather quiet, but on account of the situation on the Pacific Coast, prices are fairly steady. The best white cedar extras are offering at $3.50 and fair makes at $3.40. The range for white cedar clears is from $3 to $3.10. Lath are steady and fairly active. For 1 5/8 in. manufacturers are asking $4.25, Boston rate, and for 1½ in. $4.

United States

The most important feature in connection with the general business situation in the United States today is the remarkable condition of the steel market. Consumers are almost in a panic for fear there will not be sufficient steel to go round, yet record breaking prices do not seem to worry them a bit. In addition to the enormaus demand for steel for munitions and war supplies the domestic consumption has reached great proportions. All this activity is producing a tremendous demand upon the car building companies. All car shops are crowded with orders. The immense amount of money that has been put in circulation generally has created an easier money market, producing a condition of prosperity that leads people to consider the building of homes and the erection of business buildings, also construction work of all kinds. This is the feature of the general situation that is of particular interest to the lumber trade, as it ensures a good demand for building material that will continue probably throughout the present year. An increased demand for building materials of all kinds is confidently expected this spring. The lumber industry is now enjoying a large immediate demand and the indications are for an improved demand for the future. It is seriously handicapped, however, by lack of transportation facilities, the freight situation constantly growing worse and the congestion at the large eastern ports continually becoming very pronounced. In short, the railroad companies are swamped with business and their facilities for taking care of it are absolutely inadequate.

The yellow pine business is on a better basis than it has been for several years. Although there was a slight fluctuation and reduction in prices during February, conditions have again improved and the tendency is now distinctly upward. Producers appear to have the situation well in hand and a stable market from this time forward is well assured, as the demand is constantly increasing and production is being kept well within bounds. Manufacturers on the Pacific Coast report improvement, and a better situation than there has been for some years. Lumber being shipped now is bringing the purchaser a considerable advance over the prices of 1915. Inland Empire mills are also enjoying a good demand. Throughout the western interior the situation is one of general prosperity. Northern hardwood maufacturers report a good demand for their products, and the same conditions pevail in connection with southern hardwoods. Hemlock manufacturers in the north and east are enjoying a good demand for practically all they can produce, at good prices. The situation is easily and definitely summed up in regard to all parts of the country in a statement that the only drawback to be found anywhere is the lack of transportation facilities. With this removed the lumber business is assured of a long season of prosperity.

Great Britain

The spot market at London continues very active and deliveries are large in spite of the fact that available stocks are light and arrivals limited. Values continue to advance so that importers are not attracted to the forward purchasing business. Practically all transactions at present are for immediate requirements. Conditions are now such that when navigation is opened shipments of all kinds of stock should be heavy. Deliveries at London docks for the week ending February 12th amounted to 3,851 standards as compared with 4,361 standards during the corresponding week of 1915. At Foy, Morgan & Company's recent auction sale 3 x 5 unsorted St. John spruce 5/20 sold at £23 5s per standard. A load of clear silver spruce from Portland, Ore., 2 x 8, 10/22 sold at £27 10s per standard. Montreal pine dry firsts, 1 x 4/6, 10/16 brought £31 per standard. Unsorted Montreal spruce 3 x 7/11, 10/14 sold at £25 15s. Oregon pine from Tacoma, Wash., 1½ x 8, 8/16, dry prime clear, brought £23 per standard.

At Liverpool, the timber trade is greatly concerned about the interpretation that will be placed upon the edict prohibiting the importation of furniture woods, hardwoods and veneers. Up to date, the latest information gives no explanation of what this edict will cover. The greater portion of the wood imported under these headings, however, is for Government requirements and it may reasonably be assumed that the exemption clause will still allow these goods being brought into England under license. The c. i. f. spruce market at present is practically dead. A few liner parcels have been arriving and have been disposed of quickly at figures surpassing all records. There is no business in progress for forward delivery on clear c. i. f.

terms, because of the lack of tonnage. Space from Quebec to Liverpool or Manchester has been booked at 260s per standard and 300s is talked of. The spot market has continued to advance and the demand is still strong, while arrivals are very small. The purchasers of today are the actual consumers in nearly all cases. Prices of all thicknesses of birch have advanced. First open water is still some distance off and it looks as though further increases may be expected. At Manchester, stocks of hardwoods are low and with the embargo upon their importation it looks as though higher prices are certain. In soft woods also, the high freight rates continue to advance prices. Spruce deals 3 in. x 11 in. are valued at £35 per standard, and scantlings at £26 10s. Quebec and other pine is advancing in value daily. Third quality deals are near £33 per standard for 11 in. widths.

A steady volume of business is reported from Glasgow, on a spot basis. Very little spruce is arriving at present and prices are advancing, with apparently no effect upon the demand, which continues brisk.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Uncertainty Still Governs Montreal Trade

Montreal, March 11th (Special to the Canada Lumberman):—Conditions in the lumber trade remain about the same as noted in the last report. Until construction makes a start, there is not likely to be any marked improvement in the demand. As far as can be gathered, there are no important schemes under consideration, although we may expect a fair amount of building in the way of houses and flats. For the moment trade is very quiet, wholesalers looking forward to the new shell box orders to give a certain amount of relief from the present stagnant position.

Most firms with shell box contracts are working at a comparatively slow rate; some are behind in their deliveries, not because they were not prepared to make deliveries, but in consequence of production being ahead of requirements. The prices for boxes have lately been reduced, and there are complaints that certain firms are apparently willing to manufacture at quotations which leave little or no profit or at an actual loss. This cutting, it is declared, must have its influence on the general volume of shell box business, making it difficult to secure a reasonable amount of profit.

The building permits last month totalled $65,915, as compared with $441.980 in February last year. For the year to date the value is $240 075, against $645.241 in the corresponding period of 1915.

There is much uncertainty as to the export situation. The steamship companies are in the dark as to the amount of tonnage likely to be available, owing to Government demands. There are, however, indications of the rates which are likely to prevail. A little space has already been booked at 285s. and 300s. per standard, and it is also reported that one firm has chartered two tramp steamers at 225s.

The sulphite pulp market continues its upward march. With a very strong demand, and with European supplies to the United States limited, the outlook is for a still further gain in values. Kraft pulp is scarce. Newsprint is in heavy request both for domestic and foreign account and is shipped out as fast as can be manufactured. Prices, too, are rising, in sympathy with the advance in sulphite.

Ottawa Trade Showing Improvement

Ottawa, March 9th; (Special to the Canada Lumberman):—There has been noticed quite a decided change for the better in the local lumber trade. Particularly is this so in the American market, but the Canadian trade has also improved somewhat during the last two weeks. Spruce is especially strong in the New York market and there is a good demand for 1½ inch by 48 inch lath at an advance in price. Most of the Ottawa manufacturers look forward to a year of good trade, especially with the United States.

Lumbermen expect that tonnage will again be very scarce for moving lumber to the British Isles. At the same time it is understood that some of the English buyers are looking this way to buy cuts for this season.

Some of the manufacturers' yards are fairly well loaded up, but owing to the improvement in trade, stocks are being cut down at a good rate now. With regard to woods operations, the work is coming along in good shape and most of the hauling will be caught up within the next ten days.

Mr. G. C. Seibert, formerly with Schultz Bros. & Company, Limited, Brantford, Ont., where he occupied the position of sales manager, has been appointed manager for Galbraith & Company, Limited, Owen Sound, Ont. Galbraith & Company, Limited, are arranging to go into the manufacture of wood specialties, such as toys, games and kitchenware, more particularly such articles as are now imported.

Canadian Trade in Great Britain

In its issue of February 19th, the Timber Trades Journal of London, England, under the heading of "Canadian Trade," publishes the following:—"The majority of the cuts of Quebec spruce have now been arranged for by shippers, the production being about the same as last year, and though we understand a small advance on last year's prices is being asked, it would appear now as if spruce was relatively the cheapest wood to be had in the British market. One of the Canadian shippers now on this side has expressed his amazement and disappointment that up to now the British Government purchasers of whitewood should have gone so largely to Swedish and Russian shippers. With regard to yellow pine deals little has yet been done in selling, as the inevitable freight difficulties are standing in the way of business. There is a fairly good demand in certain parts of the United Kingdom, but the prices being realised are in nearly all cases less than the goods could be imported at, at the present rates of freight. The market, however, is rising, and should continue to do so unless there is a drop in the freight market. Some of the railway inquiries are out for oak timber, for which there is an active demand. The Admiralty contract for timber, consisting of elm and waney pine, has again been placed with the firm of J. Burstall & Co. Canadian shippers are wondering as to the scope of the restrictions against the import of hardwoods into this country, but hope that these will not be extended to Colonial woods. As a matter of fact the bulk of the Canadian hardwoods is used by the railway companies and shipbuilders, whose requirements are essential for the welfare of the country, especially in times of war. The following Canadian shippers are now in England on their annual visits: Mr. Wm. Power, M. P., of W. & J. Sharples; Mr. J. F. Burstall, of John Burstall & Co.; Mr. R. M. Cox, of Robt. Cox & Co.; and Mr. Kerouet, of King Bros., Ltd. Mr. Beckett, of R. R. Dobell & Co., who generally pays us a visit at this time of the year, is in training at Quebec preparatory to going to the front, whilst another who usually comes over, Mr. Goodday, of H. R. Goodday & Co., is also undergoing a course of military training before coming to Europe."

Will Advertise Red Cedar Shingles

A meeting was recently held in Vancouver, B. C., attended by some of the leading manufacturers of red cedar shingles in the province and it was decided that the firms represented should join with the United States mills in a combined project to advertise red cedar shingles throughout North America, by the medium of magazines, newspapers, farm publications and lumber and trade journals. B. C. mills which have already joined this movement are as follows:—Vancouver Cedar Mills Ltd., Huntting-Merritt Lumber Co. Ltd., New Westminster Mill Co. Ltd., and the Thurston-Flavelle Co. Ltd. Including American mills, the membership covers 40 mills manufacturing 3 billion shingles annually. The movement includes not only advertising the red cedar shingle, but the stablizing of grades, efficient inspection arrangements and the furnishing of literature and illustrations to retailers to enable them to carry on their local advertising successfully. It is also proposed to provide a trade mark so as to make it possible to guarantee quality.

It is estimated that B. C. exports of lumber during 1915 amounted to about 100,000,000 feet, as compared with 37,000,000 feet during 1914, the increase being largely due to the requirements of the allied Governments for war purposes. Much of the exports have been handled by vessels furnished by the Governments. The scarcity of tonnage, however, has led to the shipment of considerable quantities by way of the C. P. R. which has made a rate of 60c per hundred lbs. on lumber from B. C. coast terminals to St. John, N. B., whence the material is shipped to United Kingdom ports by vessel. The latest reports tell of increasing activiey in the lumber trade of B. C., the demand both at home and abroad being on the increase. The box shook trade of the province has been stimulated along with other lines, and markets for B. C. shooks have been developed which were hitherto unknown. The outlook in this line is quite promising.

Utilizing Wood Waste in the Paper Industry

By E. B. Biggar

The devastation of large tracts of state-owned forests in France and Germany by the armies that are now wasting the face of the earth in Europe, and the stoppage of the regular channels of the lumber trade since the great war began will direct attention anew to the possibilities of saving the prodigious waste of wood that has been going on ever since the axe has been laid to the trees of this continent. Fortunes can be made out of the odds and ends of waste in the lumber industry of Canada and the United States. It is calculated that if the wood wasted in yellow pine lumbering were distilled by the steam process into turpentine the product would equal all the turpentine produced from gum. Tanning extracts are largely made from chestnut, and usually from cordwood, but in a recent year (1907) there was enough wasted in the chestnut lumber industry of the United States to produce all the tanning extract made that year from the cordwood specially cut for the purpose. These are two illustrations out of many that could be cited as to the enormous aggregate of wood waste that might be profitably used.

There is a large waste of raw material in pulp and paper manufacturing, and the great development of this industry in Canada will no doubt bring into existence allied industries such as are carried on in European countries. Up till now the attention of capitalists has been so concentrated on the main industry that scarcely any thought has been devoted to using the by-products of the business; but these by-product industries will come in time.

The Soda Pulp Problem

It has been suggested that much can be done in saving sawmill waste to use in the manufacture of soda pulp. This can be done, but the process is not without its difficulties. Unfortunately the question of the raw material is the least of these difficulties. It is a problem of chemicals, of transportation, of cheap power and of markets combined.

It may seem strange that while the manufacture of mechanically ground wood pulp, of sulphite pulp and of sulphate (Kraft) pulp has developed so wonderfully along with paper manufacturing in many of its special branches in Canada, there has been no increase in the soda pulp industry in recent years. Indeed, it is a fact that the present total output, since the destruction by fire of the plant near Newcastle, N. B., is less than it was fifteen years ago, there being now only two plants that are in active production, making less than twenty tons per day. The cost of a soda plant would be about $10,000 per ton per day output.

Soda pulp is produced by the action of caustic soda on the fibres of the wood, digesters for treating the wood being used, as in the making of sulphite pulp. Caustic soda is produced from carbonate of soda, and is known also under the trade name of soda ash or alkali. By the sulphite and sulphate processes, which need not be here described, wood pulp is made having a longer and stronger fibre, and this fibre is used to mix with the shorter and more easily made groundwood pulp in various proportions to give it the strength needed for different kinds of paper. The soda process produces a fibre, but it is softer and of a different texture and is used for making book papers and papers having a fine smooth surface. The proportion which such papers bear to the whole industry is small, as may be understood when it is stated that out of a grand total of about 4,500,000 cords of wood used annually in the United States pulp and paper industry only 650,000 cords go into the soda fibre process. Again, out of these 650,000 cords consumed in soda pulp no less than 350,000 cords are made from poplar wood, which produces by far the better fibre when compared with other woods. Pine, beech and maple, in the order named, rank next as raw material for soda fibre, while fir, hemlock and spruce are away down on the list. It will be seen at once that if Canadian soda fibre is to attain a reputation and become a permanent industry it should be based upon poplar wood, and this further reduces the field of such an industry if it is conducted as a means of using up the mill waste of the average Canadian sawmill.

Export Markets Essential

Of recent years a larger proportion of book papers is being made from printed papers that are bleached and used over again, and this helps to reduce the requirements of the raw material. Any large output of Canadian soda plants would have to seek a market abroad for the present, and this brings another problem before us. The present price of chemicals in the paper industry, and especially in the pulp processes, is not merely abnormal but without precedent. The pulp industry in Norway and Sweden is cared for and regulated by the government in those countries to a much greater extent than in any country except Germany, and large investments in any new lines in Canada would want to be assured that the connections with Great Britain, which could undoubtedly be made now to supplant Scandinavian trade, would be continued after the war. No doubt it would be to the economic advantage not only of Great Britain, but of the British Dominions, if the whole Empire could be more self contained, but if this view prevails, then Russia, France, Italy and the other allies will want to share some of these advantages or preferences. But if there was a permanency in such trade arrangements, it would mean a tremendous development in the pulp and paper industries, as well as all others based on wood as a raw material.

Caustic soda is a by-product in the electrolytic bleaching process, and the electrolytic process has revolutionized the manufacture of bleaching powder and soda ash. The success of this depends on cheap water power and convenient transportation. Without doubt there is a great field for this in Canada, war or no war. What it offers now may be grasped from the simple statement that before the war bleaching powder was 1¼c. per lb., while now it varies from 6c. to 10c., and often it is not obtainable at that.

Causes for Canada's Pulp and Paper Progress

Canada has made her great advances in pulp and paper manufacturing because of three prime advantages, first the vast extent of raw material in the forests, second the immense hydraulic power available, and third the native skill of the Canadian people in wood craft. One of these advantages, the cheap water powers, would alone ensure the success of a Canadian electrolytic bleach industry, and then a new era in soda pulp and a further advance in manufacturing paper for export would naturally follow. The initial capital involved would be large, but the results would be proportionately great, because they would favorably influence many industries throughout Canada besides the pulp and paper trades.

The electrolytic bleaching plant at Niagara Falls, N. Y., has been a great success, and the establishment of a large plant in Canada would not only prove profitable in itself, but its existence would provide a more assured basis for a soda pulp industry on a considerable scale, and thereby give greater diversity to the paper industry. A Canadian soda pulp industry is therefore not so much a problem of raw wood, where so much is being needlessly burnt and otherwise wasted, but a problem of cheap chemicals. The devotion of some large water power cheaply developed for this purpose would not only greatly expand the whole paper industry, but would stimulate a large series of other industries in which bleaching and soda products are used.

Fire Brick for Lumbermen

The Elk Fire Brick Company of Canada, Limited, Federal Life Building, Hamilton, Ont., manufacturers of every kind of fire brick, include in their output a number of lines of importance to lumbermen, among them being special lines for refuse burners, boiler settings, kilns, Dutch ovens, etc. The whole problem connected with the production and use of fire brick is entertainingly and well discussed in a booklet issued by the company under the title of "Refractory Efficiency Engineering." The book commences with the first stages of the industry and follows it through to the various finished products, dealing with fire clay, its proportion, blending, etc.; manufacturing, and finally with the marketing of the product. The second part of the book gives an interesting history of the Elk Fire Brick Company and a detailed description of its operations, policy, etc. In addition to the above the book contains an assortment of important information of value to all who are interested in fire brick.

One of the chief points brought out in the book is the fact that the term "high grade" is often improperly used in connection with fire brick. All brands of fire brick, it is pointed out, are "high grade" for some classes of work, because they give better results in one or more places, than other brands. The method of marking does not necessarily entitle them to the term "high grade." This fact places upon the salesman the responsibility of recommending the special varieties best suited for particular work.

Samples of the Elk Brick Company's fire bricks were recently tested by the Department of Mines at Ottawa, and the results showed that they were of high refractory quality and stood severe crushing strain.

TURN YOUR 'WASTE' WOOD TO ACCOUNT

Every Saw Mill in Canada should have a small SODA PULP PLANT to take care of its Slats, Tops, Bottoms and 'Waste' Wood. Contracts for long periods of years can be obtained.

EDGINGS

Ontario

Charles Raysen, Vienna, Ont., is contemplating the purchase of sawmill equipment.

The Toronto Wood Turning Company, 95 Richmond Street West, Toronto, recently lost their plant by fire.

W. C. Edwards & Company, Limited, Ottawa, Ont., have increased their capitalization from $400,000 to $4,400,000.

S. L. Lambert, Welland, Ont., recently lost his planing mill by fire. The loss is estimated at $25,000 and insurance at $8,000.

J. A. Orton, Orillia, Ont., recently lost his planing mill by fire. The amount of the loss is estimated at $7,500, with some insurance.

The Buchanan Planing Mills Company, Goderich, Ont., recently suffered a serious loss by fire. The amount of the loss is estimated at $6,000.

Reid Bros. Company, Fourth Street, Niagara Falls, Ont., have prepared plans and work will start at once on the erection of a mill to cost $2,000. The building will be of frame construction and concrete foundation.

The Robert Quance Company, Limited, has been incorporated with head office at Delhi, Ont., and capital stock of $40,000, to carry on business as sawmillers and lumbermen. The provisional directors are R. Quance, R. F. Quance and M. A. Wilson.

S. A. Hager & Son, 703 C. P. R. Bldg., are open to receive tenders for 1,000,000 feet of common and better 1-in. birch; 1,000,000 feet of common and better 1½-in. birch, and 1,000,000 feet of common and better 2-in. birch. The material is for the Dominion and French governments.

The Beamsville Basket and Veneer Company, Limited, have been incorporated with head office at Beamsville, Ont., and capital stock of $40,000. Those interested are S. G. Near, A. W. Reid and T. Nodwell.

The Western Contracting Company, Limited, has been incorporated with head office at Port Arthur, Ont., and capital stock of $40,000, to carry on business as contractors and manufacturers of lumber and pulpwood. Those interested are W. F. Langworthy and A .J. McComber.

Jacob Kaufman Limited has secured a provincial charter in Ontario with head office at Berlin, Ont., and capital stock of $50,000, to carry on business as woodworkers, lumbermen, etc. The provisional directors are J. Kaufman, M. R. Kaufman, M. Kaufman, A. R. Kaufman and E. L. Kaufman, all of Berlin.

Eastern Canada

The sawmill belonging to Gaudias Maurice, St. Camille, P. Q., was recently destroyed by fire, incurring a loss of $3,000, with no insurance.

Plans are being prepared by the Belgo Canadian Pulp and Paper Company, Shawinigan Falls, P. Q., for the erection of a paper mill at that place.

The Montreal Harbor Commissioners, Common Street, Montreal, P. Q., have awarded a contract for fir timber to Mason & Company, 80 St. Francois Xavier Street.

Western Canada

The Manning-Sutherland Lumber Company, Calgary, Alta., have opened a yard at Bawlf, Alta.

The Arctic Lumber Company, Limited, has been incorporated with head office at Edmonton, Alta., and capital stock of $10,000.

The Warren Timber Company, Limited, has been incorporated with head office at Vancouver, B. C., and capital stock of $125,000, to carry on business as manufacturers of and dealers in lumber, shingles, etc.

The Athabasca Power Company, Limited, has been incorporated with head office at Winnipeg, Man., and capital stock of $100,000, to carry on business as manufacturers and dealers in lumber, timber, logs, etc.

A new sawmill has been completed at Qualicum Beach, Vancouver Island, B. C., by the Qualicum Beach Lumber Company, who own a large amount of timber and intend to commence cutting operations immediately.

The Diamond Lumber and Shingle Company, Limited, has been incorporated with head office at Vancouver, B. C., and capital stock of $15,000, to carry on business as timber and lumber merchants, sawmill and shingle mill proprietors and to manufacture and deal in sash, doors, etc.

The Columbia River Lumber Company, Golden, B. C., have started logging operations after having been shut down for about six weeks. They report plentiful orders from the Prairie Provinces for all grades of lumber, for use principally in the construction of farm buildings. The company will employ 300 men during the present year.

The Sydney B. Smith Lumber Company has commenced to build a sawmill and planing mill near Lombard, B. C., a mile west of Bradner on the

B. C. E. R. It is expected that cutting operations will commence about April 1st. The plant will be electrically driven with power furnished by the B. C. E. R. The plant will have a capacity of from 50,000 to 75,000 feet per day. The company have secured timber which it is estimated will last them for six to eight years.

The Cargo Shingle Company has been registered under the Companies Act in B. C. and authorized to carry on business as an extra-provincial company within the province. The head office for the province is at 739 Hastings Street West, Vancouver, and M. D. Rector is attorney for the company. The head office of the company is at 14th Street Dock, Everett, Wash. The company's capital stock is $40,000. The objects of the company are the manufacturing and sale of shingles.

W. K. Nichols, manager of the Ladder Lake Lumber Company, Big River, Sask., reports that the outlook for the present year's business is excellent. The company's planing mill is now running, and two camps are being operated at Crooked Lake, employing from 200 to 250 men. Logging conditions have not been good during the past few months owing to the great depth of snow and the excessive cold. However, the company have an extensive supply of logs on hand left over from the previous year. The sawmills at Big River are expected to be running night and day this year at full capacity.

Thos. Meredith, of New Westminster, B. C., managing director of the Canadian Pacific Lumber Company, has leased the company's mill at Port Alberni, B. C., to Seattle mill men. The deal involves the purchase of 250,000,000 feet of fir and cedar logs. The lessees are H. A. Dent, of the Dent Lumber and Shingle Company, and A. W. Mylroi, of the Anchor Supply Company. The mill has a capacity of 100,000 feet per day and Mr. Dent states that it will operate to its capacity from the middle of March, giving employment to 200 men. It is reported that the price paid was $250,000. The idea of the lessees is to cater to the Alaskan and northern trade. The company has already commenced to ship out lumber which was on hand when the transfer took place.

The reorganization of the Ocean Falls Company, Limited, at Ocean Falls, B. C., is being rapidly completed, and it is expected that a busy city will shortly be brought into existence at Ocean Falls, as a result. The plant has been taken over by the Pacific Mills, Limited, capitalized at $9,500,000, of which $2,000,000 is to be issued in 6 per cent. preferred shares and $7,500,000 in common shares, with a bond issue of $3,000,000. J. H. Lawson is president, W. S. Lane secretary, and the Board of Directors is composed of N. R. Lang, S. D. Brooks, W. S. Lang, R. R. Parker and J. H. Lawson, all of Vancouver. The Crown-Willamette Paper Company, of Portland and San Francisco, is also largely interested, also the Ocean Falls Company, Limited, as bond holders. Arrangements are now being made for the erection of a paper mill in addition to the pulp mill. The present plant, including a pulp mill and sawmill, are to be much improved. The Ocean Falls Company, Limited, was incorporated in 1910 and its pulp mill and sawmill were operated for a time. Three years ago the company went into the hands of receivers and the deal for reorganizing was completed a few months ago.

Messrs. P. Payette Co. of Penetang, Ont., have recently made a number of installations in different mills in the country of their Lath and Bolter machines, three of the most recent ones being for McFadden and Malloy at Spragge, Ont.; Wm. Milne & Sons of North Bay; and the Bonnechere Lath and Picket Co., Ltd., at Golden Lake. They have also recently built a 2 ton pulley, 36 in. face for a new main drive in Manley Chew's Midland mill, supplying as well all the coupling boxes and shafting.

A deputation of the members of the Mountain Lumbermen's Association recently waited upon Hon. Wm. R. Ross, Minister of Lands and Forests for British Columbia, to urge that he continue the work done by the Department in developing the markets for British Columbia timber and lumber. The members of the deputation were W. F. Lammers, W. Mark DeCew, W. A. Anstie, and Neil Murray. The deputation also called upon A. W. Pineo, chairman of the Workmen's Compensation Act Commission for British Columbia, in order to acquaint him with their views in regard to the working of the act.

A report from Portland, Oregon, states that, for the first time in ten years, operators on the Pacific Coast have now no fear of overproduction, even with all mills running on a ten hour day. A Washington mill has recently received an order from the Burlington Railroad for stringers, at a price a little more than double what was paid last year. Today, quotations on the three grades of logs in the Puget Sound, Grays Harbor and Columbia River markets are $7, $10 and $13, the highest, it is said, in ten years. The only handicap in connection with the whole business is the lack of bottoms for water shipment. Quite an important factor in keeping the volume of production during the present year will be the recent destruction by fire of the Inman-Poulson mill at Portland. This mill had a daily output of 360,000 feet.

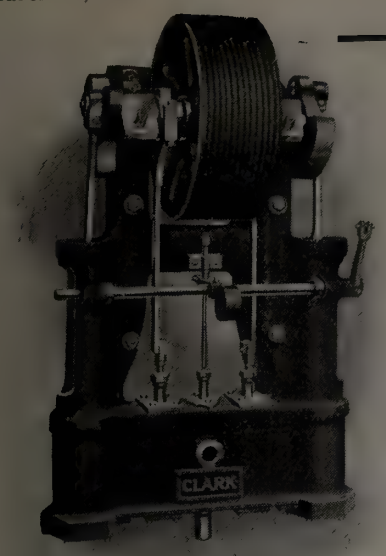
Stops Bleeding

There's a sample of Douglas' Egyptian Liniment awaiting your request. It's free—absolutely free—along with literature explaining the manifold uses to which it can be put.

No person or animal need bleed unnecessarily where Douglas' Egyptian Liniment is kept. It staunches bleeding immediately.

In cases of toothache, sore throat, neuralgia, rheumatism, etc., it effects immediate relief. In the stable its use is invaluable for thrush, cuts, spavins, calluses, etc.

Send at once for your free sample.



The Clark Twin Engine Feed for Sawmill Carriages

BUILT WITH THE FOLLOWING SIZE CYLINDERS:

Dia.	Stroke	Weight
10″	14″	5100 lbs.
12″	16″	7100 lbs.
14″	18″	11700 lbs.
16″	20″	12700 lbs.

The cylinders and frame are cast in one piece. The crossheads are cast steel with adj. shoes. Valve chests are lined with removable bushings. If you want perfect control of your carriage when feeding slow or if you are sawing long logs you should use this type of feed. It also uses 50 per cent. less steam than the direct shot gun type of feed.

Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

W. W. Cory,

Department of the Interior, Ottawa,
December 20th, 1912.

Deputy Minister.

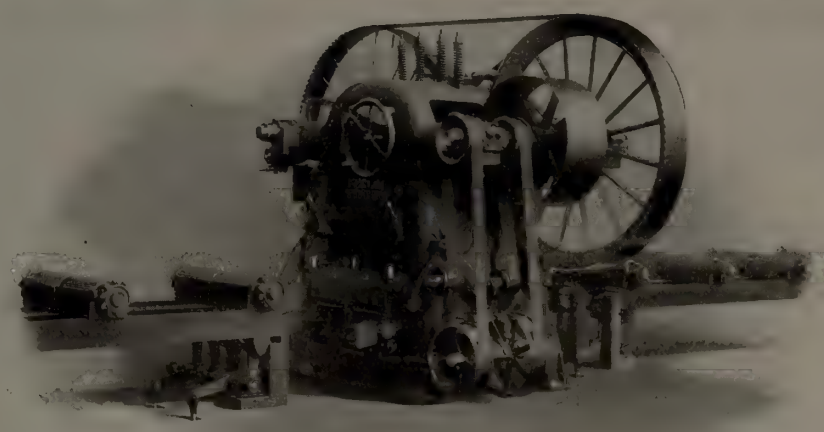
One Man or Three?

Figure the labor cost of operating your head rig—wages of Head Sawyer, Carriage Setter and Carriage Rider—compare with that usually paid the operator of a Berlin Horizontal Sawmill Resaw and settle in your own mind whether or not it pays to cut a log to its last board on the head rig.

Your head sawyer is one of the highest priced men in your employ. Why load him up with work that a lower priced man can do just as well and from two to three times as fast? The duty of the head rig—an expensive but indispensable unit—should not go beyond the actual work of opening up the log and cutting to grade. After that every cut it makes is a direct loss to you.

Berlin Heavy Duty Horizontal Resaws

Make Better Lumber at Less Cost



Made in 5-ft., 6-ft., 7-ft. Wheel Sizes.

Steam, Air, Hydraulic or Hand Bed Adjustment.

Many mill men have fortified themselves against unnecessary operating costs by installing these Horizontals to assist their head rigs.

Cants, planks, deals, slabs, or even half logs fed to them are cut into perfect lumber at from 100 to 225 lineal feet per minute.

The head sawyer has greater opportunity to secure the best from each log. Head rig cutting lines are reduced at least one-half, and mill output increased from 35% to 50%.

A request on your firm's letterhead brings additional information on this modern method. **Ask for the "H Series Booklets."**

A New Book

Illustrating and describing in brief and comprehensive manner the best ideas on every type of Band Sawing Machinery has lately been published and called

"Wisdom Teeth"

When writing for the "H Series Booklets," let your letter include a request for "Wisdom Teeth."

AJAX Is Made To Meet Your Conditions

and we have yet to hear of a case where it has not successfully met the service for which it was made and recommended. Made of the best quality steel—with the strong powerful and ever holding lap-weld—tested and certified—it satisfactorily performs the most severe service.

AJAX Loading Chain

is used by the great majority of lumbermen everywhere—the best proof we could submit that it is the best chain made.

Specify AJAX—get the best.

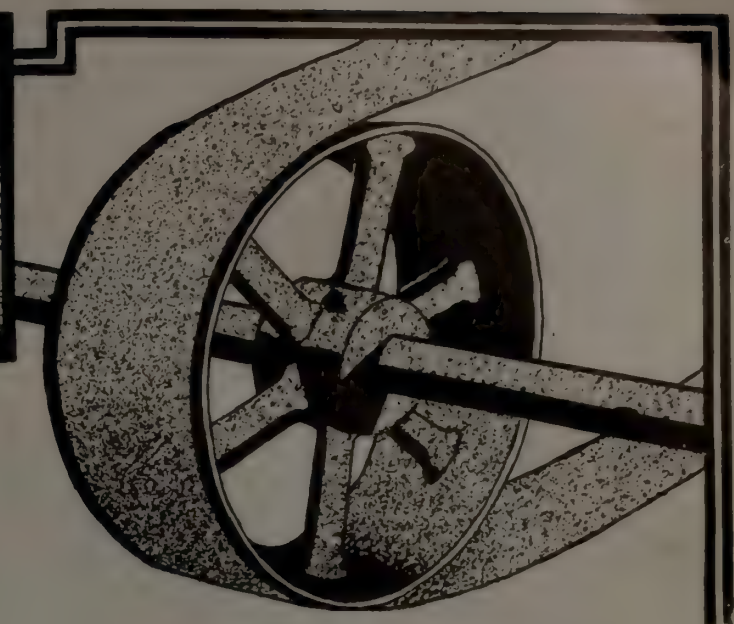
When You Overhaul Install

GOODHUE BELTS



"Acme Waterproof" Leather Belting

This brand is especially well suited to the wet places in a saw or pulp mill and will run true as long as it is in service. When you are overhauling your mill equip it with "Goodhue Belts" and you will never regret it. They are honestly made of solid leather—every inch a good belt and they won't stretch.

TRADE MARK

Reg. in U. S. Pat Office

Labor Saved Is Time Saved

When to this is added increased durability we have the economy that naturally results from larger output and long service.

These are some of the strong points in favor of

Disston Cross-Cut Saws

They are ground to a true taper all the way from cutting edge to an extra thin back. Being ground on lines that conform exactly to the breast of the saw, the blade is absolutely uniform in thickness throughout the entire length of the cutting edge. This special method of grinding gives the maximum amount of clearance with the minimum amount of set, without sacrificing elasticity and stiffness. You know that all these points are good points, and substantiate our claim that Disston Cross-cut saws are unexcelled.

You will find a lot of valuable information in our Cross-Cut Saw Booklet. Sent free on request

Cheapen the Cost of HAULAGE with NATIONAL TRUCKS

NATIONAL Worm Drive Trucks are made in the largest Motor Truck Plant in Canada. The design is the product of our own Engineering Department, and is the result of the most searching investigation of the requirements of Canadian roads and conditions. The materials used in NATIONAL TRUCKS are the same as specified by the British War Office in ordering Trucks for war purposes.

Lumber Companies will find NATIONAL MOTOR TRUCKS the most economical for hauling logs, dressed or rough lumber, and other products of the industry. Four models to suit every condition. Capacities of Trucks are 1,000 lbs., 1,500 lbs., 4,000 lbs. and 7,000 lbs.

Our Traffic Engineers will present facts and figures that will prove the economy of NATIONAL MOTOR TRUCKS in comparison with other methods of hauling.

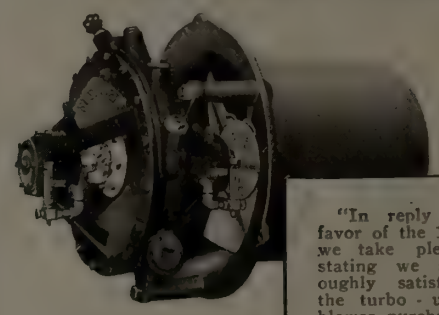
Address communications to Columbus

A Lumber Company Burns Shavings Successfully



"In reply to your favor of the 11th inst., we take pleasure in stating we are thoroughly satisfied with the turbo-undergrate blower purchased from you. We have no trouble at all, keeping up steam, burning nothing but shavings mixed with coal dust. We have been able to cut our fuel cost to a minimum and consider your blower a very good investment." (Name on application)

Here's a letter we received from a lumber company.

It speaks for itself.

Sturtevant Trade Mark — **Turbo-Undergrate Blowers**

have proved successful on account of correct design and careful construction.

The turbine is not a makeshift—It is a real turbine built similarly to our large standard machines. It has generous bushings bearing—fitted with oil rings and large reservoirs. Oil is required very infrequently—no ball bearings to crack or give trouble. Get catalogue 214-C.

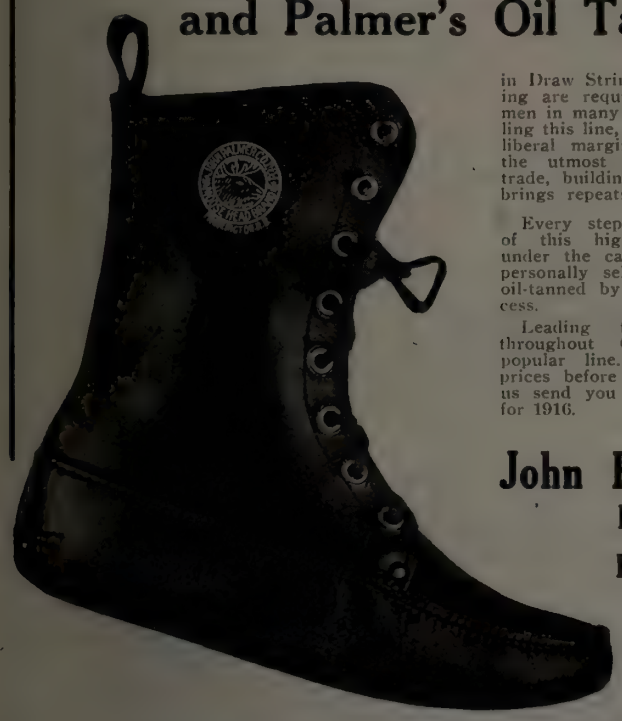
Merchants! Share in Our Big 1916 Sales

Every year sees a heavy increase in sales for the genuine Palmer's Oil-tanned, waterproof footwear. Our fine new plant has been the outgrowth of the demand we have created by A1 quality, and we are now ready to cope with record sales for 1916.

"Moose Head Brand" and Palmer's Oil Tans



in Draw Strings and Regular Sewing are required by thousands of men in many walks of life. Handling this line, you not only secure a liberal margin of profit but give the utmost satisfaction to your trade, building the reputation that brings repeats.

Every step in the manufacture of this high-grade footwear is under the care of an expert; we personally select all leather used, oil-tanned by our own secret process.

Leading footwear jobbers throughout Canada handle our popular line. See samples and prices before placing orders. Let us send you our free booklet L., for 1916.

John Palmer Co.
Limited
Fredericton, N.B.

(Canada's Largest Manufacturers of Oil-Tanned Footwear.)

Don't Blame the
FIRE BRICK

if it fails to give satisfaction. More likely than not you have been using the wrong kind for your particular purpose. A firebrick intended for use in a small hand-fired boiler may not give the same result if used under high pressure boiler with mechanical stoker.

So when sending us your enquiries be sure to specify for what purpose these brick are to be used.

You are sure then of a high quality brick, that is absolutely the best for your purpose.

We Manufacture the Following Well Known Brands

"Elko," "Elk Steel," "St Marys," "Keystone" and "Rotex"

Catalogue is yours for the asking.

EST. 1880 "FACTS FIRST"

James D. Lacey & Co.

EXPERIENCE : RESOURCES : PRECISION

Shall Stumpage be an INVESTMENT, a Speculation or a "Gamble?"

All investment in timberland, unless for immediate logging operations is, technically speaking, speculation—because profits depend on Increase in value. All good timberland is steadily and rapidly appreciating in value, so that the only thing which stands between the investor in timberland and a sure profit is the question as to whether a tract actually contains the stumpage on which the purchase price is based.

The best "cruising" of timber after the old-fashioned method (or non-method) introduces a factor of possible error so great that the purchase often becomes nothing short of a "gamble." Everyone knows of case after case where a buyer has met heavy losses—often without any intent to deceive on the part of the seller.

A full LACEY REPORT on a timber tract, made on the internationally-known and essentially scientific LACEY system, which we have been 36 years in developing, removes the last vestige of "gamble" from any timber transaction (whether carried through under our auspices or not) and smoothes the way for both buyer and seller.

Canadian Made Locomotives

There is no need to go outside of the Canadian market in order to obtain the best logging locomotives. We have been specializing in this line for fifty years. You will find the design of our locomotives complete and the sturdy construction equal to every test of the severe service of logging operations.

Repair parts can always be had on the shortest notice.

This engine is 13½ ins. x 18 ins. and weighs 35 tons.

Grey Iron Castings—any size or shape—ordinary or intricate—made promptly. New foundry, splendidly equipped We would be pleased to quote on castings—singly or by contract. We also make drop forgings of all descriptions.

LOGGING LOCOMOTIVES

The designs of our Logging locomotives are the result of wide experience, extending over a period of 80 years.

The material used in their construction is thoroughly tested and is the best of its kind.

All details are accurately finished to standard gauges and are absolutely interchangeable on all locomotives of the same class and size.

This cuts out long delays at critical times of the work, as parts liable to wear can be kept on hand or shipped promptly from our works.

ATKINS

There is a distinct advantage in using **Atkins Segment Ground Cross Cut Saws.**

You will realize this fact when you try them.

By actual test we are cutting 25 per cent. more timber with least cost for refitting. Let us send you our book "C.L." Write for it to-day. ATKINS PERFECTION No. 5 and No. 69 EUREKA FALLING SAWS are the most popular Saws in Canada to-day. Send us your name for further information. Let us tell you what these Saws are doing. Then you can use your own good judgment later on.

Canada Lumbermen

Have learned from experience that "ASBESTOL" Gloves and Mittens serve their purpose better than any other work gloves on the market.

Made from the best selected leather,

EISENDRATH'S Celebrated Horse Hide,

by skilled workmen, these famous work gloves and mittens are proof against the effects of heat, steam and water.

Make sure of the "ASBESTOL" trade-mark the next time you buy work gloves. Most good dealers know "ASBESTOL" and carry the line.

Eisendrath Glove Company

Canyon Lumber Company, Everett, Washington

Plymouth Cheaper in the End

In July, 1913, the Canyon Lumber Company of Everett, Washington, wrote us:

> "We use Plymouth D Ship 200 thread lathyarn for tying up our Kiln Dried finishing lumber, such as flooring, Ceiling, Drop Siding and special stock. We use this for the reason that it goes further to the pound than any other lathyarn we have found, and while we could get 200 thread lathyarn for less money, we find that your yarn is cheaper in the end."

Today this concern still prefers Plymouth Lathyarn, using it on both lath and finishing lumber and taking about a ton every six weeks.

Plymouth Lathyarn gives more ties than any other for the same money. And it's always the same. Try it.

PLYMOUTH CORDAGE COMPANY
NORTH PLYMOUTH, Mass. WELLAND, Ont.

INDEPENDENT CORDAGE CO., LTD.
TORONTO, ONT.—CANADIAN SALES AGENTS

P. S.—This same company uses Plymouth Manila Rope around booms and mills.

Not altogether what we say but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

THE E. LONG MANUFACTURING CO. SAW-MILL MACHINERY ORILLIA, CANADA

THE E. LONG MANUFACTURING SAW-MILL MACHINERY ORILLIA, CANADA

Iron Saw Frame

For a simple, substantial machine that will stand up under long service and a heavy lumber production, we have no hesitation in commending the machine herein described and illustrated, as having made good under the severe tests of actual service.

Note particularly the simplicity of design, the accessibility of every part, and the full adjustment provided for.

The frame, or bed, of the machine is made in a single casting of the hollow box section, heavily ribbed and absolutely rigid. This facilitates the installation of the machine and insures a proper relation of parts being maintained. All the parts of the machine rest on planed surfaces and are bolted through the top of the bed casting. To get at these bolts, large hand holes are left on the inside of the machine; one of which can be seen above.

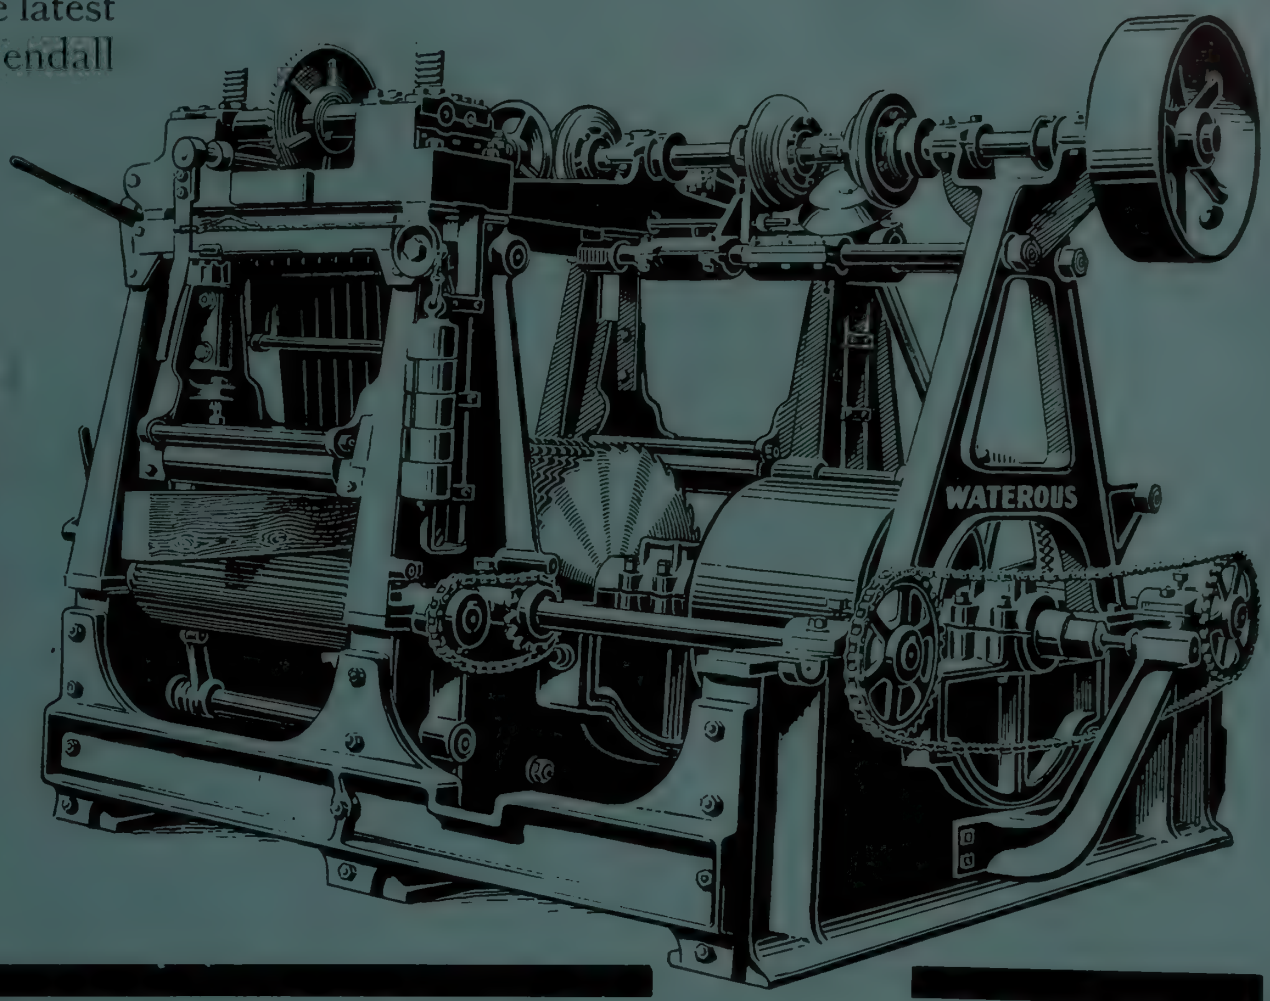
A New Machine That IS New

This illustration shows the latest development of the Kendall Circular Gang.

It was completed in our shops on October 1st, 1915, and is the last word in Circular Gang design.

It takes cants from 4" to 12" thickness and at the rate of from 2500 to 3000 a day, will turn them into lumber, perfect in finish and cut evenly from end to end. Big capacity on small stuff and lumber cut better than is possible on Band Saw, Circular Saw or Vertical Gang distinguish this machine.



The 1916 Model Kendall Circular Gang

The Kendall Circular Gang has come to stay. It meets the demand for a machine that will turn small logs into merchantable lumber economically. Those already in use though of old design have proven its worth.

These earlier models are still being built and sold. They are good machines—*but there is a better.*

The 1916 Model Kendall Gang built under the supervision of Mr. I. N. Kendall, from new drawings, and new patterns, incorporates *absolutely original features* found in none of the older design machines now being manufactured elsewhere.

While all the good points of previous models are retained, such weaknesses that use has made apparent have been eliminated. The new features and better construction of this 1916 Kendall Gang mean an appreciable increase in capacity, in nice cutting ability, and in safety, convenience and sturdiness.

This *latest* development of the Kendall Gang patents is built in a shop that has specialized in high class machinery construction — that has built machinery for Canadian sawmills for more than 50 years. Our reputation is a guarantee that this New Model Kendall Gang is built as it should be.

When you investigate the Circular Gang question see that you get facts and figures of the "WATEROUS BUILT" Kendall Gang—the new machine that IS new.

"FROST KING" METAL

Our thirty-five years experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 30c per lb., Fort William and East; West of Fort William 35c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our FAULTLESS BABBITT will stand where all other metals will fail. Price, Fort William and East, 40c per lb.; West of Fort William, 45c, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

FOR SALE: Machinery and Timber

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the town of Parry Sound, Ont.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Special bargains in the townships of Burpee, Falconbridge and Street for small mills.

We have the following Sawmill Machinery for sale:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand miH.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

All of the above open for inspection at Parry Sound.

Our Yards are Unequalled for Drying Lumber

To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

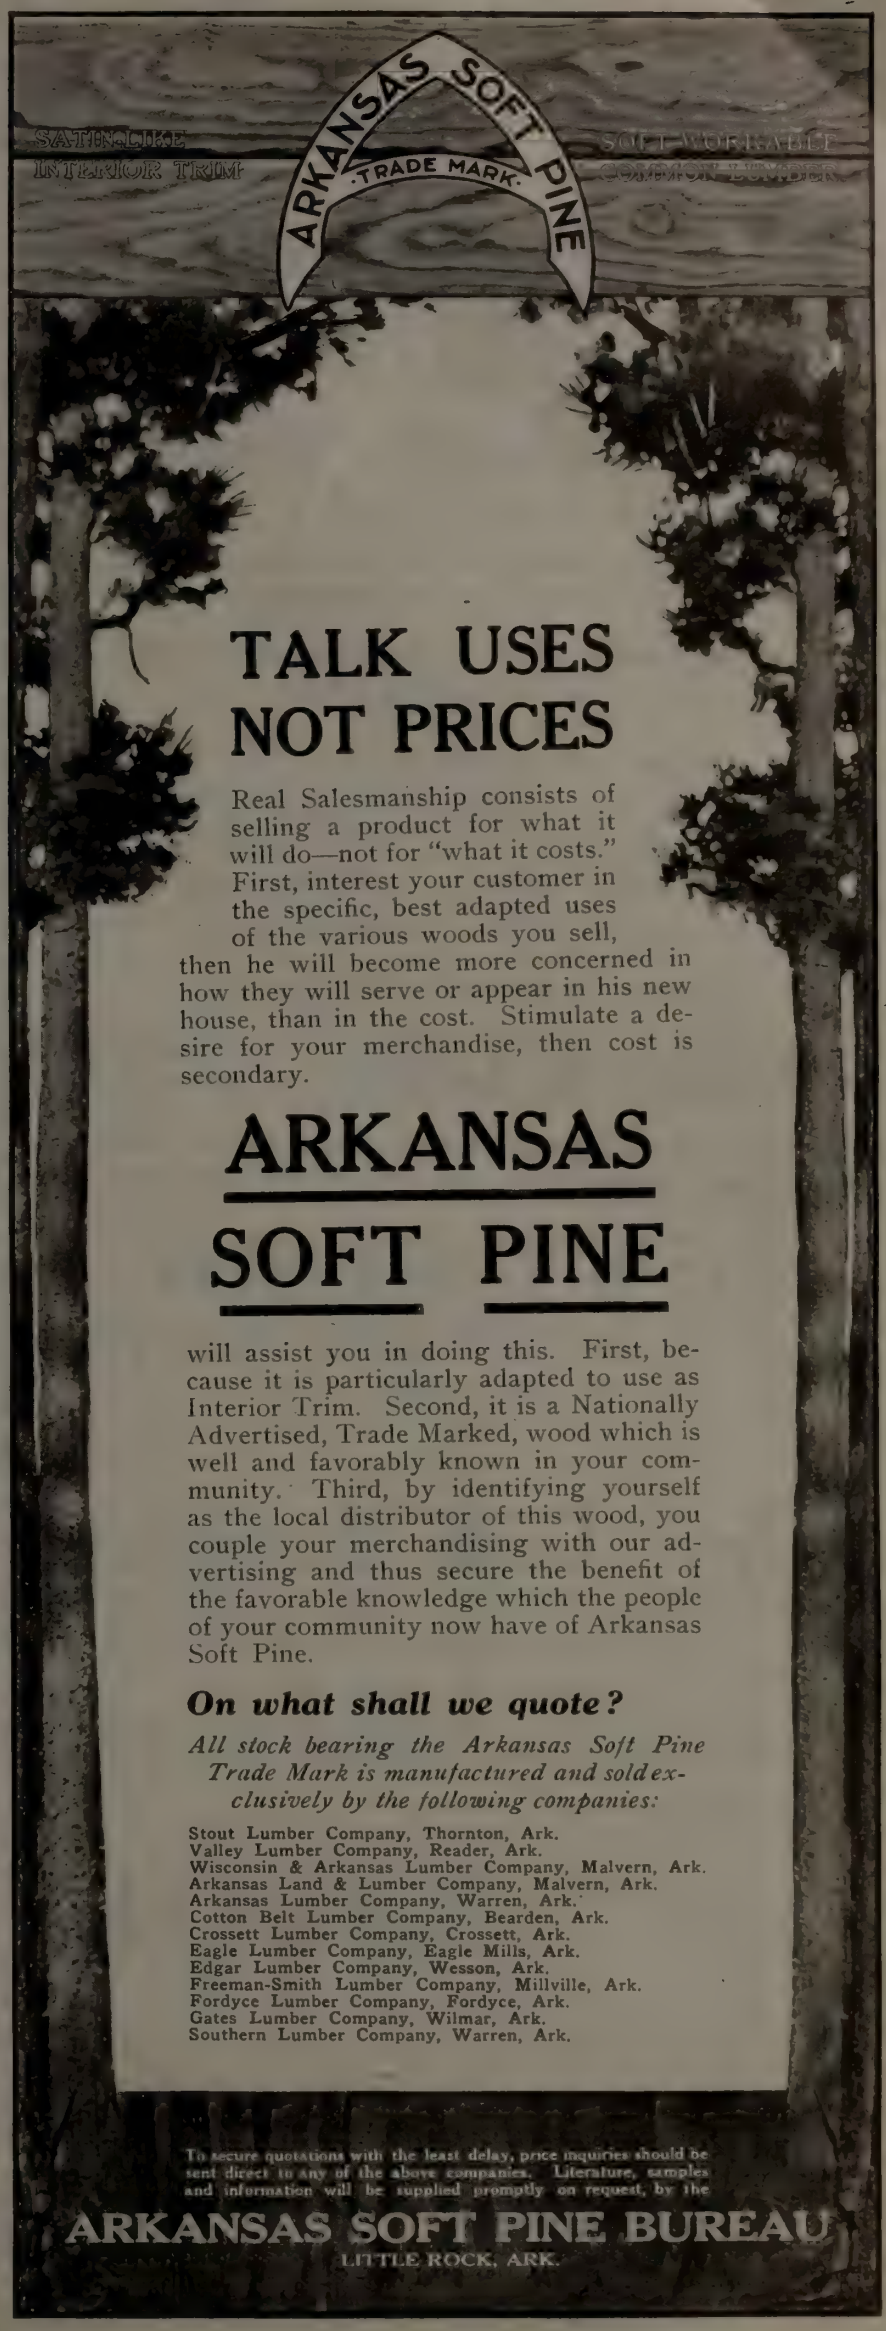
Box 307

Canada Lumberman & Woodworker

Toronto, Canada



TALK USES NOT PRICES

Real Salesmanship consists of selling a product for what it will do—not for "what it costs." First, interest your customer in the specific, best adapted uses of the various woods you sell, then he will become more concerned in how they will serve or appear in his new house, than in the cost. Stimulate a desire for your merchandise, then cost is secondary.

ARKANSAS SOFT PINE

will assist you in doing this. First, because it is particularly adapted to use as Interior Trim. Second, it is a Nationally Advertised, Trade Marked, wood which is well and favorably known in your community. Third, by identifying yourself as the local distributor of this wood, you couple your merchandising with our advertising and thus secure the benefit of the favorable knowledge which the people of your community now have of Arkansas Soft Pine.

On what shall we quote?

All stock bearing the Arkansas Soft Pine Trade Mark is manufactured and sold exclusively by the following companies:

Stout Lumber Company, Thornton, Ark.
Valley Lumber Company, Reader, Ark.
Wisconsin & Arkansas Lumber Company, Malvern, Ark.
Arkansas Land & Lumber Company, Malvern, Ark.
Arkansas Lumber Company, Warren, Ark.
Cotton Belt Lumber Company, Bearden, Ark.
Crossett Lumber Company, Crossett, Ark.
Eagle Lumber Company, Eagle Mills, Ark.
Edgar Lumber Company, Wesson, Ark.
Freeman-Smith Lumber Company, Millville, Ark.
Fordyce Lumber Company, Fordyce, Ark.
Gates Lumber Company, Wilmar, Ark.
Southern Lumber Company, Warren, Ark.

To secure quotations with the least delay, price inquiries should be sent direct to any of the above companies. Literature, samples and information will be supplied promptly on request, by the

AN UNLIMITED MARKET

A LESSON OF THE WAR

IMPERIAL Trade! Have you given this phase of the World-War consideration The recent action of Sweden regarding the Export of Wood Pulp to the United Kingdom has roused British interests to look to Canada for a greatly increased supply; the demand for Canadian Wood Pulp will increase in the same ratio to the supply and every Saw Mill in the Dominion should have a small SODA PULP PLANT to take care of its Slats, Tops, Bottoms and "Waste" Wood. Contracts for long periods of years can be obtained. For full information apply—

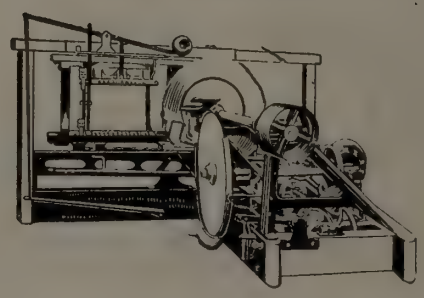
"Dunbar" Shingle Machine



The "Dunbar" Shingle Machine works smoothly and swiftly, producing shingles of uniform cut at a low cost.
Users of the "Dunbar" Shingle Machine testify to its strength and reliability.
Specifications are 2 38 Shingle Saws and 1 36-in. Jointer Saw. Speed, 1,600 r.p.m. Capacity 16,000 to 30,000. Weight 2,800 lbs. Main Arbor, 2 7-16 in. Poilshed Steel. Adjustable ratchets. Boxes Ring-oiling.
The "Dunbar" Shingle Machine is made in two models, "A," having Jointer Saw driven from counter shaft or line shaft, and "B," having Jointer Saw driven by a leatherboard friction, which makes it self-contained.
Write us in regard to your Shingle Mill requirements.
We also make Sappers, Cedar Cut Offs, Lath Machines, Car Wheels, and Castings of all kinds.
We will gladly supply you with information and prices.

DISSTON SAWS

have been made from steel made by us in our own plant since 1855. More than sixty years experience in the manufacture of saw-steel coupled with a study of operating requirements extending over three quarters of a century have resulted in saws of highest excellence.

In tension—, set—and edge-holding qualities Disston Saws are as near perfection as the world's foremost saw-makers can make them.
